路献新．

STAR GUARD
You can tell it's almost Christmas. Even the aliens are getting into the festive spirit and seeking out exciting new gifts. Trouble is these "gifts" are space pods and they belong to Apple owners. Can you stop the aliens getting their tentacles on them?
ALIEN CHASE
Catch those runaway aliens on your BBC model B. But you will have to
be quick. These little green men are pretty nippy!
YACHT II
Too many aliens so far? Well this game will bring you back to earth. I's a version of that popular dice game, Yahtzee, written specially for the 2X81 with all the challenges of the real thing built in.

SPACE ROLLER
Different - that's the word for this Spectrum spectacular. It involves little man painting white lines and heat seeking missiles. Yes really! Try it out and you'll see what we mean. GRANNY Will Granny find someone to help her across the road? Will she avoid a ducking on the way to the post office? Will she collect her pension? All these questions and more will be answered by Pet owners. HUNGARIAN HEX.

52
You thought Hungarian Squares was difficult. Well it was nothing compared to this brain-twister for the TI 99/4a. It's got colourful rings of confusion just to baffle you...
AIRLOCK
56
Can you escape from a nuclear reactor about to go critical? Failsafe devices are sealing off the building rapidly and you must find the quickest way out - as one door shuts another opens in this race against time the Atari 400/800.
DOGFIGHT
62
Bandits at 12 o'clock skipper, and they are coming out of the sun! It's chocks away for an exciting version of this arcade game for the Vic-20.
GLUTTON

Bright Sparks
Electronic toys and games are already eating their way into the prime commercial TV time slots in anticipation of a bleeping burping bumper Christmas.

From radio-controlled wonder cars to an abundance of gamesplaying time pieces, we take a buyers' look at how to approach this booming market. What to watch out for, what prices you should shop around to get and some of the best buys in each category.
Read it before you plan your stocking fillers this Christmas. It starts on page 85.
Also included in our Christmas Stocking section is a rundown of the chess machines you could buy this Christmas. How they compare with each-other and with the chess programs you could buy for a home computer.

## TONIC FOR <br> THE TROOPS

Dear Sir,
I am at present serving in the Falkland Islands, working out of Port Stanley.
We are trying to get a computer club started in the evenings to try and eliminate some of the boredom of offduty hours. At present we have limited facilities - 2 ZX81 Sinclair computers and no recognised instructors.
Could I therefore ask you for some back issues of your magazine to assist us with our club, plus any other information/leads that may be of use to us?
SSgt Brown
30 FD SQN R.E.

## BFPO 666

Editor's reply: Those back numbers are at this moment winging their way to you SSGT Brown. We hope they'll be useful in setting up your club.

## ADVENTURER NEEDS HELP!

Dear Sir,
I would like you to print this letter because if so it will hopefully - provide me with an answer to a question that has been niggling me for months. It concerns the game Ulysses and the Golden Fleece produced by On-Line Systems.
So far, for three frustrating months I have been plodding around the opening scenario without proceeding on to the second stage. I have tried everything, wandered round the forest for the day, pounding the shopkeeper with questions, threatening the guards with death mine! - and still have not got into see the King.
So please, please, I beg, any Apple owner out there
with the game and who have passed the first stage, please write into Computer and Video Games as soon as possible. Thank yout I wait eagerly.
Keep the Apple games coming - Imphotep and Alien Lemmings were excellent.
Michael Tallent,
Langport,
Somerset.

## BOMBED OUT BOMBER!

Dear Sir,
I have just received the September issue of Computer and Video Games and I have typed into my 32 K Atari 800 the program called Bomber only to find that it did not run. The program has been written or converted in such a way that it will only run on a 16 K Atari.
I have converted it so it will run on any memory size Atari. First add lines
0 GRAPHICS 0 :REM CLEAR SCREEN.
$8 \mathrm{DL}=\operatorname{PEEK}(560)+$ 256*PEEK(561) :REM (Find number of top left screen location. This varies with different sizes of memory).

Then change lines 10,70 , $80,130,190,250,310,440,450$, $500,560,630,690,910$ and 1030.

In these lines you will find the numbers, 15745,15764, 15923, 15943, 15965, 15983, 16003, 16183, 16205. Change these numbers to: 15745 TO DL +353 , 15764 TO DL+372, 15923 TO DL+531, 15943 TO $\mathrm{DL}+551,15965 \mathrm{TO} \mathrm{DL}+573$, 15983 TO DL+591, 16003 TO $\mathrm{DL}+611,16183$ TO DL+791. 16205 TO DL+813. G. A. Ferguson, Darlington, County Durham.

## POKEING THE TRS-80 <br> - .

Dear Sir,
Here are some pokes for the TRS-80. I found them in the Basic Programmers Notebook by Earl R. Savage.
POKE 16396,23 - disables break key.
POKE 16396,201 - enables break key.
POKE 16396,165 - replaces break with shift break. Bypass 1 for printer. 10 POKE 16422,67:POKE 16423,0.
Line 10 causes the TRS- 80 to automatically bypass all the statements which address the printer.
Bypass 2 for printer 20 POKE 16414,141:POKE 16415,5.
Line 100 is the screen bypass. Line 200 resets line 100. 200 POKE 16414, 88:POKE 16415, 4
The book has many more 'tricks' for the TRS-80, I recommend it
Sunil Parekh,
Eccles,

## Manchester.

## PLEASE, LET'S STAY SHARP

Dear Sir,
I have become rather disturbed of late by what seems to me to be a running down of interest in the Sharp MZ-80K both in advertising and articles on this splendid machine.

You have featured the MZ80 K in the Hardcore section,
but really this is preaching to the converted and is of no use to someone who is already an owner.
I wonder it any of your readers would be able to supply games converted from another format? I am particularly interested in the 747 Simulator, which is only available for TRS-80 -Genie owners.

In conclusion, I realise that you cannot provide listings for every machine every month, but it does seem that a lot of space is taken up with new machines i.e. Spectrum and BBC etc and no doubt we will be flooded with Dragon articles. Please remember that there are specific mags for these machines, and people such as myself depend on you, in the absence of a Sharp Users magazine.
J. D. Carson, Lurgan,
Co. Armagh
Editor's reply: You are in luck Mr Carson, a letter came into our office the other day from a group of people who are considering starting up a Sharp users magazine. The subscription rate would be between $£ 4$ to £6 and the magazine would be bi-monthly. The person to contact is Mr J. P. Griffiths, 104 Waterloo Road, Southport, Merseyside. And may we respectfully remind you that some of the best games we have published - for instance World Cup Manager - have been written for the Sharp.

## RATTLE AND <br> ROLL!

Dear Sir,
A simple technique for gamesters and their ZX81's add to the effect of an explosion to produce results similiar to an earthquake scene on TV - the jolted camera shot - get it?
By POKEing location 16424 you can cause the picture to judder in an alarming way the higher the value the more alarming it gets - my program demonstrates this. 10 PRINT AT 10,10 ; "- $\square \square$

## 20 FOR $N=50$ to 0 STEP -

 530 POKE 16424,N
40 POKE 16424, $(50-\mathrm{N})$
50 NEXT N
60 GOTO 10
D. Beighton,

Silchester,
Reading.

## CHARACTER PROBLEMS

Dear Sir,
Could you please tell me how you get lower case
characters printed on the television screen using a Vic20. I have tried desperately but to no avail.
Alan Clarkson,
Warrington,
Cheshire.
Editor's reply: All you have to do Alan is press the
SHIFT key and the key with the Commodore symbol on it - you'll find that at the bottom left-hand corner of your Vic keyboard - at the same time. Then you'll find both upper and lower case characters are available.

## MISLEADING MEMORIES

Dear Sir,
I wonder if any of your correspondents or staff have been slightly misled, as I was, by some advertisements for microcomputers, as far as the available RAM is concerned. I purchased my Atom as much for its expansion possibilities as anything else, but I also felt that 2K of RAM was a fairly
generous offering for starters.
I soon discovered that 1 K of that RAM is in zero page and dedicated to the operating system, except for a few odd bytes. Another $\lfloor\mathrm{K}$ is the screen memory, leaving just $\lfloor\mathrm{K}$ for program textl Even with the Atom's fairly compact abbreviations fitting a reasonable game into 512 bytes is rather frustrating. I now have a full expansion for the lower text space, but for several months the frequent appearance of ERROR 248 was a cause of much tearing of hair and gnashing of teeth!

I wonder, when I see adverts for some of the latest machines, such as the Spectrum (48K) or the Dragon (32K), just how much of that RAM is directly available to the user for program text. Perhaps your Hardcore article could publish a comparative table sometime. Richard Gledhill,
Bicester,
Oxfordshire.

## THE MICRO CONFLICT

Dear Sir,
I felt I just had to write to you and your fantastic magazine, and have a short say in the ZX Spectrum versus the BBC model A conflict.

As tar as 1 am concerned, the Spectrum is one of the greatest achievements in the computing industry. If I were to give you about $£ 350$ and also the choice of buying a BBC model A micro at $£ 300$ or a 48 K Spectrum, costing a mere £175, a ZX microdrive at $£ 50$, a ZX printer at $£ 60$, an RS232 at only $£ 20$ and if you wanted a proper keyboard at about $£ 40$, which would you take?

I think the choice is obvious and I kniow that if I
had $£ 300$ to spend on any computer, the Spectrum would be first on my list.

Finally, it is my belief that Sinclair make the world's best computers, and ITV make the world's best television programmes!

I would be grateful if you would publish this letter with the hope of clearing a few minds of the endless quibble between the Spectrum and BBC computers.
Alan McAuley, Carrickfergus,
Co. Antrim.

## VIDEO FAN SPEAKS OUT

Dear Sir,
Since finding your magazine in my local W. H. Smiths back in November last year, I have been buying it regularly every month.
Computer and Video Games fills a unique spot amongst all the computerrelated magazines, dealing more with the fun side of computers, than boring us with the latest technical guff, which most of the others do.
I don't in fact own a computer as such, but am the proud owner of an Atari, VCS, and find your Video Screens reviews very interesting.
One request, how about doing a complete run down on the Atari VCS?, as I feel sure there are many VCS owners who don't really know much about the history or technical side of the VCS and would like to.
Mark Gentry,
Ipswich,
Suffolk.

## SPECTRUM SPECIFICS

Dear Sir,
Having read a lot about the Spectrum several questions still remain in my mind.
Does the screen still flash when the 'Pause' command is used?

When saving and loading a program is the screen display retained or does it behave in the same way as that of the 2X81?

On Sinclair's order form both a "User-defineable
character set and "Userdefineable graphic characters" are mentioned. What is the difference?
When a sound is generated does the program stop until the sound has finished? And finally is it possible to set up files on cassette?
Jason Orbaum,
Surrey.
Editor's Reply: No Jason, the screen does not flash when the Pause command is used. The screen contents are retained when saving and loading, and there is no difference between the "characters" mentioned in Sinclair's publicity. A program does not stop when sound is used, but it will slow slightly, and yes, it is possible to set up files.

## REVIEWERS REVIEWED

Dear Sir,
I have just received my Dragon 32 computer and would like to offer my services for reviewing games for this machine.
Paul Whitby,

## Gloucester.

Editor's reply: We are still short of reviewers for the Dragon 32 and Texas 99/4A computers. If there's anyone out there who has a printer with their computer please write to us.

## IT'S DRIVING YOU WILD

Dear Sir,
I noticed in your November issue that some people were having difficulty with Wild Strawberries. If they are trying to load it from disc they will experience some problems as some of the POKE commands disrupt the game.

The lines to be changed are: 65 where POKE $10240+$ A should read POKE $38912+$ A. The same change should be made for line 70. 75 should be changed to make POKE $10448+$ A read POKE $39210+$ A. 100 should be changed to make POKE 756,40 read POKE 756,152. Philip Sadler, Acton.

## COMPजIION COMPझHION COMPFI <br> spoils, initiating your own raids and

## GAME OF THE <br> YEAR WINNER

Those ravenous little devils, the Nibblers, which appeared in the very first issue of Computer \& Video Games, have finally done some good.
They have won their inventor, Paul Jay, a trip to Paris for two, complete with spending money, courtesy of Computer \& Video Games.

After careful consideration and much heart-searching by our panel of judges, Paul's Nibblers was voted the winner of our first Games Program of the Year competition.
Nibblers won because it was a simple but original idea, which included different levels of difficulty, sound and graphics. It ran smoothly and proved easy to key-in but compulsive to play.
So congratulations to Paul and commiserations to all those of you who held out high hopes of Paris in the Autumn.

And for those of you who have not yet had a chance to meet The Nibblers, we will be printing a Vic20 listing we received which was converted from Paul's game.
Congratulations to all you master-
minds out there who solved our first Puzzling challenge from the November issue.

But judging from the many phonecalls we received about Puzzle C we may have been too clever.

We changed one of the pages in Puzzle C to make it impossible and this obviously confused some of you, but most managed to come up with the right answer.

The correct solutions were reading from the bottom of the page up:
A) Red, Red, Yellow, Yellow.
B) White, Green, Black, Red.
C) Impossible.
D) Red, White, White, Black.

The three winners will be announced next month.

## THE EMPIRE <br> STRIKES OUT

The Seventh Empire is a unique game and competition which will be starting in C\&VG's February issue. It is a computer moderated game specially designed for C\&VG by Mike Singleton.

Every player will control one of the galaxy's many tribes with seven space fleets to despatch around the star systems taking part in the empire battles for a share in the
acts of piracy.

It will accommodate from 1 to 10,000 players with a winner being the player with the most points scored each month. Top scorer in the first month's game will win a Colour Genie Computer.

The first 1,000 readers we hear from will enter free, the rest will be asked to pay a token 50p charge but after that first turn, Seven Empires will only cost you a stamp every month.

Fill in the form below and rush it to: The Seventh Empire, Computer \& Video Games, 8, Herbal Hill, London ECIR 5JB. Although you can enter the game any time, you will need to be on our records before the February issue goes to press in order to enter that first month. See page 72 for the background to the game, the rules come next month.
${ }^{\text {Please }}$ include me in The Seventh Empire ${ }^{7}$ I competition which will run in your Febru- I I ary issue.
I The name of the tribe I wish to control is:
I My name is

## COMPEITION COMPFITION COMPGU

NEXT
MONETH
Take to the War Path in the new year with wargames author Ron Potkin.

Ron was the writer of our April issue star game, Kriegspiel, a chance to take your computer's Panzer divisions in a tank battle scenario.

War Path has a Wild West theme which gives the Indians every chance to reverse history. It also maps out Ron's unique Big Screen approach to computer war-gaming.

Instead of printing out the listing for one machine, Ron will be taking you through each part of the program, month by month, explaining how the Big Screen technique works and showing how it can be utilised on many different computers.

War Path kicks off our new year and provides some marvellous lessons in making the most of computer memory and TV screens.

The Seventh Empire rules are
printed in the January issue. So all you budding fleet commanders should pick up a copy to find out how to partake in galactic warfare, make piracy work for you and playoff one warring empire against another.
The latest news from the C\&VG special Starweb game comes from one of the more threatening of the galactic races, the dreaded Gzinti berserkers.

Mark Woolwich who has been following the growth of the Gzinti empire closely managed to intercept the following transmission on its way to their home world of Gzin.
The rate of expansion mentioned in previous reports has slowed greatly due to conflicts with other races on the thrice removed frontiers.

The powerful and hostile Pirate 1 is being kept out of Gzinti territory. His scout fleets are detroyed by our border fleets who are taking minimal damage.

Artifact Collector 1 has proved to
be non-hostile and information received from him concerning Pirate 2 has resulted in our strengthening of the border between Gzin and Pirate 2. Furthermore a large force has been mobilized with the intent of destroying Pirate 2 .

Artifact Collector 2, after being initially hostile, has retreated, as large force is pursuing him with the aim of neutralizing his threat. A time and labour-consuming job, but vital to ensure continued expansion and replacement of lost ships.

The fleet drawn into the black hole has remained silent and must be considered lost. However, the black hole provides a barrier to attack from regions beyond it.

The prime directive is never forgotten, non-robot population is destroyed wherever ships can be spared, though the needs for our survival and supremacy often conflict with it.
End of report.

## The Gzinti Fleet Controller

## ALIENS WILL GIVE YOU THE SHAKES <br> KAMIKGZZE ALIENS

Aliens are zooming down towards planet Earth with suicidal determination. They will crash into your ship - killing themselves and taking you with them without a pause for thought.

These kamikaze aliens are launched from the mother ship which zaps back and forth across the top of the screen sending a deadly rain of little green men down at your defences.

Shoot fast to stay alive in this new Vic game from Audiogenic. The game is obtainable from the Reading-based firm at $£ 7.99$.

Another new space theme game from Audiogenic this month is Satellites and Meteorites.

You are the commander of a meteorite destroyer ship on a mission to neutralise a storm of meteorites that are threatening your planet.

The only way to destroy the giant rocks is to blast them with your lasers - dodging the ones you cannot get in your sights.

Your mission is made more difficult by a squadron of enemy satellites which fly in after the meteorites.

If you survive the meteorites and the satellites you must then avoid the black hole to complete your mission.

Satellites and Meteorites is a cartridge game and plugs into the back of your Vic. Available at £24.99.

## THE HAPPY EATER IS STILL BITING

## Gobeleman

Gobbleman, Munchman, Munchyman, Snapper - even Munch ' $n$ ' Crunch. Come on guys - let's have some more original names for Pacman style games! Better still let's have some original and exciting new games.

Meanwhile, back in the maze, the ghosts and the little yellow disk with the insatiable appetite are running around the circuits of the Sinclair Spectrum. Gobbleman is fairly close to the arcade version although it does not feature the cage at the centre of the maze
The game is the latest addition
to the Artic computing range of games for the Spectrum. It is available from the Hull-based firm at $£ 4.95$.
The range also includes a high resolution graphics version of Space Invaders at $£ 4.95$ and a Chess tape with seven levels of play at $£ 9.95$. All games will run on the 16 K or 48 K Spectrum.

## THEY CAME FROM THE ARCADES <br> ARGADIANS

Two new games based closely on arcade money-spinners Asteroids and Galaxians are the latest offerings from Acornsoft for the BBC Model B.
Arcadians - the Galaxians clone - looks almost identical to the arcade version and, if its anything like Acomsoft Defender it will play as well as the arcade version too.
The Asteroids type game is called Meteors and again is a close copy of the arcade version with the added improvement of colour.

The games are available from Cambridge-based Acornsoft at £9.95.

## AXE MAN MEETS THE MONSTERS

## ESCAPE

Escape is the name of the game ina $3 D$ maze full of prehistoric monsters.

In ordertoescapefrom the maze you must first find an axe that is hidden somewhere in the maze. You need this to get through the
blue door to freedom.
The monsters track you at half your speed until you find the axe. This heavy weapon slows you down considerably and you may need to drop it in order to make a quick get away before you get through the blue door.

There are five different skill levels in this game-these change the number of monsters chasing you. It is also possible to alter the speed of the monsters.

Escape runs on a 16 K Sinclair Spectrum and is available from Bristol-based New Generation Software at $£ 4.95$.

## THE GAME OF MANY <br> WORDS . . .

## SERABBIE

Scrabble fans will welcome this computerisedversion of the popular word-making board game.

The game is exactly like the board game except you must pit your wits against the computer. There are four skill levels - from easy to downright impossible and the computer keeps the score.

Scrabble runs off a disc for the 48K Apple and costs $£ 24.95$ from London-based Little Genius.

## CHAMP OR

 CHUMP ON THE TRACK? GARSBring the thrills and spills of the grand prix track to the keyboard of your Sharp MZ-80K.

You could become a worid champ in Cars, the latest racing game for this computer.

Nine gears help you to accelerate around the twists and turns of the race track.

But its not only acceleration you'll need if you want to pop the champagne at the end of this race though. You must have quick reactions to steer in and out of all the other racers.
Cars is the latest game from Sharpsoft for the MZ-80K. It is available at $£ 5.00$ from the Lon-don-based company.

## TEW PRODUCTS NEW PRODUCTSNEW PRODUCTSNE

## HEN-PECKED HERO IS ON THE RUN! MAD MARTHA

Poor little Henry is the hen pecked hero of this domestic tale.
One night Henry can take no more. He steals his wages from his wife's purse, sneaks out of the house being careful not to wake the baby or trip over the cat, and heads for the bright lights to have some fun.

Trouble is he runs out of money. His only way to raise some cash is to gamble his few remaining pounds on the spinning wheel of the roulette table.
Just as Henry is getting into his evening at the tables his wife - Mad Martha - has noticed his absence. Realising Henry has absconded with the housekeeping she sets out after him with an axe.
Guess what part you play in this happy little tale? That's right, you are Henry. Watch out for that axel
Mad Martha runs on a Sinclair Spectrum or ZX81 in 16 K and costs $£ 5.95$ from Swansea based Saturnsoft.
Also new from Saturnsoft this month are two adventure games for the Spectrum or the ZX81.
Mines of Saturn challenges you to find the hidden crystal mines and then escape with the goodies. If you succeed, then you are ready for a stiffer challenge - to find your way safely back to planet Earth.
Mines of Saturn and Return to Earth are available from the Swansea-based firm at $£ 4.95$ for the ZX81 versions and $£ 5.95$ for the Spectrum - with a pound off if you purchase both games.

DARK SPACE

## SPRCE PHRREESS

Space Phreeks challenge you to fight them as you journey through space - a lonely traveller in time, the last survivor of a once proud planet called Earth - now just a cloud of cosmic dust floating in the space winds.

Your space ship moves right and left across the bottom of the screen as assorted aliens swarm towards you - some of them firing missiles as they approach.
Space Phreeks runs on the expanded Vic and costs $£ 9.99$ from Harrow based Rabit Software.
Another new game from Rabit this month is a version of the popular arcade game Centipedes. It features the spiders, beatles, bugs, and mushroom eld just like the arcade version.
You must also be careful of the stic
$f 9$ £9.99.
The third game from Rabit this month is a version of the arcade game Frogger - again running on the expanded Vic at $£ 9.99$.

## IT SHOULDN'T HAPPEN TO A BRICKIE!

## FRENZY

Swing that hod of bricks onto your shoulders and set off up the ladder to the next row of scaffolding.

This is your chance to be a big butch bricklayer for the afternoon - flexing your muscles, swearing like a trooper, and
whistling at the girls.
All you have to do is carry the bricks to the next level. But watch out, this is no ordinary building site and there are two monsters stalking the scaffolding - hungry to get their teeth into any passing hunks of beefcake.
If you successfully deliver your hod of bricks and manage to avoid the monsters you go on to a new more difficult level of play. This time there are two, and then four, and then six monsters.

Frenzy runs on a Tandy Model I and III and on a Video Genie I and II. The game can be obtained from East Sussex based Molimerx at $£ 9.78$ inclusive.

## GUNNING FOR ALL THOSE TOP NAMES PESTEROIISS

Do you think your computer is better than any other computer on the market? Or do you have a pet hate - a computer that has behaved badly?

Either way this game offers you the chance to blast the company logos of a selection of rival computer manufacturers.

They are all out there - waiting to be gunned down. From Apple to IBM you can take pot shots at them all. The game is based on the arcade game Asteroids and features the familiar command ships and hyperspace associated with this game. PS Pesteroids runs on the TI 99/4a and is the latest game from Stainless Software of Stockport. The game is available at $£ 9.00$. Also new from Stainless this month are two adventure games $\frac{5}{\circ}$ - Octal 1 and Keys to the Castle - on offer at $£ 9$ for both. Separately they cost $£ 4$ for 0 ctal 1 and £7 for Keys to the Castle.

## MICHAEL ORWIN'S ZX81 CASSETTES

The best software (by various authors) at low prices

## QUOTES

"Michael Orwin's $£ 5$ Cassette Two is very good value. It contains 10 stolid well designed games which work, offer plenty of variety and choice, and are fun."
from the ZX Software review in Your Computer, May ' 82 issue.
"I had your Invaders-React cassette was delighted with this first cassette.
P. Rubython, London NWIO
"I have been intending to write to you for some days to say how much I enjoy the games on 'Cassette One' which you supplied me with earlier this month." E.H. London SW4

I previously bought your Cassette One and consider it to be good value for moneyl"

Richard Ross-Langley, Managing Director,
Mine of Information Ltd.

## CASSETTE 1

(eleven 1 k programs)
machine code:
React, Invaders, Phantom aliens, Maze of death, Planet lander, Bouncing letters, Bug splat.
Basic:
IChing, Mastermind, Robots, Basic Hangman. PLUS Large screen versions of Invaders and Maze of Death, ready for when you get 16 k . Cassette 1 costs $£ 3.8 \mathrm{C}$.

## CASSETTE 2

Ten games in Basic for 16k ZX81
Cassette Two contains Reversi, Awari, Laser Bases, Word Mastermind, Rectangles, Crash, Roulette, Pontoon, Penny Shoot and Gun Command.
Cassette 2 costs $\mathrm{f5}$

## CASSETTE 3

8 programs for 16 k ZX8)
STARSHIP TROJAN
Repair your Starship before disaster strikes. Hazards in-
 clude asphyxiation, radiation, escaped biological specimens and plunging into a Supernova.
STARTREK This version of the well known space adventure game features variable Klingon mobility, and graphic photo torpedo tracking. PRINCESS OF KRAAL
An adventure game.
BATTLE Strategy game for 1 to 4 players.
KALABRIASZ World's silliest card game, full of pointless complicated rules.
CUBE Rubik Cube simulator, with lots of functions including 'Backstep'
SECRET MESSAGES This message coding program is very bxip qexi ji.
MARTIAN CRICKET A simple but addictive game (totally unlike Earth cricket) in machine code. The speed is variable, and its top speed is very fast.
Cassette 3 costs $\mathrm{f5}$.

CASSETTE 4
8 games for 16k
ZX-SCRAMBLE (machine code)

FUNGALOIDS (machine code)
GALAXY INVADERS (machine code) Fleets of swooping and diving alien craft. SNAKEBITE (machine code)
Eat the snake before it eats you. Variable speed (very fast at top speed)
LIFE (machine code)
A ZX8I version of the well known game. 3D TIC-TAC-TOE (Basic)
Played on a $4 \times 4 \times 4$ board, this is a game for the brain. It is very hard to beat the computer at it. 7 of the 8 games are in machine code, because this is much faster than Basic. (Some of these games were previously available from J . Steadman).

Cassette 4 costs $£ 5$.
SPECTRUM SOFTWARE WANTED

## NEW PRODUCTS NEW PRODUCTSNEW PRODUCT

## THIS GAME WILL SLAY YOU! DRAGON QUEST

Seek out the dragon and slay it. This is your task in a new Adventure game based on the popular fantasy game Demons and Dragons.
The game displays text and graphics and challenges you to gain a thousand points before you can go on to level two. The authors of the program are confident that level one will keep you occupied for quite some time. So confident in fact that level two is not yet on sale.
Dragon Quest runs on a BBC model B and costs $£ 11.50$ from the Merseyside software house Bug Byte.

A Fleet Street style bonanza of cash prize incentives is being offered by some up and coming games manufacturers.

Automata of Hampshire set the ball rolling with their Pimania game. The game owes a lot to the successful Kit Williams book Masquerade.

Unlike the jewelled hare of Masquerade the treasure is not buried secretly in the countryside but hidden metaphorically at a certain "time and place"

The prize for the lucky winner of Pimania is the Golden Sundial of Pi , an elaborate compass and sundial crafted in gold, diamonds, worth $£ 6,000$.

Not to be outdone Hull-based Artic Computing are offering $£ 10,000$ plus two tickets to the mystery city where the money is stashed away to the person who can solve their international finance adventure game - Krakit.

Is $£ 10,000$ the limit in prize money so far offered by the software houses? It seems so at the moment - but what's that rumour from Automata about a free trip around the world!
Pimania runs on a Sinclair

nudge features. A torrent of

Also new from Bug Byte this month is a fruit machine game with many of the features of the old end-of-the-pier favourite. The game features spinning wheels with all the fruits and hold and
pennies are depicted tumbling from the front of the machine when you get a winning line.

Fruit Machine runs on a BBC model B and is available at $£ 5.50$ from the Liverpool firm.

Spectrum in 48 K and on a $\mathrm{ZX81}$ BBC versions will be available with versions in the pipeline for for Christmas at $£ 10$.
the BBC 32 K , and Dragon 32 K . Krakit also runs on a Spectrum The Spectrum version costs $£ 10$ and a $2 \times 81$ and is available at and the ZX81 $£ 8$. The Dragon and $£ 9.95$ for either version.

## BATTLE TO REACH THE FORTRESS

## SGBAMBLE

Hover above the missiles and bomb the fuel dumps. Sounds familiar - yes, you guessed it, it's another version of the arcade winner - Scramble.

This latest version on the Sinclair Spectrum in 16 K or 48 K and features four levels of play.

First there are the ground-toair missiles, followed by the spiraling UFOs, and then the fast and furious meteorites.

If you survive this onslaught you can go on to attack the Fortress.

If you successfully destroy the enemy fortress the game starts again at a new more difficult skill level.

Scramble is the first Spectrum game from the Berkshire-based software house - Mikro-Gen. It costs $£ 5.50$ plus 40 p postage and packing.

## BEWARE THE DEADLY IMPOSTERS <br> MARTINTS

The Martians are invading. They rely on steath and sheer numbers to overcome you.

Armed only with a force field you must attempt to catch them before they land. If-you let six of them slip through your net you will be defeated.

Not all the Martians can be trapped in your force field. Destroyers can break through and will kill you if they make contact.

Imposters turn into destroyers at the last moment just as you are about the trap them.

Martians runs on a BBC model A or B and costs $£ 5.95$ plus VAT from Leeds-based Micropower.

Also new from Micropower this month are versions of the popular arcade games Missile Command and Galaxians. The games run on the BBC model B and are available at $£ 6.95$ plus VAT.
"We will be flying at a height of 30,000 feet.
Our air speed will be 500 knots.
And there's a fair chance we're going to crash.'

No smoking. Fasten your seat belt. You're about to take off in a 747. But on this flight you're the pilot.

You could hardly describe THORN EMI's 'Jumbo Jet Pilot' as simply another video game It's more like a session in aflight simulator with lifelike instrumentation and graphics.

To cope you need to be alert. You should expect the unexpected. And you definitely shouldn't lower the undercarriage when your air speed is dropping and the horizon suddenly appears vertical!

On landing, your in-flight computer will assess your skills and give a 'performance rating' If you manage to land that is.
'Jumbo Jet Pilot' is one of 21 challenging new home computer games from THORN EMI. It's pretty demanding But our programs aren't all work and no play.
'River Rescue,' 'Kickback' and 'Soccer,' are all-action games. 'Pool' and 'Darts' will suit armchair sportsmen.

And whilst budding Beethovens play the VIC Music Composer,' would-be Chancellors can work on their budgets with 'Home Financial Management'

We also have educational puzzles for children that will puzzle adults at higher skill levels. But there's one simple idea behind all our titles: weve designed them for players who are bored

leading Computer software outlets.

## CHARMING ENCOUNTER WITH E.T. <br> E.T.

EI, the friendly Kermit the froglike alien who is taking American cinemas by storm will soon be appearing in a brand new video game for the Atari VCS.

The game is still only in the production stage but is expected to be in the shops by Christmas together with a new upgraded baseball game.
The film opens in this country in November. It is Steven Spielberg's latest blockbuster. The 34 year-old director - already a millionaire with successes like Jaws, Close Encounters of the Third Kind, and Raiders of the Lost Ark under his belt - has hit on yet another winning formula.
E.T. is a friendly alien. He has no plans to colonise the universe, and has no lasers, death stars, or destroyer ships in tow. He befriends a little boy and is carried around in his new friend's cycle basket.
The idea of an odd, or friendly, or even helpless alien is not new. But this is the first time it has been given the full Hollywood treatment.
So what about the game? We will be publishing a full description and review as soon as the information is available from Atari - which should be in time for our next issue - watch out for it!

that are chasing you around the maze.

You are a cat being pursued around a maze by three dogs. As you travel you eat up the dots which fill the maze until the maze has been cleared.

Every so often a fish will appear at the centre of the maze. If you eat this you will change into a dog collecting van which you drive around the maze in persuit of the dogs which can now be deposited in the kennel at the top of the maze. But you will have to be quick as you change back into a cat 30 seconds after eating the fish.

The game aiso features a warp button which enables you to disappear if the dogs are about to catch you and then reappear in a different part of the maze.

It runs on the Hanimex HMG5000.

## CAN YOU SOLVE THE DARK SECRET?

One of the darkest secrets of video gaming is the Riddle of the Sphinx.
This Atari VCS cartridge from the Imagic range is still to be solved by US gamers and should prove just as difficult for those in the UK.

This unique game which combines action with clue gathering is proving so difficult to beat we felt the first person to come up with an answer should be rewarded.

So in conjunction with Imagic's UK distributors, Hale's Limited, we are putting forward a

## RIDDLE OF THE SPHINK

prize for the first person to discover the secret of the Riddle of the Sphinx.

The winner will receive $£ 185$ worth of Imagic goods, courtesy of Hale's Limited. This includes the other six titles in the range planned for release over here: Demon Attack, the top-selling Trickshot, Atlantis, Star Voyager, Cosmic Arc and Fire Fighter. Plus a storage container for the Atari games centre and all its attendant wires which organises and 15 cartridges.

Reviewed in our November issue, Riddle of the Sphinx, sets you down in the Valley of Kings, among the pyramids, palm trees and temples of the desert, charged with the mission of collecting priceless treasures and artifacts.
If you solve the Riddle of the Sphinx, send a photograph of the screen to: Imagic Competition, Computer \& Video Games, Durrant House, 8, Herbal Hill, London ECIR 5JB.
If you think you are getting

Escape is the name of the game in this second new offering from Hanimex this month.

You are trapped in an electronic maze with highly charged walls which, if you touch them, the walls will electrocute you.

The aliens are after you. You must shoot them out of the way before you make a dash for the exit of the maze. There is also a deadly spinning dicky-bow shaped flying saucer which will take off and home in on you at any moment. This cannot be shot by your figure. Arcade veterans will recognise this as a version of the popular video favourite Beserk.
The games are in the shops now at $£ 16$.

## THE GAME OF THE FILM

The list of memorabilia on sale in the wake of successful new films is becoming quite daunting. As well as the book, the record, the t -shirt and the badge, video games players will soon be able to purchase the game of the film.
Mattell were the first company to spot this potentially lucrative games market with two games for their Intellivision machine based on the new Walt Disney film Tron.
Atari themselves are about to enter the field with game versions of Stephen Spielberg's latest blockbusters Raiders of the Lost Ark and ET.

close, then send us a letter to tell us of your discoveries so far. Good luck and may your camel's hoof never descend upon the scorpion's tail.

## WORDS OF WISDOM FROM A B17!

Does the game sound good? This is soon to become as important a consideration as playability and what a game looks like.
Leading the field in talking games so far are Mattel with two games for their Intellivision machine.
B17 Bomber takes you on a bombing trip over Berlin, Dresden, and Hamburg.
It's 1943 - a critical period in World War II. Your mission is to destroy the German war machine by knocking out factories, re fineries, warships, airstrips, and anti-aircraft batteries.

The targets are not sitting ducks. You must avoid the barrage of flak exploding around you

## talking games

- and what's that the pilot just shouted?
"Bandits at 12 o'clock". You are now the gunner. The survival of the plane depends on your ability to blast away with the machine gun around and take out those Messerschmitts that are screaming down towards the great hulking target of the B17.
At the start of the game you pick your targets on a map of Western Europe which appears on the screen. Extra points are awarded for successfully bombing a target further from base.
But this is no place for the adventurer. All missions have to

IN THE JUNG
Pitfall Harry is the Tarzan of video games.
He is also your companion in a perilous journey through the jungle in search of treasure.
Harry's adventures include swinging over streams on ropes, hopping across a crocodile-infested river using the crocs' heads as stepping stones, avoiding avalanches of logs and sudden swamps.
Among the other deadly fauna are snakes and scorpions which

## IGIE SOMETHING STIRS

## PIIFALL HARRY

lie in wait among the jungle foliage.

The screen shows a picture of the jungle with a dense covering of trees. At ground level is Harry, jumping logs and whatever other obstacles are in the game at any given time and below him an underground passage is connected to ground level by a ladder.

## HERE'S OUR NEW TOP TEN. . .

A new feature of Computer \& Video Games will be a top ten chart featuring the best selling TV games centre cartridges over the previous month.
The figures come from retail outlets rather than distributers and the ones printed below feature the best selling cartridges

be carefully planned. You have to fly the plane, fire the guns, drop bombs, and do all the navigation with a constant eye on the altitude, fuel, speed, course, and the supply of bombs left.
The second talking game so far available from Mattel and featuring their voice synthesiser is Space Spartans.

You are at the cockpit of a Starfighter. Your computerised flight information controls talk to you as you prepare for battle.

The ship's computer reports on the status of all ship systems.

The Central Computer reports on the energy level and the number of aliens. An alert is sounded by the star base computer when
the aliens attack your starbases. The alien commander tells you when the battle is over.
Mattel are developing more talking games. It has to be said however, that the games are not cheap. Space Spartans, and B17 Bomber for example cost $£ 29.95$.

The games require the Intellivoice sound synthesiser module. This plugs into the Intellivision centre's games socket. The module is in the shops now at $£ 50$.

## STOP THE SUITCASE SHAMBLES

## LOST LUEEAGE

Lost Luggage tumbles from the revolving baggage dispenser as you - the unfortunate porter, struggle to pick them up.

The bags start coming faster and faster as you move the porter right, left and up and down with the joystick.

Lost Luggage is basically a catching game based on the popular Intellivision game Kaboom where the player had to catch bombs.

In this game it's not explosions you get if you make a bad catch but a red face as the contents of the bags spill out on the floor of the airport terminal.

The more you catch the more you score. The game requires speed and manoeuvrability to score really highly. Lost luggage is the latest addition to the Apollo range of games for the Atari VCS.

Endgame is the part of chess where precision is most important - one slip here can throw away the benefits of hard-won advantages and victories secured in the middle game.
Computers generally play endgames badly and yet it is endgame play which is widely believed to be the best mark of a good human player.

A well known example of King and Pawn against King (KPK) is in figure 1 . White's only winning move is $\mathrm{K}-\mathrm{QB2}$, not $\mathrm{K}-\mathrm{Q} 2$ or $\mathrm{K}-\mathrm{K} 2$. Yet to discover this by searching involves looking ahead 22 ply.
If KPK is so difficult, it is hardly likely that a program would find the best move in a complicated endgame such as, King, Rook and two Pawns against King, Rook and three Pawns. How can the grandmasters' endgame knowledge be captured? An obvious approach is to turn to textbooks such as Basic Chess Endings by Reuben Fine.

To a precise reader, textbooks turn out to be full of errors, ambiguities and obscurities. The rules given are unvariably vaguely worded with numerous exceptions. Despite this there is the remarkable fact that textbooks are genuinely useful to the reader and in the case of endgames such as KPK seem to show how to play almost perfectly.
A possible explanation is that chess players have some "internal model" in terms of which a piece of advice such as, "develop Knights before Bishops" can be interpreted without its meaning being precisely specified.
For instance, "Knights before Bishops" is subordinate to "Do not lose your Queen for nothing" and this is considered too obvious to be worth stating.
Finding all such hidden exceptions to rules is difficult for the programmer but simple for the texthook reader to do. Often there is a conflict of objections. How does "advance the Pawn" rate relative to "take the opposition with your King"? People seem to resolve such conflicts without even noticing them.

The art of chess playing is often sacrificed on the alter of chess programming.

The usual way of writing chess programs is based on generating huge trees of variations and assigning each position a fairly crude numerical value. This is geared to what computers can do well rather than the special difficulties of the game itself.
Human players do not analyse tens of thousands of variations before making a move. As I showed last month, grandmasters do not analyse much more than ordinary mortals, but they are much better at recognising features of a position which suggest good moves.
Conventional chess programs have achieved surprising success in recent years, but to advance to grandmaster level may require building in expert knowledge as well as deep searching. Artificial intelligence (A.I.) researchers have devoted considerable effort in the last few years to identifying the form which expert knowledge might take. The restricted nature of endgames has made them a trequent vehicle for such research. Even elementary endgames such as King and Pawn against King are remarkably difficult to program in the usual way.

$a b c d e f g h$

$a b c d e f g h$

One of the most important skills which humans exhibit is the ability to generalise from specific examples to a large number of equivalent positions while also recognising exceptions.
In figure 2 , White's only winning move is K-N4. Giving this information to a human player immediately gives him a great deal of other information. For example, if the whole configuration of pieces were moved to the left or the right or up or down the board, the same White move (King one square forward) might well still be right (you might like to check whether this is really true).
And with the White King on N4 and the Pawn on B2 initially, the move P-B3 is also correct, since it transposes to the same winning position. K-N4 would still be the correct first move, even if White's King were on R3 or R4 instead of N3 in figure 2.
There are clearly many different situations represented by the one diagrammed example and the chess player can make this generalisation easily while appreciating that if the White King were on QB4 in Figure 2, K-N4 would ${ }^{\text {B3Inoy }}$ be the correct move. Playing K-Q5 then gives a position which is more favourable than taking the opposition.

Given an endgame programming environment, which allowed one example position to stand for many, where unspoken objectives (such as "avoid losing material") were automatically included and priorities among goals were easily specified, it might indeed be possible to program the endgame by giving little more than the examples from a textbook.
This sort of approach has been tried in different forms several times in the last few years. As an example of what benefits may be gained, it turns out that to program KPK for the stronger side to win in every winnable position requires only the specifying of 20 simple patterns, plus a suitable "environment", not the 38 ply search needed by a conventional approach.

3.7 million reasons why the Atari Home Computer is something to see, The display screen used with our computers is composed of 192 horizontal lines, each containing 320 dots. Delivering colour and luminosity instructions to each dot for a second requires 3.7 million cycles...alot of work for thenormal 6502 processor.

That's why the Atari computer has equipped its 6502 with its own electronic assistant. It's called ANTIC, and it handles all the display work, leaving the 6502 free to handle the rest. What this means to you is uncompromisingly spectacular display capabilities without loss of computer power needed to carry out the demands of your program.

That's a quality you just don't find in ordinary home computers. And it's one of the reasons some computer experts say that Atari computers are so far ahead of their time.

There's more.... which is what youd expect from Atari Language. The Atari Home Computer uses several programming languages to give the user maximum control of its extraordinary capabilities. PILOT, Microsoft BASIC and Atari BASIC are understood and spoken by the Atari computer. You'llalsofindourAssembler Editor cartridge indispensable for machine language programming

Sound.AnAtaricomputerhasfoursound generators, or voices, activated by a separate microchip. This leaves the principal microprocessor chips free to perform other tasks. And you can take full advantage of this capability which is designed for easy programming

Change. Atari Home Computers have been designed to make change andexpansion easy. The Atari computer has a modular operating system thatcan be easilyreplacedas new technology develops. If you need it, memory expansion requires no more than inserting additional RAM modules." And the Atari ROM cartridge system also makes it easy to change languages. In short, your Atari computer won't become obsolete by future developments... because it already incorporates the future.

Sharing To learn more about the amazing capabilities of Atari Home Computers, either visit your local dealer or fill in the coupon below.

## THE GRAPHIC DIFFERENCE BETWEEN ATARI COMPUTERS AND ALL THE OTHERS.

Please send meFREE abrochure, price list and theaddress

Gorf presents the player with five mini-games. The combination offers variety, but also makes the game tough since each portion has its own strategy. The game also barks out an insult at the player when he loses a man.

The first mission you face is Astro Battle. Invaders are dropped into place; they then begin moving and shooting.

When the Astro Battle invaders are being dropped into place, they cannot move or shoot. Kill as many as possible since you don't have to worry about moving targets or enemy fire.

Pay little attention to the shield. It will let your shot through and block enemy shots. But if you depend on the shield, you may be unpleasantly surprised.

As in Eliminator, a shot in Gorf will disappear if another one is fired. If you see a shot is going to hit a target, avoid the urge to fire another. But if a shot is a clear miss, fire again right away.

In Laser Battle, you must deal with two laser cannons protected by escorts. The cannons fire beams that extend from their ship to the bottom edge of the screen, forcing the player to avoid two shots at a time.

The laser cannons are the main threat. You should try to wipe them out early in the round. Don't get trapped between two shots. Also, watch out for the last shot of a dying cannon. Even after the cannon is gone, this shot will be lethal.

Avoid being drawn into can-
The Gorf tips are taken from a chapter devoted to the game in a new US publication, Guide to the Video Arcade Games.

Twenty games are included with a description of the play and tips on how to achieve a good score. The tips are generally aimed at the beginner and more advanced players will have already progressed beyond the book's power to help.

The book is written by two young American gamers, David Lubar and Owen Linzmayer and is published by Creative Computing Press at a cost of $£ 2.00$.

## TIPS ON GORF

 A GAME FOR REAL MEN . .non fire by the escort dive bombers, and take advantage of your ability to move in all directions when dealing with the escorts.
To deal with the Galaxians, get as close as possible, shoot, then pull the stick back until the shot hits. Repeat this technique, using rapid jerks of the joystick. Don't allow your ship to become trapped. Stay in the mid screen area, so you have a buffer zone.
The Space Warp mission has a black hole at the centre of the screen. This releases objects that fly an outward spiralling orbit. Since you can move upward, it is a good idea to get as close to the black hole as possi-
ble in the early part of the wave.

## ISIT ABIRDORAPLANE?

Buy a hang-glider and see the world. That's the message in the high-flying arcade game, Fast Freddie.
Fast Freddie is a hang-glider with a yen for travel. His aim is to stay in the air as long as possible but he must use his skill to manipulate the invisible air currents, wind direction and the unpredictable up and down drafts.
Players us a joystick to control Fast Freddie as he soars over the wonders of the world. His flight takes in the Alps, both in winter and summer, the pyramids and sphinxes of Egypt, the Taj Mahal, the Pacific Ocean and a host of trees, bridges, tropical islands and other landscapes.

## FAST FREDDIE

A series of obstacles can be found in the skies for Freddie to manoeuvre around. These include: aircraft, birds, helicopters and a magic flying carpet- complete with genie.

Ideally Freddie should fly above the obstacles and kick them out of the way.

Points are scored by swooping down close to earth and snatching flags which are posted along the ground. He can also grab special flags with letters on and spell out a "Bonus" for himself. Further points come for landing on five landing pads which can be found on the way.

It was a pinball player's paradise! The Pinball Owners' Association convention held recently in South London that is.

People flocked from all over the country to play and display their favourite tables.

Around 20 pins were on show and the convention also saw the battie for the coveted Pinball Wizard title.

Dave Dutton from Leeds claimed that honour after battling through to the final which was played on the latest Gottlieb machine, Rocky.

Among the machines on show were Magic City, a Williams machine from '67, Fireball, a Bally table reckoned by pinball addicts to be The classic machine made in '72, and a Williams Flash.

The Pinball Owners' Association was born in 1976 and has grown rapidly. It offers a spares service, a technical library, a monthly magazine and invaluable advice for all pinball owners and players. Membership costs $£ 7.50$, and this includes a subscription to the magazine, called Pinball Player and Penny Slot Collector, plus all the other services the association offers.

If you are interested in pinball - or any amusement machines - further information, or membership, is available from the association's HQ at the following address: The Pinball Owners' Association, Arcadia, 465 Cranbrook Road, Ilford, Essex, IG2 6EW.

Only in films would a character called Little Pico dare take on the likes of Dracula, Frankenstein and the awesome Chameleon Man . . . only films and " X " rated arcade games.

Monster Bash is the name of this imaginative game of horrors which combines some of the aspects of Alien Panic, Donkey Kong and Pacman.
Little Pico is charged with the task of entering the castles of Frankenstein and Dracula and the graveyard of Chameleon Man and destroying each in turn.

The stairways of Dracula's house are guarded by bats but Pico has a "zap" power which he can use to shoot these creatures. Dracula is invulnerable to an ordinary zap and a charge of "super-zap" must be sought by Pico. He achieves this by lighting candles which energise a magic sword.

The candles also serve to make Dracula weak and when Pico touches the energised sword he earns a charge of superzap to try out on Dracula.

Frankenstein's castle is a similar type of challenge but with

## MONKEYING AROUND WITH MARIO

It's a strange life in the arcades. One moment you're the hero and the next you're public enemy Number One.
Take poor Mario, the intrepid carpenter who risked all to save the captive girl in Donkey Kong. In the game's sequel, Donkey Kong Junior, Mario is cast as the evil villain. He has captured Donkey Kong and holds him under lock and key in a cage at the top of the screen.

The rescue bid must be undertaken by Donkey Kong Junior.

Like its predecessor, the Junior version has four screens of action. The first screen is the one featured in this piece and it consists of vines which hang from a series of platforms, suspended in the sky. Junior starts his bid from five stepping stones which rise above a river.
Apart from the whip-holding

## MONSTER BASH

werewolves instead of bats.
The Chameleon Man has spiders as his pets and these are not affected by lit candles. He also has the power of changing colour to match his surroundings and Pico must make use of three colour buttons to keep this fiend visible. scores extra points when he suc- lenge.

The final power of Chameleon Man is his tongue which can reach out to ensnare Pico or soak-up superzap bolts.
A moon also features on the screen. It is Pico's timer, if it goes behind a cloud he knows his superzap power has dwindied and he will have to light more candles.

There are also such peculiarities as Warp Doors - which can only be used when they are lit and Jump Down Zones for Monsters and Pico to use.
 the snapjaws which travel up At the very top of the screen is and down the vines. Blue ones Junior's main aim, the key to his travel one way only (downwards) Dad's cage which hangs from a while red Snapjaws wander up platform above said cage. But and down. Junior can use fruit when he reaches it, Mario merehe finds on the vines to hurl at ly rushes Dad off to another the pursuing Snapjaws and cage, and another screen chal-

## RUNIS ON AN APPLE

## IN 24 K

## BY NEIL FORSYTH

You can tell it's almost Christmas. Even our favourite friends the aliens are getting into the festive spirit. It seems that the best selling gift this year is a space pod - and our little aliens just can't get enough of them. Some unscrupulous aliens have actually decided to resort to stealing these much sought after space pods. As an employee of Santa's Intergalactic Branch your job is to defend these pods from the marauding aliens.

This game comes in two parts. In the first you blast away at the multi-armed aliens as they attempt to steal the pods. If you manage to shoot an alien which has stolen a precious pod

before it reaches the edge of the screen you'll get the pod back. In part two which starts after the third multi-armed alien is shot your task is to collect pods being dropped by aliens. You must do this quickly as the aliens have the nasty habit of exploding - and will destroy you if your ship is too close. If you manage to get through unscathed the game starts again with your ship at reduced power until you reach 6000 points when you will be refueled.
Controls are; I-up, J-left, K-right, M-down.

If your order contains over $£ 120$ worth of computer hardware apply now for interest free credit by telephoning: Mail-order: (0702) 552911. London Shop: 01-748 0926 Birmingham Shop: 021-356 7292. Southend Shop: 0702 554000 or write to P.O. Box 3, Rayleigh, Essex SS6 8LR.

You pay 10\% down, then 10\% per month for a further nine months (to nearest penny). Example: VIC20 Colour Computer. Cash Price $£ 169.99$. Credit terms: $£ 16.99$ down then $£ 17$ per month for nine months: Total $£ 169.99$. Credit quotations on request.

## THE NEW COMMODORE 64

The incredible new computer from Commodore comes with 64K RAM fittedl Plus 16 colours, hi-res graphics, $320 \times 200$ pixels, 40 columns by 25 lines, $Z 80$ micro processor can be added - that means you can run CP/M software, 8 independently movable Sprites with collision detection, and a sound generator with 3 voices, 4 waveforms, envelope and filter to rival some dedicated music synthesisers. And all this at the most incredible price ever.
(AF56L) Only $£ 339.00$

DRAGON 32

The amazing new British computer with a full-travel standard keyboard, a 16 -bit microprocessor, 32K RAM fitted (expandable to 64 K and later to 256 KII ), 9 colours, hi-res graphics and Microsoft extended colour BASIC (the very best BASIC to learn with). It can be used with virtually any ordinary cassette recorder, it has a printer interface (Centron-ics-type), joysticks are available and it's incredible value for money. (AF57M) Only $£ 199.50$

## THE AMAZING ATARI COMPUTERS

4 Consoles Available:
Atari 400 with 16K RAM (AF36P)
Atari 400 with 48K RAM (AF37S)
f319.00
Atari 800 with 16 K RAM (AF02C)
£499.00
Atari 800 with 48K RAM (AF55K)
f590.00

* All above with BASIC \& handbooks

Having to wait four months for his BBC Micro was hard luck for top programmer Mike Chalk, but it was certainly good news for Tandy/Genie owners, for he spent the time creating his last Arcade game, for these machines, and of course exclusively for Kansas

BBC MICRO and COLOUR GENIE programs

## Ask for catalogue

 and see the difference!It surpasses anything, anywhere! Two entirely different 'screens" provide action and variation the like of which has never been seen on a computer screen before, and certainly not in any 'arcade' game
First you have to beat the astroids. Easy at first but when hit they split and multiply, then split and multiply yet again before they can be completely killed off. But as they split, so they come in at entirely different angles... As the game progresses more and more appear.
If you survive the astroids, down swoops the swarm! These horrors move about relentlessly, then without warning two, three or even more suddenly break away and attack, raining down bombs.
Then its back to harder astroids...and so on... There are bonus scores

MIKE CHALK'S GREATEST EVER. For the Tandy and Genie $£ 9.50$ Vat and post paid.

## Tansas

Kansas City Systems, Unit 3, Sutton Springs Wood, Chesterfield, S44 5XF. Tel. 0246850357

## THE ULTIMATE ADVENTURE FOR THE SPECTRUM/ZX81 for only $£ 9.95$

## Your eccentric father

 has left you $£ 10,000$ in Recognised brand leader in microcomputer software The only company giving a lifetime unconditional guarantee and assured return first class post service. his will. In order to claim your windfall you must solvetwelve clues and gain access to a bank account in which the money has actually been deposited. Be the first to crack the puzzle and the prize is yours! Plus you will win two tickets to the city of the secret KRAKIT ${ }^{\text {TM }}$ vault location. The prize money is increased weekly. A telephone number will be supplied so you have the opportunity to find out just how much you could win.
Cheques \& P.O. made payable to: Artic Computing Limited. Please state whether your order is for $\mathbf{Z X 8 1}$ or Spectrum.
*When ordering please state whether for Spectrum or 2X81

A roll of the dice will decide your destiny. Will you be a winner or a loser? There's only one way to find out - try this game! It is based on the well known game, Yachtzee, and the standard rules of this game apply - with the addition of a 50 point bonus if the subtotal reaches 60 or more.

Once you have decided on the number of players - up to four can take part - each player is given three throws of the dice. A player may decide to stick with the first or second throw by simply pressing Newline. Otherwise he will select individual dice to be thrown by typing $\mathrm{A}, \mathrm{B}, \mathrm{C}, \mathrm{D}$, or E in any order and in any combination. After the third throw - or when a player has decided to stick the player must select an option from 1-12. The appropriate score is then given and the next player takes his turn. The game ends when all the players have taken all their 12 options. The one with the highest score is the winner. Will it be you? Roll those dice and find out!

Only $\mathbf{£ 3 . 9 5}$ incl. 3D MAZE. Battle against the clock to escape from the maze, with the computer showing your view in 3-D each step you takel

Only $\mathbf{f 3 . 9 5}$ inc.
Cassette Ten:
Wordpro. Cassette based word processor for Epson or Selkosha printers. Features right hand justification, alter, delete, insert etc. etc. Complete with manual.

Only $£ 9.95$ Inc.

## I. J. K. Software

(All our software is available before we advertise) 55 Fitzroy Road, Bispham, Blackpool, Lancs

PROTECT YOUR PROGRAMMES WITH THIS RECHARGEABLE BATTERYPACK
AT LAST! The answer to one of the major problems facing personal computer programmers and users; - POOR MAINS SUPPLIES CAUSING HAVOC, WHILE YOU SPEND HOURS TRYING TO ENTER YOUR CAREFULLY PREPARED PROGRAMMES.
Now Adaptors and Eliminators, who have produced nearly 70\% of all ZX Mains Adaptors, bring you BATTPACK -a rechargeable 9v Ni-Cad battery pack and transient suppressor, housed in a complementary black ABS case that simply plugs into your ZX adaptor in seconds.
BATTPACK ensures the voltage into your ZX computer never drops below 9 v , thereby eliminating the possibility of a programme crash because of a split second mains dropout! (One cycle is all it needsl) BATTPACK also suppresses transients and RFI using carefully selected capacitors. Your ZX Adaptor keeps the BATTPACK at full charge even when in use -so its always ready for emergencies. Even in the event of a full power cut BATTPACK will run your ZX computer for at least 30 minutes giving you time to save your programme on a cassette or print a hard copy on your ZX printer. BATTPACK comes complete with all connecting leads and is ready for use.
ORDER NOW - SAVE NOT ONLY YOUR PROGRAMMES BUT ALSO YOUR TEMPERI!

MAIL ORDER ONLY. PLEASE ALLOW 28 DAYS FOR DELIVERY.

"You youngsters don't know how well off you are! It's not easy being an old-agepensioner you know. Take my trip to the post office to get my pension for instance. I have to cross an extremely busy road - dodging the big lorries and cars because they haven't put in a crossing yet. It's lucky I'm still quick on my pins otherwise I wouldn't be talking to you now. I've had several close shaves I can tell you! But that's not the end of it. After the road comes the river and as I never learnt to swim as a girl I had to devise a special way of getting across. It took me weeks and weeks and several loaves of Mother's Pride to get the ducks to help me out. Now they let me use them as stepping stones to get to the other side. I bounce off their backs like water off a . . . well you know the rest of that old saying don't you! The only trouble is that sometimes one of my feathered friends decides to take a quick dip just as I am about to step aboard. So far I've managed to avoid a ducking! Just my little joke. But I'm sure one day I'll end up in the drink. Anyway this nice young gentleman has just offered to take me across the road so I'll see you again soon - as long as the ducks are still friendly by the time I reach the river. Byeeee!"

As you may have guessed by now this game is a version of that arcade favourite Frogger. In this version the frog is replaced by a granny and the frog's nests by several post offices. You are given four minutes to get seven grannies to a post office so you have to move fairly quickly. When the seventh granny reaches her destination she gets a double pension and you get another chance to help seven more old ladies across the road. The game starts slowly but speeds up. When a score of 2000 points has been reached the game is at its maximum speed - and will prove difficult to even the most avid Frogger player.

Variables.
A\$(1-8), BS(1-16), CS(1-8): car, log and duck strings. A\$: General get statement variable. H: Number of grannies and post offices. TIS: Time. Y: Distance down the screen. X: Distance right of the screen. A: Peeked number of character that granny is standing on. I: General movement loop. P: Peeked number of key being pressed. HT: Number of times granny has been hit. L: Delay loop. SC: Score.

## PROGRAM NOTES

100-130: Initialisation 140-200: Display current colours (subroutine)
220-460: Set up initial colours, stored in the 2 -dimensional array $\operatorname{COL}(\mathrm{N}, \mathrm{M})$, where COL(1,M) is to face, and $\operatorname{COL}(2, \mathrm{M})$ is the back of the same piece
Subroutine to switch the central pieces
550-660: Subroutine to move outer ring clockwise
670-780: the same thing anticlockwise
790-960: subroutine to swivel the left hand side
970-1140: same thing but right hand side
1150-1290: Instructions and first choice
1300-1610: Computer randomizes display (invisibly)
1620-1680 Input routine to manipulate display
1690-1730 Check to see if back to original display
1750-2140 Subroutine to print display
2150-2260: Successful end to puzzle

This program occupies 4950 bytes, but requires 5589 bytes to run. Because full use is made of the special colour and sound commands of the $99 / 4 \mathrm{~A}$, it will be difficult to translate this program.

All sixteen colours are used to form a colourful display, and good use is made of the CALL SOUND command.

Novice programmers may find lines 1660 and 2190 of interest - in 1660 the ' + ' takes the place of OR, and in 2190 the "*) takes the place of AND - these are useful devices to use.

The PRINT commands should be typed exactly as they appear, as the program uses the GCHAR command in manipulating the central areas.

## Read this ad

You: "Darling, I've decided to buy a computer."
Her: "*++"??!! ${ }^{* \cdots} @ X X ?$ ? $£ £^{* *}$ ??!!? off!" You: "Yes, I know we could do with a new washing machine. But the new Dragon 32 Computer is muchmore important. It's the first computer actually designed for all the familyand it costs under $£ 200$ !" Her: ${ }^{* *}++$ ??!!@££??! fortune!"
You: "No, Im not being selfish. Computers are for the whole family - and theyre going to play a big part in the children's future.
Her: "Oh?"
From this point on, the conversation should follow more reasonable lines.
Allowing you to fully explainthemanyadvantages of the new Dragon 32 family computer. 32KRAMFORUNDER£200: For a start, the Dragon offers 32 K RAM. Your wife may not understand that, so just tell her that the Dragon's capabilities are truly massive - at least twice as powerful as its competitors, with some features you won't find even in more expensive units. The Dragon will give you all the power youre likely to need, and more, to create your own programs - along with
an exciting range of software which can do anything from helping with kids' spelling and arithmetic to creating your own cartoons.

## THE FIRST FAMILY COMPUTER.

All of which brings you nicely to the point where you tell your wife just how much fun the kids will have with the Dragon. How it will save her all that

> Television not included in price.
 How it will magically translate simple typed instructions into beautiful drawings and designs using set, line, circle, draw, scale, rotate and paint features, in up to 9 colours - and play and compose

## to <br> yourwife.

## SPECIFICATIONS

6809E MICROPROCESSOR. Pet, Apple, Atari 400, BBC Micro, and VIC 20 still have the less powerful 6502.
32 K RAM (as standard). At least twice the power of similarly priced machines. Expandable to 64 K RAM.
EXTENDED MICROSOFT COLOUR BASIC (asstandard). Featuring: ADVANCED GRAPHICS (set, line, circle, paint. print, draw, rotate and print using).
ADVANCED SOUND 5 octaves, 255 tones. AUTOMATIC CASSETTE RECORDER CONTROL FULLEDITING withINSERT andDELETE.
9 COLOUR, 5 RESOLUTION DISPLAY.
USE WITH ANY U.H.E TV and/or separate P.A.L monitor.
PROFESSIONAL QUALITY KEYBỌARD.
Typewriter feel. Guaranteed for 20 million depressions.
PRINTER (Centronics parallel).
JOYSTICK CONTROLPORTS.
with 5 octaves of music. How it will engross your children in mind-boggling adventures in dungeons and caves without even getting their knees dirty. And the Dragon works with any U.H.F.TV.

THEY'LL LEARN AS THEY PLAY, And then you can casually point out that although the kids are having fun, theyre also learning. And within a very short space of time, the whole family will be completely at home with programming - with computer language - with every aspect of how computers work. Which can't do their future prospects any harm at all.

BRILLIANTLY SIMPLE INSTRUCTION MANUAL.
The Dragon is made in Britain, designed with the help of British Universities. And it's also worth remembering
that the Dragon's instruction manual is clearer and easier to understand than any otherhomecomputer's.

That its top-quality keyboard is as easy to use as a typewriter, and so well made it's guaranteed for twenty million depressions.

## TAKE THE FAMILY DOWN THE HIGH STREET.

And if she still wants to know more, take her to see the Dragon 32. It'll soon be available in most goodstores - or you can send the coupon for further details.

And if youre one of our many lady readers, please accept our apologies.

Perhaps you'd like to read this ad to your husband.

## DRAGON 32 The first family computer:

## RIUIS ON AN ATARI 400/800 IN 24K WITH JOYSTICK

It's just another routine The maintenance men day in the life of the men working away in the heart of an advanced nuclear reactor when suddenly the unthinkable happens. A radiation alert. Sirens blare out a warning and emergency procedures go into action.
have to leave their underground workplace as rapidly as possible. The failsafe mechanism is beginning to shut down the reactor and seal off areas with airtight doors. Will you be able to get them out before time runs out?

Doors are opening and closing all over the building. Touching the walls will prove fatal - they are contaminated by the radiation leak.

One touch and you are finished.

You must keep moving
always take the exit pre-

#### Abstract

We are very excited to announce the arrival of a full-stroke typewriter keyboard which completely replaces the Atari 400* touch-sensitive keyboard. Extremely easy to install, it uses proper typewriter keys, not calculator keys, and features all Atari* function keys at an amazingly low retail price of $£ 79.95$. Available from the following retailers, who also stock a comprehensive range of Softcell Limited third-party Atari software:

Gemini Electronics 50 Mewton Street Piccadilly, Manchester Tel. 061 -236 3083

Hi-Fi Western Ltd 52 Cambrian Road Newport, Gwent Tel. 063362790

Mays Hi-FiLtd 27 Churchgate Leicester
Tel. 053358662
Micro-Spot 15 Moorfields Liverpool, Lancs Tel. 051-2366628

Morman Audio 51 Fishergate Preston, Lancs Tel. 077253057
R.E.W. Computers Ltd 114-116 Charing $\times$ Rd London WC2 Tel. 01 -240 3386

Sherwoods Great Western Arcade Birmingham 2 Tet. 021-2367211

Silica Shop Ltd
1.4 The Mews, Hatherley Rd, Sidcup, Kent Tel. 01-309 1111

Silicon Centre 7 Antigua Street Edinburgh Tel. 051-557 4546

Trionic
144 Station Road Harrow, Middlesex Tel. 01-8610036
or by direct mail order from us: SOFTCELL LTD 26 Great Cornbow, Halesowen, West Midlands B633AE. Tel. 021-5505063

Please allow 28 days for delivery

Dealer enquiries will be welcomed

## Tis Home Computer.

## Unbeatable value.Unrivalled software.

When you choose a TI Home Computer you're choosing a "real" computer. A computer that can grow with you and your family. A computer that lets you play, invent, discover... that lets your imagination soar.

What makes this possible is our wide range of software. You'll find subjects as simple as "Early Reading" and as complex as "TMS 9900 Assembler Editor." Many of our programs are packaged in our unique Solid State Software ${ }^{\text {TM }}$ Command Modules. Some have sound. Others have superb colour graphics. Simply plug them in and begin.

When you want to learn to
program for yourself, the TI 99/4A is ready too. TI BASIC is built in. The programming manual is easy to understand, easy to follow every step of the way. You will be amazed

WHAT THE PROFESSIONALS LOOK FOR IN A HOME COMPUTER

## Feature $\quad$ Texas Instruments T199/4A

## Microprocessor TMS9900 16 BIT

Graphics $\quad 16$ colout high resolution
Languages T1-BASIC (builtin), extended BASIC, UCSD-PASCAL. Th-LOGO, Assembler
Memory 16 KRAM standard-expandable to max ROM/RAM of 110 K
Keyboard Full size, standard typewriter style
Software 1000 programs to choose from world wide Solid State Yes
Speech Capublitiry
to discover how much fun programming can be.

And when you're ready to expand your system, we're ready too. Our unique Peripheral Expansion System can house up to seven peripherals without extra cables or clutter. There is even a speech synthesiser that gives your computer a voice.

Sound impressive? Try the TI Home Computer for yourself at your nearest dealer. At around $£ 200$ you'll look no further.

TRADE \& EXPORT ENQUIRIES WELCOME

When there's a glut of dots around the screen you need to be feeling pretty hungry to munch your way into the clear.

Glutton is probably not a game to be played between meals. You take the part of a Billy Bunter character and are awarded points for the most dots you can eat. These are laid out in a Pacman type maze and of course you soon realise that you are not alone in the labyrinth!
There is something spooky in there with you, actually there's three of them and they are as hungry for you as you are for the edible dots.

When the player eats one of the larger dots on the course, he is transformed from the hunted to the hunter - malcing his pursuers change their shape and run away.

Fortunately, for the hungry player they also revert to half their normal pace. But watch out when they start to flash it's a sure sign that your meal is about to leap off the plate and start to feel a little hungry itself. It's time to start running again.

The program keeps a high score which is stored, allowing the program to be re-run without clearing the high score memory.
And it also makes use of a short machine code program which loads the contents off the screen so the maze can be drawn from memory rather than the tedious reading DATA.

So if you're hungry for competition . . . start here.

66 COMPUTER \& VIDEO GAMES

## Three New Video Games from PCP For Young and Old Alike

## Headbanger <br> I/ $\mid \vec{C}$ ? ${ }^{\circ}$

Theme: Headbanger enjoys being hit on the head by hammers falling from the sky but collapses if hit by too many without an aspirin hitting as well. At the same time Headbanger tries to grab money bags. A brick wall on the screen is gradually knocked down by the hammers as the player attempts to strike Headbanger and to reach the money bags.
Action: Points for head collisions and money bags, plus 'pain meter' for head-to-hammer or aspirin-to-head collisions and for money bags stowed. Headbanger $£ 9.95+$ VAT

## Rox

Theme: Rocks fall from the sky and the player tries to blast them with missiles before they hit the ground.
Action: Scores are awarded for hits and 'secret bonuses'. Rox $£ 4.95+$ VAT

## 3D Maze

Theme: The player attempts to escape from the maze which is shown in perspective view.
Action: Ratings are scored for the time taken to find the exit from the maze. 3D Maze $£ 5.95$ + VAT

- Dealer enquiries welcome.

## CHRISTMAS ONCE AYEAR.GAMES ONCE INAI

ACIIVISION
video game cartridges for use with the Atari ${ }^{\circ}$ Video Computer System ${ }^{\text {* }}$

## STARMASTER ${ }^{\text {® }}$

You are cruising through an empty part of the galaxy, but squadrons of enemy starfighters are threatening your four friendly starbases. You call up your Galactic Chart and plot a course to intercept. Warping through hyperspace en route you avoid deadly showers of meteorites. Now your gunsight is flashing and the enemy is near. You destroy them with your laser cannon but your computer read-out tells you that their fire has destroyed your shields and drained your energy
reserves.
Again you call up the Galactic Chart and plot a course to your starbase. You dock, and your damage is repaired, your energy banks replenished. Back you go to re-engage the enemy.

Now you have some idea of the astonishing realism and excitement of this Space Odyssey.

## CHOPPER COMMAND ${ }^{\text {² }}$

A convoy of trucks is ferrying vital medical supplies through the arid desert. You are flying escort in your helicopter gunship.

Suddenly a flight of enemy machines shows up on your long range scanner and you head in to attack with your laser cannon. They reply with deadly multi-warhead missiles. You start with two choppers in reserve, and add another for each 10,000 points scored, up to a maximum of six.

# COMES BUT AS GREATAS THESE LIFETIME. 

You'll need to move very fast to destroy this enemy. for the more you shoot down, the faster they get. So even though your chopper is really manoeuvrable (a touch on the joystick sends it into an instantaneous $180^{\circ}$ turn) you'll find the opposing helicopters and jets very difficult to defeat. It's by no means easy. It requires lots of strategy and lightning reflexes and that's why 'Chopper Command' is destined to become one of the all-time video game classics.

STARMASTER ${ }^{\top}$ and COPPER COMMAND. ${ }^{\ominus}$ just two of the great ACTIVISION ${ }^{\ominus}$ range of video game cartridges for use with the Atario Video Computer System. ${ }^{\ominus}$ Each and every ACTIVISION ${ }^{\ominus}$ cartridge features an outstanding game concept and the quality of the graphics just has to be seen to be believed. So get along to your local video game stockist and see the range demonstrated. 'Atar" and viseoc computer Systems sare tracemanso of $A$ tar. 10 ."

## THE SENENTH EMPRRE tion between them was rare as was interstellar travel - and only a handful of interpreters understood the now widespread Fivespeak language. <br> Stellar energy was the cur-

 rency then and it was in the hands of the Bloodline Empire named after the species which dominated both that empire and the energy reserves. The Bloodline was the name given to a tribe of smooth-skinned reptiloids who could reproduce so accurately - cell-by-cell they claimed - that they were one of the few societies in the known galaxy never to have developed clones.

The Bloodline had been the first colonisers of the galaxy and had monopolised stellar energy reserves on the few planets which housed them. These were usually the hot heavily atmosphered greenhouse effect planets and few of these could be developed even by the hardy and technologically advanced Bloodline.

So, stellar energy was in short supply and that way the Bloodline claimed control over the inter-system travel and held the other four empires in check.

The Shell People, evolving swiftly out of their natural amphibious environments, were probably the biggest force in the collection of species known as

## the Water Empire.

We poor humans being too short-lived to achieve much as space travellers had still been able to establish colonies across great tracts of space using mercenary-controlled craft and suspended animation and had found a small voice among the creatures concerned with the physical sciences.

We were highly rated as colonisers as the least volatile of

Illustration: Dorian Cross
races and also for our suitability to colonise the group-B oxygenatmosphere planets which produced the small amethyst-type gems used to harness the stellar energy. Ours was nicknamed the Amethyst Empire.

The smallest empire was the province of the sun beings. Only two species found their way to prominence through solar power and the Sun Empire was among the most elusive in the galaxy.

The largest empire in sheer weight of numbers were those from the frozen or dead planets who were equipped to survive environments where even the most technologically capable beings would not attempt to mine or set up colonies.
Many creatures had evolved in the Dead Empire but they were universally slow-witted and would have doubtless been amalgamated by a more goahead rival if any had seen much use to be made of the dead planets. None did and so by default the Dead Empire came into existence and earned a galactic voice.
So each empire found its own niche in the galactic system, their dependents seldom straying from their own environment and
never indulging in travel beyond their own solar system without the grudgingly given energy of the Bloodline.
Despite the seeming rich variety of creatures, there was still much of the galaxy which was without inhabitants or prospects. Diverse as galactic kind was, it still only occupied a narrow band of planet and star systems.

Of these the greenhouse effect planets with their ability to produce the stellar energy and rich seams of heavier metals were regarded the deepest loss.
The Sun Polyps were a well known but little investigated phenomena. Consisting of little more than a few cells they inhabitated the very edge of planetary atmospheres in their trillions.
D'Taan was investigating them for her tribe, colonists of a Bloodline controlled solar system. Little importance was attached to her work, she hoped to discover how the creatures had managed such a widespread distribution over the galaxy.

A controlled colony was set up as part of her experiments on a new planet - just beyond the life ring - too close to its star to have anything really worthy of the name atmosphere.

NAs luck would have it, D'Taan had chosen a creation generation to transfer and when the exploration ship called back five solar years later, the planet, classified as Solar Desert Type-B had grown cloud cover.
A shuttle sent to the planet's surface came down in the middle of a rain storm and, while the heat was such that only a sunbeing could have stood it unsuited, the atmosphere was doing its work. Of the polyps there was no sign - they had gone into catatonic generation and died out.

D'Taan was quick to realise the importance of the discovery, Bezel, the Gorgan captain of her craft was quicker. He stopped the news being keyed into the ship computer which was transmitting all experimental data to the nearest space station, from where it would be sent to Bloodline databanks.

D'Taan's work had told her something about the polyps' four generation evolution cycle. She estimated a Creation Generation occured every 50 solar years.

And her other experiments had shown that only creation generation polyps actually survived the transmission to a new planet - and then only for a few years.

A brief discussion with Bezel convinced D'Taan that the Bloodline would put a stop to her work to preserve their galactic control. They had to break the bounds of the Bloodline Empire and make for an uninhabited system with polyps of a different generation. They needed stellar energy quickly.

The raid on the Bloodline space station in the Janus system was when piracy first came home to roost in the galaxy.

Prior to that, the stellar energy had been under such control that none could make good their escape to a new system. Janus was not an energy system but it did have a small supply which Bezel knew was kept on the station for passing inter-system Bloodline freighters.

It was only Bezel's inside knowledge of the station which made the raid possible. As it was there was just enough power to rush them into the neighbouring system of Vepoz.
Uninhabitable with four planets, said the exploration charts. But it had everything DTaan needed to continue her next experiment, polyps had been charted on a dead planet,
and there was an unstable greenhouse effect class C planetoid closest to the sun fich in stellar energy which no one could currently mine.

Armed with a cryogenic chamber and a desperate hope that by the time an intersystem Bloodline cruiser reached Janus, their trail would be cold, Bezel put the craft in orbit around the polyp's planet and the crew to sleep until D'Taan's estimated creation generation came round.

The creation generation reached maturity, was duly transfered to Vepoz I and after five further years in the "freezer", Bezel and D'Taan had a stable planet shielded from the

The Seven Empires are torn by war and rivalry. Piracy is rife, raiding an everyday part of interstellar life and loyalty to anything beyond your own tribe rare.

When our Seven Empires game gets underway in February you will be challenged to control one of the warring tribes, to rob, trade and battle you way to victory over up to 10,000 other C\&VG readers plus the editor.

The game will continue for
sun's rays by a growing atmosphere and that elixir of all life, water. But more important they had access to stellar energy.

The Pirate Empire was born over the next years, fuelled by stellar energy and run by Bezel, it struck where it wanted, turned two further planets into stellar supporters and ran the other empires and the Bloodline ragged.

D'Taan split from Bezel, who threatened to rule the galaxy in his lifetime and continued her experiments with polyps while on the run from the Bloodline and most of the other empires, stirred up by her former colleague's atrocities.

There were many questions still unanswered about polyps but the two most important for D'Taan were: why a colony artificially transfered to a new planet always died out and her original puzzle; how could the polyps be so widespread over the galaxy.

The answer lay in the pattern of distribution which she mapped out from stolen empire surveys of the charted systems. Polyp colonies always seemed to spread outwards from a Neutron Star system.

Neutron Stars, are stars whose energy has been spent and the
mass has folded in on itself, the density and gravitational pull of these dead suns caused strange effects on space and they were avoided as navigational hazards. Could they so distort space as to allow travel through to other Neutron Stars.

D'Taan's mind struck upon an ancient hypothesis. Space was curved but how curved? Could there be areas which pulled by the distortion almost doubled back on themselves.

If you looked at the universe as a ring with two planes then a simple twist would turn that ring into a mobius strip with just one plane.

Take that twist into a third or
many months but each month
will have one winner who has achieved the highest score. It's a game of pure skill, simple to enter but difficult to assess tactically and it's all moderated by computer at our end.

The top scorer of the first month will win a Colour Genie microcomputer and it will only cost you a stamp each month to enter. You can also check your own score. An entry form is on page five - so get in early!
even fourth dimension and then what would you have? black holes rent the fabric of the universe, perhaps a Neutron Star was also capable of this, pulling great folds of universal fabric around it and perhaps matter could punch its way through to a part of the galaxy which was light years away by normal means.

Seven years D'Taan spent on the problem before a Bloodline ship finally tracked down her craft and seized herself and the crew. She was frozen and taken back to Grakta, whose voice was loudest of the Five Empires which, split by Bezel's pirates, were now at war with one another.

She was taken into the presence of mighty lizard who had spoken for the Bloodline Empire for over eight generations of himself, no-one but Bloodliners themselves knowing when one Grakta died and the next took his place. With him was a token representative of the Dead Empire, - his only current ally an ice warrior there as a symbol, whose name was never asked or recorded.

Death was the sentence for unleashing anarchy on the galaxy and creating the sixth Pirate Empire. But D'Taan still had an ace to play. Gateway

Stars. She outlined her experiments to a disbelieving Grakta and showed him a way to defeat Bezel's ambitions.

Grakta scoffed but she persevered and demanded two things in return for the secret of the Gateways across the known galaxy. She wanted an empire herself, named after her and devoted to science. And she wanted the secret of the Gateways to be shared across the empires so that none would have the advantage over the other that the Bloodline had enjoyed for so long.
"No", was Grakta's answer. "You die and we fight the pirates as best we can." They were the last words he spoke as an ice warrior's tribal axe buried itself deep in his back. It was the only time that an emissary from those Dead Planet's had acted so swiftly and so decisively.

The ice warrior turned to D'Taan: "You shall have your request and Bezel shall lose his advantage over us".

The Dead Empire, armed with the science of D'Taan's newfound Empire and backed by the Sun Empire's solar troops, met and defeated Bezel at a mighty battle in the Yuses system.

A conquered Bezel sought out his conquerors and the Treaty of the Seven Empires was sworn. It split the galaxy's habitable systems between all seven, it restricted any tribe to no more than seven space fleets, so that no army might ever again grow to threaten the whole empire and it allowed for the inevitable bickering and warfare which would break out.

Most important was the Dead Empire's insistence that the empires be disbanded and that the peoples of the galaxy revert to the tribes and species from which they had come. There was compromise and the empires ended up as figure heads, destined in the course of time to be given into the hands of seven computer controlled ships which react to the data the tribes affiliated to planets in each empire feed into them.

That was the saga of D'Taan, who died before the battle of Yuses, as told to me by the Tiaitha one magical night on the plains of Hakub I.

Fitting because D'Taan's sun polyps seeded the atmosphere of Hakub I releasing its stellar energy to the miners and colonisers and merchants, of which I am now one.

## THE SANITY CLAUSE

My sanity now partially restored with some help from our readers, I feel it is about time to tell all about Asylum.
This game by Frank Corr, Iike Deathmaze, features a graphic maze with movement through it controlled by arrow keys, combined with typed cemmands in English.
However, there the similarity to Deathmaze ends. Asylum accepts whole sentences rather than two-word commands. The corridors are lined with doors which can be seen to be open or closed.
Most of the doors are locked. Some tocks can be picked, others unlocked by a specific key. Guards can be seen barring the way at strategic points - try to pass them at your perill!

When the game commences the player finds himself locked in a cell with

1 often get desperate letters from readers for a solution to a particular problem in an Adventure which is baffling them and preventing further exploration.

Whilst I am happy to help - if I can! - no doubt many readers would rather not see the solution, preferring to battle on themselves. Therefore I have written some tips in code to help solve the problems that seem to be bugging most Adventurers who write in.

To decode the solutions, type in and run the decoding program provided. The program will call for lines of coded text to be input. When this has all been entered, type ' $E$ '. After a short delay, the message will be displayed in clear language on the screen.

nothing but a hand-grenade to keep him company. Yes - If handled wrongly it WILL blow upt.
There is nothing for it but to find a way to escape from the cell. Should the player be recaptured, he will find he must escape agaln, this time by a different method.

Then what? How is it possible to break further into the game with those guards on each corner? This is the point at which I nearly went mad a few months ago! I was not the only one - Steve Gamble from Sheffield wrote in desperation asking me to pass on any useful tips I might receive from heipful readers. He even offered to take out an additional mortgage on his house to pay for such advice!
Fear not, Steve! Computer \& Videe Games readers have come to our rescue! R. W. Patterson of Silcoates School in Wrenthorpe suggested that the guard should be approached with the confidence of a hedgehog trying to overturn a speeding juggernaut.

Tiptoe, turn and face the guard and punch him, was his advice. Then Irisk him, he suggested, and watch the startling metamorphosis as he turns into a box containing useful objects! Well, the tast bit was OK, but the first few moves didn't quite seem to work out.
Mr P. A. Ellis of Wrexham was more explicit in how to get to the frisking stage. For readers whe are as desperate as Steve and myself, I have encoded the instructions - to protect those of sound mind - in a Basic program listing. Type it in and run it to obtain the tips.

Having successlully got past the guard and armed with a brass key, I managed

In suggesting ways that an Adventure might be programmed, I have quite frequently used FOR-NEXT loops to scan strings and arrays to identify words. For example where XS is the string to be searched and YS is the trial string:
$10 \mathrm{~J}=0$ : For $\mathrm{I}=1$ to LEN (XS) STEP LEN (Y\$)
20 IF MIDS (XS, 1,3 ) $=$ Y $\$$ THEN J $=\mathrm{I}$ : GOTO 100
30 NEXT
100 REM VALID WORD STARTS AT THE JTH POSN

If the word is found, control jumps out of the FOR-NEXT loop to line 100 .
This usually causes no problems on most machines, although it can corrupt the "stack".

The stack normally concerns only the Assembly language programmer, but it can get corrupted from Basic, causing unpredictable results.

You will probably only get these problems if the loops are nested and
to free an inmate who proved to be an expert locksmith. The trouble is, he was also a chain smoker, and got quite nasty without a regular 'fix'. I was getting on reasonably well with my new found friend when suddenly and without warnfing he pushed me into a maze.
Mr. Ellis has obviously got beyond this point as he ended his letter with meaningless questions like "How do you get the hanger off the inmate after the second maze?"
Never mind the second maze, Mr. Ellis, how do you get out of the first one? Mr, Ellls didn't tell me any more for fear of spoiling my game!!.

Eventually I found my own favourite ending! Try this one Steve, and your worries will be over. Go into the first door on the right from the left-hand entrance to the guards quarters. There you will be welcomed in for a lobotomy.

Before you can dectine, the screen will clear with a message: 'You are now very calm'.
Asylum runs on a TRS-80 or Video Gente in 16k
buried in subroutines, but the extent to which you can 'get away with it' will also depend on which machine you have.

For instance, the BBC micro will not permit a jump out unless the FOR variable is equated to the TO value, whereas the TRS-80 is much more easy going.

The whole point of jumping out, of course, is that once the required value has been identified, no additional time is required to complete the loop, thus speeding up program execution.

If you run into FOR-NEXT problems that are apparently inexplicable, examine your coding to see if the loop is being exited before completion. If soyou may have to revise your program thus:
$10 \mathrm{~J}=0:$ FOR I $=1$ TO LEN(XS) STEP LEN(Y\$)
20 IF MIDS(XS, 1,3$)=$ Y\$ THEN J $=1$
30 NEXT : GOTO 100
100 REM VALID WORD STARTS AT THE JTH POSN

# ZX81 \& SPECTRUM KEYBOARDS COMPLETE WITH LUXURY CASE FOR ONLY £37.95 INC. V.A.T. 

These highly professional keyboards incorperate executive buttons similar to those used on top-quality computers. A repeat key facilitates entering of characters much faster than is possible with a conventional keyboard, thus making it particularly ideal for cursor control and erasing. Attractive black plastic moulded case. Supplied with $12^{\prime \prime}$ flexible ribbon cable for connection into your computer. Not to be confused with toy keyboards currently on the market. Other attributes as reviewed by Tim Hartnell, ZX Computing/Interface.

Let's see what proverbs we can devise for a simple extension to the program outlined in the previous Go articles. We got as far as random selection of a move within a set of boundary intersections.

Each boundary intersection is defined as being next (considering up to the nearest eight intersections) to both a black and a white stone see figure 1 .
"Don't play where you can get captured next move" is rather an obvious maxim. All the points marked $\AA$ fall into this category and therefore should be eliminated from the set of boundary intersections.

Then there is the well known proverb - "Your best play is often your opponent's best play". The logical converse of this proverb is "Your worst play is often your opponent's worst play". By this token the point marked B should also be eliminated - if it's a bad move for your opponent it's a bad move for you.

Having eliminated some bad moves, let us now move on to rank the remaining possibilities. We have a choice of optimising for defence or for attack. Since you are never so vulnerable as when you attack inexpertly, and considering our program's capabilities (so far) we shall tackle defence first.

A main tactic of attack is to isolate your opponent's groups by placing stones where those groups would otherwise join. Small groups have fewer liberties (adjacent vacant intersections) and so are easier to kill.

The moves to isolate stones are called "cuts" and "peeps". The white stone at E7 in figure 1 is an example of a peep.

A further move by white at E8 would seriously threaten the life of the four black stones to the left. A black stone placed at B2 is an example of a cut.

It separates the one white stone from the two above. "Block peeps and cuts" is advice well worth taking. In our defensive posture we will give such moves priority.

Even though a group might be cut off from another, it can still make territory and avoid capture if it gains enough liberties. Thus we should try to observe the proverb

The rules of play are very simple so you might expect that a tew golden principles would enable a computer program to play well. Not so! Nevertheless there are hundreds of books on how to play Go a lair number of them. English translations from the original Japanese. So surely it must be a matter of transferring the book knowledge into the computer and hey presto!

The trouble is that the proverbs, maxims and hints are all couched in far from concrete terms. Take the proverb "Play zway from your opponent's strength. All very well but exactly how far away? How do you judge the strength of your opponent's positions? And then there are the inevitable exceptions to the rule to ponder! The most important Go proverb of them all is "Don't follow Go proverbs blindly?

- "Maximise the liberties, of your groups". We can do this by awarding higher priority to moves that gain more liberties.

Even with these proverbs, carefully selected for ease of implementation, there still remains a fair amount of design acumen needed to keep the programming simple and efficient.

The selection table defines a pattern recognition method which falls short of obeying the proverbs to perfection but does cover most situations.
The intersections next to each boundary intersection are examined to see which is the first pattern to match and then the appropriate action is taken.

For example we could hold the

first pattern as a byte string with values representing the matching instructions $\mathrm{W}, \mathrm{N} / \mathrm{B}, \mathrm{W}, \mathrm{X}, \mathrm{N} / \mathrm{B}, \mathrm{X}$, W, B.
Starting with North and proceeding in a clockwise direction each intersection is matched against the appropriate instruction. If all succeed i.e. North holds a white stone, North-East does not hold a black stone etc., the appropriate action is taken.

At the first failure the next pattern must be examined or at least the same pattern in the next of its four orientations. This can be done by starting with the East intersection. Note that $\mathrm{N} / \mathrm{B}$ and N/W instructions include off board imaginary intersections so that points at the edge of the board can be matched against the same patterns.

Thus N/B means white, vacant or off board, and N/W means black, vacant or off board. By matching the patterns in this fashion it is possible to hold all the patterns in 88 bytes.

Figure 2 shows the final rankings.

## TRY THE GO FASTER CODE

Home computers are designed to make it easy for us to type in, list, edit, save, load, and run Basic programs.

It is so easy to use Basic on these machines that we need a very good reason to take the trouble of using any other programming language.
The most common reason for getting away from Basic is that it is too slow for some applications; moving

We can use the same idea with other numbers than 10 ; if we use 2 instead of 10 we only need two digits, 0 and 1 , and the positions of the digits, counting from the right represent units, twos, fours, eights, sixteens, etc, each position counting for twice as much as the position immediately to the right. Thus, the binary number 11001011 means one 128 , plus one 64, plus no 32s, plus no 16 s, plus one 8 , plus no 4 s , plus one 2 plus one 1, which works out to the decimal number 203.

We can convert numbers from binary to decimal as in the example

graphics in interactive action games, the calculation of the computer's move in complicated strategy games, and the searching of large amounts of data in Adven-ture-type games are just a few examples.

The fastest response that can be obtained from a computer comes from machine code, but before we look at what this means we need a little background information on number systems and the internal organisation of a computer.

With ordinary decimal numbers, we use a positional principle in order to represent numbers of any size by combinations of 10 different digits, $0,1,2, \ldots, 9$. The amount a digit contributes to the number depends on the position of the digit; the rightmost digit represents units, the next digit to the left represents 10 s, the next digit to that represents hundreds, and so on. The decimal number 203 thus means two hundreds plus no 10s plus three units.
above, by adding the position values for the ls in the binary number. To convert from decimal to binary we divide by 2 , recording the result and remainder, and repeat the process on the result until we reach zero; the remainders in reserve order give the binary number. To illustrate this, let us look at the conversion of decimal 203 to binary:
203 divided by 2 gives 101, remainder 1
101 divided by 2 gives 50 , remainder 1
50 divided by 2 gives 25 , remainder 0
25 divided by 2 gives 12 , remainder 1
12 divided by 2 gives 6 , remainder 0
6 divided by 2 gives 3 , remainder 0
3 divided by 2 gives 1 , remainder 1
1 divided by 2 gives 0 , remainder 1

Reading the column of remainders from bottom to top gives 11001011, the binary equivalent of the decimal number 203.
These strings of binary digits (or bits) are not easy to work with; we generally need to use binary numbers 8 or 16 bits long, and it is very difficult to remember them and to copy them correctly. To get numbers that are conveniently short we generally use hexadecimal or base 16 numbers. In base 16 we need 16 digits, from 0 to 15 , and we use the letters $A$ to F for the digit values from 10 to 15 .

The digits have positional values as in decimal and binary, but this time the values are multiplied by 16 as we move to the left. To take an example, the hexadecimal number 1A30 means one 4096 plus ten 256s plus three 16 s plus no 1 s , which works out to 6704 in decimal.

For numbers up to decimal 15 we can convert between binary and hex (short for hexadecimal) by a simple table:

| Decimal | Binary | Hex |
| :---: | :---: | :---: |
| 0 | 0000 | -0 |
| 1 | 0001 | 1 |
| 2 | 0010 | 2 |
| 3 | 0011 | 3 |
| 4 | 0100 | 4 |
| 5 | 0101 | 5 |
| 6 | 0110 | 6 |
| 7 | 0111 | 7 |
| 8 | 1000 | 8 |
| 9 | 1001 | 9 |
| 10 | 1010 | A |
| 11 | 1011 | B |
| 12 | 1100 | C |
| 13 | 1101 | D |
| 14 | 1110 | E |
| 15 | 1111 | F |

We can also use this table in converting larger numbers between binary and hex.

To convert from hex to binary we simply replace each hex digit by the four binary digits from the table, for example, hex 1A30 becomes binary 0001101000110000 . To convert from binary to hex, we divide the binary number into groups of four digits, from the right, and replace each group by the corresponding hex digit, for example binary 11001011 gives the two groups 1100 and 1011, so the hex equivalent is CB.

Because of this direct conversion we can regard hexadecimal notation as an abbreviation for binary, and instead of 8 bit or 16 bit binary we can use 2 digit or 4 digit hex, which is much easier to use.

If we now look at the way a computer system is organised we can see why binary numbers are used. Figure 1 is a simple block diagram of a computer system CPU which stands for Central Processing Unit.

This is the part of the computer that does all the calculations and in a microcomputer the CPU is a single integrated circuit called a microprocessor.
operated by the presence or absence of a voltage. We can thus represent the data bus by an 8 -bit binary number and the address bus by a 16 -bit binary number, where a 1 means there is a voltage on the line and a 0 means there is no voltage on the line.

Machine code programs are actually patterns of $1 s$ and $0 s$ in the memory, which we represent as binary numbers (or in abbreviated form as hexadecimal numbers). The processor can only work with these binary numbers, but it is almost impossible for human beings to do so.

To show what assembly language looks like and to see how completely different the three processors

ROM is Ready-Only Memory, and is used for permanent storage of programs and data; the Basic interpreter and all the control programs that make the computer work are stored in ROM.

RAM stands for Random Access Memory; the name does not describe the most important point, that it's possible to write new programs and data into the RAM. I/O stands for Input/Output, the connections between the computer and the outside world: keyboard, TV display, tape recorder, printer.

The various parts of the computer are joined into a single system by three sets of connections, the Control bus (which we can ignore as it cannot be affected by programming), the Address bus, and the Data bus (a bus is just a group of connections).

The home computers we are dealing with have eight data line and 16 address lines which are

We actually write our programs in a language that has meaningful names for the machine instructions and allows us to use meaningful names for our data, then we translate into the binary numbers the processor needs.

The meaningful language is called assembly language or assembler, a program written in assembly language is called source code and the translation of the source code into binary or hex is called object code
There are many microprocessors, each having its own machine code and assembly language, but only three are used in home computers: the 6502 (Pet, Apple, Acom, Atom, Vic-20 and BBC Micro), the Z80 (ZX80, ZX81, ZX Spectrum, Sharp MZ80K, TRS-80), and the 6809 (so far used only in the TRS-80 Colour Computer and the Dragon). We will be looking at all three in detail later.
are, let us look at a simple program to add 2 and 2.

The object code (in hex) is on the left and the source code on the right.

In all three programs the same principle is used; load the number 2 into the processor, add 2, and finally store the result in memory location 1000 hex.

There are, however, several differences in the details of the source code.

Because the assembly languages are so different you will have to stick to learning just the one for the computer you have.

You will need a text book to refer to the precise details of the assembly language and the corresponding machine code.

There are many books available, some dealing with a particular model of computer and others dealing with the microprocessor without reference to any particular model.

## THE SEARCH FOR A GOOD STRATEGY

I have been looking at a table for a simple game. The game consists of two players, A and B, independently choosing one of the numbers $1,2,3$. If they choose the same number B wins the amount of the chosen number otherwise $A$ wins the amount of his number. This is equivalent to $A$ choosing a row and B choosing a column from table one.

There is no obvious way of finding a good strategy for playing the game, and the mathematics for solving the problem is quite complicated. However, it is not difficult to write a program that will learn to improve its performance.

The best way of playing this type of game is for $A$ and $B$ to select their numbers at random, with probabilities chosen so that the average
score is better than with any other probabilities.

Program 1 has been written to demonstrate the principle.

In order to keep the program simple and avoid obscuring the principle I have used a simple method for adjusting the probabilities, which will not work correctly all the time, and I have omitted any checks to prevent the probabilities from becoming greater than 1 or less than 0 .

The probabilities are set at $1 / 3$ to begin with, and the subroutine beginning at line 500 selects a number 1,2 , or 3 with the appropriate probabilities. Lines 140 and 150 call this subroutine to obtain the moves and in line 160 the score is found from the array $s(i, j)$.

The subroutine at line 700 is used to update the probabilities and records the average scores to use in the updating. $a(u)$ records the overall average scores and $g(u)$ records average scores over 100 games.

Line 705 calculates the adjustment to be made to the probability for the last row or column selected, and in order to keep the total probability always 1 , half the adjustment is subtracted from each of the other

two probabilities, in lines 740 and 745.

In the games we have looked at so far, each player makes only one move, and the two players make their moves simultaneously, without knowing the other players move. In most real games, each player will have to make several moves, and the players make their moves alternately and know all the previous moves.
However, it is always possible to reduce an extended game to the simple form of one move for each player, although in the reduced form a "move" actually consists of a strategy for playing the whole game.
To see how the reduction can be performed, consider the game of Nim. In this game we begin with several piles of matchsticks or other objects, and at each turn a player may take any number of matchsticks from one pile, the winner being the player who takes the last matchstick.

Let us take a very simple game of Nim, which begins with two piles, the first having one match and the second having two matches.
We can work through all the possible ways of playing this game, as shown in figure 1. The boxes show the position after each move and the numbers above the boxes can be used to refer to the moves.
There are only three ways for the first player to play, because after the second player's move either the second player has won or there is only one match left and the first player has no choice for his second move.

There are four ways for the second player to play (these are plans for the whole game, not single moves) as follows:

1) If player 1 makes move 1 , make move 1,1
If player 1 makes move 2 , make move 2,1
If player 1 makes move 3 , make move 3, 1
2) If player 1 makes move 1 , make move 1,1
If player 1 makes move 2 , make move 2, 2
If player 1 makes move 3 , make move 3, 1

BY TED BALL

# PRACTICAL PROGRAMMING 

3) If player 1 makes move 1 , make move 1, 2
If player 2 makes move 2 , make move 2, 1
If player 3 makes move 3 , make move 3, 1
4) If player 1 makes move 1 , make move 1,2
If player 1 makes move 2 , make move 2, 2
If player 1 makes move 3 , make move 3, 1
We can now make up a table similar to those for the earlier games, with a 1 meaning a win for the first player and a -1 meaning a win for the second player:

| 2nd player's strategy |  |  |  |  |  |
| :---: | :---: | :---: | ---: | ---: | ---: |
| 1st | 1 | 1 | 2 | 3 | 4 |
| player's | 2 | 1 | 1 | -1 | -1 |
| strategy | 3 | -1 | -1 | -1 | 1 |

Of course, it becomes more difficult to carry out the reduction of a game to a table when there are more moves, and this procedure is really of importance only in the mathematical theory, where it is convenient to be able to treat any game in a completely abstract fashion as just a rectangular array of numbers.

For a practical method of playing a game will we need to go back to figure 1 and look at it in more detail.

From the point of view of player

1, the tree has three branches going of from the start position. If we look at the lowest entries under each branch we find, under branch 1 a win for player and a win for player 2 , under branch 2 only wins for player 1 , and under branch 3 only a win for player 2.

It is clear from this that player 1 can always win by making move 2 .

For a more complicated example, consider figure 2 which shows part of a larger tree, using the same
notation for labelling the moves or positions and with the numbers along the bottom showing which player has won.

If we look at the final positions following move 1 we see that in some cases player 1 wins and in some cases player 2 wins. However, by looking one level down we see that if player 2 makes move 1,2 player 1 will win, while if player 2 makes move 1,1 player 1 can win by making move $1,1,1$.

## LOOK MUM, NO WINGS

Along with about a quarter of a million other people, I went to Farnborough last month to see the flying display. The planes and the displays can provide the inspiration for computer games and a wealth of ideas for graphics - both static and mobile. Being able to see the planes, whether in the static display or in the air, reinforces very strongly the importance of being able to see a complex object from many different points of view in order to be able to appreciate its overall shape and structure, and hence perhaps its function. Only the combination of several rather special views of a plane such as the Rockwell B-1 can reveal the way in which its shape has been designed to reduce its visibility to radar systems. This kind of experience should inspire anyone to polish up his program for displaying three-dimensional shapes and using hidden line removal.

The exhibition of aviation hardware is vast, and it is surprising although perhaps it should not be to come across the names of firms familiar to users of personal computers - Thorn-EMI to name one.

What is particularly striking is the number of manufacturers displaying computers and video displays. The graphics capabilities being demonstrated by various manufacturers were quite remarkable, particularly by comparison with what is available for video games and personal computers.

The major applications for graphics were in instruments displays and simulation.

The most advanced instrument panel systems for aircraft cockpits all include a cathode-ray tube on which any individual instrument display can be shown as required. Raster-scan technology is naturally used to generate the display on the C.R.T., and the visual display is composed of dots, just as on a personal computer. However, liquid crystal display technology is used for the display surface.

Any changes to the display occurs, in human terms, instantaneously due to the combination of the display technology and the powerful controlling computer. Carefully designed visuals to indicate the artificial horizon or the weather pattern ahead are readily comprehensible to the layman, and must be invaluable to a trained pilot.

More immediately appealing are the visuals in flight simulators. One simulator being displayed by Redifon Simulators gave wide-angle visuals, so that a simulated view
flying requires detailed and realistic images as are technically and economically possible. A program for a personal computer could be highly effective while falling well short of the quality of flight simulator graphics.
In any event, the display must be of very high resolution with access to a full palette of colours all of which must be available in varying intensities. This implies that very large screen memories are necessary - larger than can be addressed by eight-bit micro-
 machine is needed. It would be needed to produce realistic mobile graphics with such images.
The programming expertise necessary to write programs generating such graphics is mostly contained within the companies involved in making the simulators.
The only program known to me that has graphics remotely approaching the level of flight simulators is a Jumbo jet landing program for the Atari. The Atari machines, incidentally are probably the only current personal computers able to display the necessary images.

As all this graphics capability and technology already exists in the aviation world, there is no reason why it should not be borrowed and adapted by the games and computing sector, as long as it can be delivered at the right price.

# SANTA'S CHOICE 

## RADIO CONTROL

In the early days of radio controlled cars, the returns rate was nothing less than horrendous. This was due to many problems but was not helped by the customer having to pay out upwards of £10 for batteries and a licence to be able to play with the vehicle.
Initially, British suppliers (most imported the vehicles) rushed into this area and failed to check quality and many toy buyers dipped their toes in the water and ran like mad when the product was returned.
The buyers left most ranges alone during 1981 but having been convinced of the quality of ranges such as Corgi (now manufactured in Japan) have once agaín stocked in depth. A recharger unit and rechargable batteries are recommended.
Programmable vehicles have not suffered from the same quality aspects. Unfortunately the number of items available is very few.

Best Buys in this category are: VW Turbo Rally Car by Corgi a realistic model with digital proportional steering. It has five separate functions - forward, reverse, turn left, turn right and stop and costs between $£ 33$ and £40.

The Honda Superbike by Corgi is another realistic model with detachable rider; proportional steering with transmitter. Engine revving and running noises.

Electronic Toys that relied on the famous "chip" were first introduced to the British Toy Trade in the Autumn of 1978.

Since then, we have seen four different generations come and go - some hugely successful, the majority completely the opposite. There have been hand-held games, table top games and most recently credit card size pocket games.

Whilst these have been introduced, throughout the traditional items have remained and I suppose could now be called staple games.

This has of course affected the toy industry and sales of electric train sets and motor racing sets have suffered, in fact collapsed. Also traditional games have suffered as electronic toys (not including television games) have taken over $10 \%$ of the actual toy sales.

What do you look for when buying an electronic toy?
Well firstly, as with television games and cartridges, there is game play. Also, and probably most important, there must be a good back-up by the manufacturer/imponer, such as after-sales service.

Let's look at the varying types of electronic toys. There are mini-arcade games (both hand-held and table top versions), basic family challenge games, watches incorporating games, vehicles - radio controlled and programmable and learning aids basically for the younger child.

Functions - forward, turn left, turn right and stop. Between $£ 26$ and $£ 32$.

Bigtrak by Milton Bradley must be the best known of all electronic vehicles, having appeared on many television programmes that are concerned with the famous chip.
It can be programmed to travel forwards, backwards, left, right, turn, spin or fire it's photon cannon.

Bought separately, the Bigtrak Transporter can be linked to the vehicle and programmed to haul loads and dump them on command.

Bigtrak is priced between $£ 27$ and $£ 40$ and the transporter costs from $£ 14$ to $£ 20$.

Milton Bradiey's Bigtrak

## FAMILY FUN

The area of family challenge games is most confusing. You have items that were introduced in the first year of electronic toys and remain strong sellers as they are now regarded as staples.

On the other hand you have the 'gimmicky' items that arrive with a lot of bally hoo and that is all that can ever be said of them - they have 'died' just as quickly as they arrived.

A common fallacy with toy manufacturers is that if you change a highly successful line and introduce either an up-market or down-market equivalent, success is guaranteed. This has also happened to basic electronic family/challenge games.
The prize winner was Computer Perfection. Perfection as a standard shape sorter game has been a huge success for the last six years. Computer Perfection was added to the range in the US in 1979 and in the UK in 1980 and played basically the same way but electronically. Unfortunately the item lasted only two years in America and was finished (if it ever started!) after one year in the UK.

One exception has been Computer

Battleships,
which was accepted as the first ever electronic game in the UK in 1978 and has sold well ever since. When you think that the standard game still costs only around $£ 7$ and the electronic version is around $£ 30-£ 35$ it makes you wonder.

Best buys here are, the Simon Family by Milton Bradley. Simon was one of the earliest items onto the market place. It was followed by Super Simon and Pocket Simon. All three are still available and make up a most compact family range. The idea of the game is to repeat after 'Simon' (as in the child's game Simon Says) the colour sequences as quickly as possible. If you are correct the lights and sounds go faster, if you are wrong Simon blows a raspberry and it's back to square one.

Super Simon includes several variations and costs between $£ 30$ and $£ 40$; Simon, between £18 and £30; and Pocket Simon £11 to $£ 20$.

Pocket Simon
Dark Tower is the most recent title in Milton Bradley's electronic range. It is more than just a game - it's an experience. Record your moves on the computerised control centre as you enter this exciting world of fantasy. First to travel around the board and storm the Dark Tower is the winner. Price, between $£ 29$ and $£ 40$. Continued on Page 88.

FOR HOME: The ORIC-1 is the professional alternative for home computing. Superbly styled, the 57 key layout is based upon computers costing many times more than the ORIC, and will help the whole family to learn and understand computing. right from day one. The ORIC incorporates an improved version of Microsoft Basic for ease of programming and use. For the enthusiasts the computer has laser zaps, explosions, etc. pre-programmed for games use, with Hi -Fi output for incredible effect. The communications Modem will allow' Telesoftware', message sending, and Prestel use

FOR BUSINESS: The ORIC-1 is the answer to many day to day problems. Software is becoming available for payroll, accounts, stock-control, and many more systems to help your day to day business organising and control. In addition, the ORIC COMMUNICATIONS MODEM will allow you to access up to 200,000 pages of Prestel information, to send and receive electronic mail;, to book hotels, and flights (and pay for them) and to look at the latest stock-market and share indexes.

In short the ORIC-1 is a must for all businesses large or small.

HOW TO ORDER YOUR ORIC-1: By phone: Just ring our telesales number Ascot (0990) 27641.

By post: You can pay by cheque, postal order ACCESS - BARCLAYCARD - AMEX - DINERS. (Please allow 28 days for delivery).

# SANTA'S CHOICE 

continued from page 85 Master Challenge by Peter Pan is an electronic quiz. Plug the Master Challenge computer into the quiz folder and dial any of the 1001 questions. Select your answer from one of four alternatives and the computer will tell you if you are right or wrong. It comes complete with cartridge number 1 with 1001 general knowledge questions and costs between $£ 14$ and $£ 20$ while Cartridge Quiz books are priced between $£ 3.50$ and $£ 6$.

Computer Battleship by Milton Bradley was the first electronic game brought into the UK. This is a game with 'live' action and sound. Hear the hunting of the sonar, the whistling of your missiles and the explosion of a direct hit. Claim victory with three 'whoops' on your destroyer's siren. Price between $£ 24$ and $£ 40$.

## TABLE-TOPPERS

In the beginning there were the hand-held games. Initial sales were tremendous but as all manufacturers, especially those in the Far East, jumped into this market there was tremendous overproduction and 'dumping' occurred, killing the market more-or-less overnight. The sport orientated items were never a huge success and retailers, in an effort to reduce stocks, discontinued the sports lines, this made the other items look well overpriced.
The hand-held game was followed by the table-top version, firstly space war items and then arcade
games in a reduced form. At the same time the miniature pocket games (credit card size and calculator size) entered the market, although once again we are going the way of hand-held with a lot of poor quality Far Eastern items pouring into the country.

Make sure the graphics are good (as television games cartridges) and the sound reproduction excellent. Games with varying skill levels are obviously better and the games that can be played using a mains adapter are the most sensible (batteries are expensive and these games "eat" them).
When buying, be careful, make sure the bargain has all the above, as the cheap imports that have been dumped very rarely offer the facilities mentioned.

Among the best buys in this field are: Astro Wars by Grandstand. A table top game featuring on-screen colour with a special magnifying effect. Five lines of action with multi-coloured invaders and futuristic sounds just like the real arcade game. It has four levels of play and was voted best new toy of 1981 by the National Association of Toy Retailers. It costs between £22 and $£ 30$.

Taking you back in time is Caveman by Grandstand. A table-top game with multicoloured display. Control the caveman stealing eggs from the dinosaur, whilst avoiding his attack, features include dive bombing primitive birds, an axe attack, a volcano eruption and a fire breathing monster. Two levels of play and four lives, priced between $£ 19$ and $£ 29$.
 an obvious follow-up to Astro Wars. It is based on the popular arcade game of the same name, and has a multi-coloured display with new exciting sound effects. Four separate phases including a meteorite attack, a space squadron attack, flight through the black hole and a base station attack. Costs from $£ 22$ to $£ 30$.

Defender by Entex is a hand-held version of the Williams arcade game that has long been an arcade favourite.

Defend your planet against many alien craft in a fast-moving rocket ship. It features asteroids, aliens, humanoids and a variety of hazards as well as twin radar spotter screens, multicolour display and sound effects. Price between £27 and £35.

Munchman by Grandstand is a table top game with multi-coloured display. As with the hugely successful PacMan game you attack the monsters by eating the power food to score points. Two skill levels and costing between $£ 18$ and $£ 24$.

PacMan 2 by Entex is the hand-held version. A multicoloured game of strategy and tactical pursuit. Six skill levels in the single player mode with two skill levels in the two player mode. It costs between $£ 24$ and $£ 30$.

Galaxy Invader 1000 by Computer Games Limited (C.G.L.) is a hand-held game with three skill levels and areat sound effects - score

## PLAY SCHOOL

Electronic technology is now used in so many areas that it is no surprise at all that the expansion of the 'chip' in pre-school toys has occurred.

From a few years ago, when Texas Instruments entered the market, the idea of a small child learning from an electronic aid has become more-or-less standard. The early days of an American voice have practically disappeared and Milton Bradley have now entered the market.

The educational toy is now being used in many schools and is as much fun for the adult as the child.

Among the Best Buys are: Speak and Spell by Texas Instruments. The first of the 'talking, toys, it also has built-in extra games. It is a fantastic learning aid with computer brain and electronic voice. Pronounces words letter by letter - rewarding when right, correcting when wrong. Priced between £33 and £43.

Little Professor by Texas Instruments is a child's first electronic learning aid. Now up-dated to a LCD display, it has thousands of maths problems at four levels of difficulty. Priced between £9 and £12.

Major Morgan by Playskool is Milton Bradley's first entry into the pre-school elec-

## SANTA'S CHOICE

ly insert one of the song cards and touch the electronic keyboard according to the letters, numbers, colours or shapes shown. It is priced between $£ 7$ and $£ 12$.

Maximus by Playskool is the computer companion for learning and fun. Green "tick" lights up for correct answer, red "cross" with a buzz when wrong. Plays tune when all correct. Four different activities - spelling, match-ups, counting and music. It costs between $£ 8$ and $£ 14$.

You will notice from the wide range of price gaps, it pays you to shop around and find the best price.

## JUST WATCH IT!

A deluge of games for the Atari VCS system is ready to descend on to the UK market.
They are manufactured by a host of new independent US software houses, which numbered 17 at the last count.
While the prospect of all these new games is an exciting one, it is necessary to add a word of warning. Not all of the games advertised have been properly converted to the UK market.
The American television system is not compatible with the British system and any cartridges produced over the Atlantic have to be converted.

Otherwise they will not offer as accurate and clearly defined graphics as they should, they may be slower and the cplour usually suffers - in extreme cases, the cartridge will not produce colour at all.
The normal process is for an American company to make a deal with a UK distributor to release his cartridges over here. These are then converted and soon find there way into the shops.

Among the ranges currently out over here are: Parker, distributed by Palitoy; Imagic, distributed by Adam Imports; Appollo, distributed by Vulcan Electronics and Activision, by Computer Games Limited.

But cartridges that are available in the US can still be shipped over unconverted and sold here.

## WE'RE PLAYING FOR TIME . . .

Pocket size game-watches are coming down in price and there will be an abundance to choose from this Christmas.
A conservative estimate puts the number at 80 different varieties in numerous ranges. These can look very impressive with all sorts of wierd creatures inhabiting the screen. And some of the recent batches even have storylines to back them up, like Hanimex's Sleeping

Beauty for example.
But, the important thing to look for is that elusive addictive quality which prevents you from picking the game up "for just two minutes" Simple games usually work the best in this format.
Among the best games are: Popeye from C.G.L. which sets you the task of catching articles thrown by Olive OyI, while Bluto tries to knock you into the harbour. Price about $£ 19.95$.
$\square$
these cartridges are not compatible is due to the different electricity supply standards which apply in the US and in Britain. American TV sets run off 70 Hertz while British sets run off of 50 Hertz.

This causes cartridges which have not been modified to roll continuously as if the TV set were faulty.

In order to correct this cartridges need to be fitted with a stabilisation circuit to hold the picture stable. Questions to ask your dealer
before you buy are: "Is it a

British standard PAL cartridge" or simply, "Is it compatible with British television sets".

Best of all ask to see the game actually working before you purchase the cassette.

System $\mathbf{X}$ is a hot topic in TV gaming. Atari is still not telling its public much about the machine which is due to supersede the incredibly successful Atari VCS.
We have managed to glean a picture (right) and a few facts about this machine which has earned itself the nickname "the earned itself

## SPACE WARP

A recent addition to the pocket l.c.d. games with time facility is the watch with game facility.
Watches have always suffered from a high reject rate and obviously with the game facility added, rejection rates have increased. Watches are now much bulkier but sales have gone well due to the novelty of the item.

Again, space games are among the most popular with game watch fans. Ones to watch out for here are: Game Time by C.G.L. The Space Invader type is by far the best seller and can be played with or without sound effects on the I.c.d. playing area. Cost, between $€ 20$ and $£ 30$.

Remote control joysticks are one feature on the new system and it will also have a trackerball control.

There will be 12 cartridges in the initial range, including sports and familiar arcade titles and the graphics will be similar in detail to the cartridges produced for the 400/800 computers.

Among the graphical frills will be clouds of dust produced by runners in the sports cartridges. And it is rumoured that there will be a plug-in attachment which will allow the system to run existing Atari VCS cartridges.

Beating the Atari System $X$ to our selves will be Colecovision's new TV games centre, due out early in 1983.
It is being marketed in this country by Ideal and is promising a big improvement in games centre graphics.
 continued on page 91

## Continued from page 89

## OPENING MOVE

What questions should you ask when buying a dedicated chess machine?
Most important is speed of response, if you want a machine which plays as fast as you do; you will find it irritating to sit and watch it struggling over an obvious move.
Ask for a shop demonstration, not just a talk through the instruction booklet; try and find out how the machine responds to an opening variation and how easy it is to set up a position on the board.
For models destined to spend long periods away from power points, ask how long the batteries last - two hours is of little use to anyone. Examine the display or the pieces to see if you can distinguish them easily, find out about a guarantee two years is what you should expect for the powerful machines. Remember these machines still have a $2-4 \%$ failure rate.
If book openings are important to you - if you take chess seriously they will be - ask how many the computer can play and see if you can make anything of the instruction manual. Then start checking the price.

## CHESS CHAMPS

The Scisys Mark VI Chess Champion came into the country last month boasting a brand new program which excells at Sicilian Defence and plays a tight game with the emphasis on strong pawn centres.
At $£ 210$ for the machine with LCD chess board dis-

#### Abstract

Does the computer owner still have any use for a dedicated chess-playing machine?

With some extremely powerful chess programs for home computers being produced in ever-decreasling memory, it is all too easy for the computer owning chess player to scoff at the more-expensive dedicated machines.

Sargon II may be more than a match for most of us but Terry Pratt looks at the current state-of-theart of consumer chess machines.

play, or another $£ 125$ if you want to attach it to a sensory board, it does not compare favourably with a Sargon II program on your home computer.
It would beat Sargon II in a straight contest, although - unlike its Mark V predecessor - it has not been specially designed to defeat other machines.
It was one of those inevitable ironies of the computer age that machines designed to play against humans first had to prove themselves against other machines. The Mark $V$ did this by going out of "book" as soon as possible, and so throwing its opponent back on to its own resources early in the game.
"Book" openings are one of the main advantages of the dedicated chess machine, over its home computer rivals. All the top class chess machines have a huge repertoire of stored book openings.

As casual chess enthusiasts are more likely to study the game than actu-
ally playing it, they usually have a strong knowledge of the openings that top players use and how to progress to a reasonably even middle game in many of them.

They invariably have developed their own favourites and a computer which will take them down these familiar paths, responding quickly because it is just pulling moves out of memory, will enable the player to explore and examine his favourite openings further.

One of the Scisys' main rivals at this level is the Sensory 9 , from the challenger range, distributed over here by Computer Games Limited.

It accepts a library of mod-
the dedicated machine have? Well a quick look through its extras will show a few. These include: Analysis, where it gives your best move and prints out a numerical comment on the state of the game; Comment, where it will tell you dis-arming things like "mate-in-four"; Draw, it may accept your offer of a draw; in problem mode it will sift through the combinations for the best moves; it can keep 12 simultaneous games in memory to play.
It can be educational. The Scisys comes with a booklet size set of instructions and Vulcan Electronics, which markets the game in the UK

up to date with the latest innovations of computer chess and store various book openings - the first two cartridges gives an effective 27,000 opening moves for its owner. The machine costs $£ 149.95$ and its cartridges cost from € 59.95 .

Sounds like a good idea when you consider how chess programming is constantly been updated and experimented on. Unfortunately, although the programmers themselves are naturally excited by tiny improvements in the computer's play, the benefit as seen from the usual chess player's point of view are negligible. The fact is that computers, without taking in ordinate amounts of time, or being attached to walls of mainframe memory, are still groping just below top club player standard and will be for some time.

What other benefits does
claim it is very educational. It is. In auto mode it will happily play itself and display its profound knowledge of openings with a tendency to veer towards the Sicilian.
Computer Games' Voice Sensory Challenger costs £199.95 and will also keep you aware of what is going on with phrases like: "Your move". and "Mate in two" which can be irritating and is probably the closest any chess machine will ever get to gamesmanship.

Of course these models plug into the mains and are hardly portable in the same way as the old travelling chess sets.

The Hanimex costs £ $£ 30$ and is a marvellous buy for the keen chess beginner.

Also its batteries last a very impressive 50 hours.
The Mini-Sensory Chess Challenger costs $£ 49.95$ and looks just like the old travelling sets, the Scisis Executive costs $£ 69,95$.

## Sinclair ZXSpectn

## 16Kor 48K RAM... full-size movingkey keyboard... colour and sound... high-resolution graphics...

 From only £125!

First, there was the world-beating Sinclair ZX80. The first personal computer for under $£ 100$.

Then, the ZX81. With up to 16 K RAM available, and the ZX Printer. Giving more power and more flexibility. Together, they've sold over 500,000 so far, to make Sinclair world leaders in personal computing. And the ZX81 remains the ideal low-cost introduction to computing.

Now there's the ZX Spectrum! With up to 48 K of RAM. A full-size moving-key keyboard. Vivid colour and sound. Highresolution graphics. And a low price that's unrivalled.

## Professional powerpersonal computer price!

The ZX Spectrum incorporates all the proven features of the ZX81. But its new 16 K BASICROM dramatically increases your computing power.

You have access to a range of 8 colours for foreground, background and border, together with a sound generator and high-resolution graphics.

You have the facility to support separate data files.

You have a choice of storage capacities (governed by the amount of RAM) 16 K of RAM (which you can uprate later to 48 K of RAM) or a massive 48 K of RAM.

Yet the price of the Spectrum 16 K is an amazing $£ 125$ ! Even the popular 48 K version costs only $£ 175$ !

You may decide to begin with the 16 K version. If so, you can still return it later for an upgrade. The cost? Around $£ 60$.

## Ready to use today, easy to expand tomorrow

Your ZX Spectrum comes with a mains adaptor and all the necessary leads to connect to most cassette recorders and TVs (colour or black and white).

Employing Sinclair BASIC (now used in over 500,000 computers worldwide) the ZX Spectrum comes complete with two manuals which together represent a detailed course in BASIC programming. Whether you're a beginner or a competent programmer, you'll find them both of immense help. Depending on your computer experience, you'll quickly be moving into the colourful world of ZX Spectrum professional-level computing.

There's no need to stop there. The ZX Printer-available now - is fully compatible with the ZX Spectrum. And later this year there will be Microdrives for massive amounts of extra on-line storage, plus an RS232 / network interface board.

## Key features of the Sinclair ZX Spectrum

- Full colour-8 colours each for foreground, background and border, plus flashing and brightness-intensity control.
- Sound-BEEP command with variable pitch and duration.
- Massive RAM-16K or 48 K .
- Full-size moving-key keyboard- all keys at normal typewriter pitch, with repeat facility on each key.
- High-resolution -256 dots horizontally $\times 192$ vertically, each individually addressable for true highresolution graphics.
- ASCII character set-with upper- and lower-case characters.
- Teletext-compatible-user software can generate 40 characters per line or other settings.
- High speed LOAD \& SAVE-16K in 100 seconds via cassette, with VERIFY \& MERGE for programs and separate data files.
- Sinclair 16K extended BASICincorporating unique 'one-touch' keyword entry, syntax check, and report codes.

## The ZX Printeravailable now

Designed exclusively for use with the Sinclair ZX range of computers, the printer offers ZX Spectrum owners the full ASCII character set-including lower-case characters and high-resolution graphics.

A special feature is COPY which prints out exactly what is on the whole TV screen without the need for further instructions. Printing speed is 50 characters per second, with 32 characters per line and 9 lines per vertical inch.

The ZX Printer connects to the rear of your ZX Spectrum. A roll of paper ( 65 ft long and 4 in wide) is supplied, along with full instructions. Further supplies of paper are available in packs of five rolls.

## The ZX Microdrivecoming soon

The new Microdrives, designed especially for the ZX Spectrum, are set to change the face of personal computing.

Each Microdrive is capable of holding up to 100 K bytes using a single interchangeable microfloppy.

The transfer rate is 16 K bytes per second, with average access time of 3.5 seconds. And you'll be able to connect up to 8ZX Microdrives to your ZX Spectrum.

All the BASIC commands required for the Microdrives are included on the Spectrum.

A remarkable breakthrough at a remarkable price. The Microdrives are available later this year, for around $£ 50$.

## How to order your ZX Spectrum

## ZX Spectrum software on cassettes-available now

The first 21 software cassettes are now available directly from Sinclair. Produced by ICL and Psion, subjects include games, education, and business/ household management. Galactic Invasion...Flight Simulation...Chess... History...Inventions...VU-CALC...VU-3D ... 47 programs in all. There's something for everyone, and they all make full use of the Spectrum's colour, sound and graphics capabilities, You'll receive a detailed catalogue with your Spectrum.

## RS232/network interface board

This interface, available later this year, will enable you to connect your ZX Spectrum to a whole host of printers, terminals and other computers.

The potential is enormous. And the astonishingly low price of only $£ 20$ is possible only because the operating systems are already designed into the ROM.

You've seen it on the big screen. Now it's all happening on your screen, because now The Empire Strikes Back ${ }^{(0)}$ where it really hurts. At home.

So climb into yourSnowspeeder, aim for the "bomb hatch," try to gainThe Force. It's the only way the At Ats are at your mercy.

The Imperial Walkers stop at nothing. They shoot "smart bombs" that follow you, and no matter how much you try to weaken and destroy them with your barrage of missiles they seem to keep on moving,
faster and faster heading for the Rebels' power generator. Unless you can prevent them they'll blow up the entire base!

It's up to you to strike back while there's still time.

VIDEO GAMES
THEY HATETO LET YOU WIN.
For use with the Atari video computer system.

## ZX81/SPECTRUM/DRAGON 32

A fantastic range of 16 K games, each complete with fully comprehensive instructions from:

## M. C. LOTHLORIEN <br> ENTER THE DRAGON!

## 1. TYRANT OF ATHENS.

Can you survive long enough to turn Athens into the most feared state in the Mediterranean?
Train troops, build warships, fight battles by land and sea against hostile Greek States and the vast Persian Empire. Many more features in this very addictive game.

Price: DRAGON £6.95 ZX81 £4.50 SPECTRUM £5.50

## 2. ROMAN EMPIRE.

Your aim is to conquer the hostile countries surrounding Rome. Build armies, appoint Generals and fight campaigns. This challenging game takes full account of morale, fighting efficiencies, leadership ability, etc. 3 levels of play.

Price: ZX81 £4.50. Spectrum £5.50

## 3. PELOPONNESIAN WAR.

Set in Ancient Greece from 431-404 BC, covering the great War between Athens and Sparta. Your goal is a final victory over the Spartans but you will need all your skill in a combination of diplomacy and military force before you even stand a chance. 3 levels of play.

1Price ZX81 only $\mathbf{£ 4 . 5 0}$

## 4. SAMURAI WARRIOR.

om Samurai and bandits.
Are you a survivor? Or will you be forced to commit ritual suicide? 7 levels of play. A most fascinating game.
Price: DRAGON £6.95 ZX81 £4.50 Spectrum $£ 5.50$
5. WARLORD.

A challenging game of analytical skill, set in 13th century Japan. You control a village and must meet attacks from other armies, combat challenges from other warlords and their Samurai; attack and defeat pirates, make raids for gold or slaves and feed your village.

Price: ZX81 £4.50. Dragon available December
Cheques and POs please, made payable to: M. C. LOTHLORIEN

## DO YOU PLAY TV GAMES?

It could cost anything up to $£ 1000$ to own your own comprehensive library of cartridges for your TV games console. We have such a comprehensive library for most systems, and are prepared to offer this facility to you at low daily rentals, with the option of purchasing at Special Discount Prices those cartridges which give you most pleasure.
For further details please send a large S.A.E. To E\&E ENTERPRISES, P.O. BOX 8 , SALTASH, CORNWALL PL12 6 YU.

## NOW, HOW WOULD MAGEIE DO IT? <br> GREAT BRITAIN LTD

Take home finance packages one step further and you have a home economy game for prime ministers to try their hand at.
In Great Britain Ltd. you are cast as the heroine of the tennis club - that's right our very own first lady - Prime Minister Mrs Margaret Thatcher.

You have just five years until the next general election in which time you must convince the fickle electorate that you will be the best bet for the following five years.

The computer provides information on the current rates of inflation, unemployment, dollar exchange, and the balance of payments, as well as details of current wholesale prices, average income and the retail price index.
You have a number of policies at your disposal as you wrestle with the gloomy downward spiral in the country's economic performance. Various forms of taxation can be tinkered with in an attempt to reduce inflation and unemployment.

As if the country's economic problems were not enough for the hero of our game to worry about, there are also a number of unforeseen catastrophes which could upset public opinion anytime.
After five budgets, or before, if things have gone disastrously wrong, a general election take place. Your success in this

## HUNTING PINK

It's all the fun of the fair in this amusing new arcade type game for the 16 K Atari computers.
The idea of Shooting Arcade is quite simple - all you have to do is shoot all the targets before your ammunition runs out.
At the start of the game, you are confronted with six rows of different targets which criss-cross in front of you.
The first row consists of a row of pink elephants which stomp their way across the screen. Above them is a row of waddling ducks opening and closing their beaks. Next is a row of hopping bunny rabbits.

After this things begin to get a little more difficult with revolving faces changing from happy to sad. Hit a sad one and another bunny rabbit will appear.
The next line is a row of targets which when hit will reverse the flow of fairground invaders. The top row of diamonds are valuable targets worth bonus bullets.

will depend on your efforts previously. If you win, you get to run the country for a further five years - although you may look on this as more of a punishment than a prize.

The game may be good training for future Chancellors of the Exchequer or to shut-up that drunk in the pub who always claims that the country's problems would be over if the government would abolish all taxes, but I found it far from addictive and somewhat simplistic. I feel generally that the game has little appeal.

Running on a BBC Model B, G.B. Ltd. is from Berkshire-based S. W. Hessell Software and costs £5.95.

- Getting started 8

## - Value 5

- Playability 5

## 

## SHOOTING ARCADE

On clearing the entire screen, the player is confronted by a huge bear (wearing a hat) which dodges from left to right when hit.

The game uses high resolution colour graphics making good use of the machine's colour and graphical capabilities.

Despite the game's excellent graphics I found the game rather unimaginative and the sound effects were particularly disappointing.

Complete with six skill levels Shooting Arcade is a reasonable, though far-fromoutstanding version of this type of game.

The game runs on an Atari 400 and is available from London based Computer Magic at $£ 20.50$.

## NEVER MIND THE QUALITY...

If you think that four games on one side of a cassette tape sounds too good to be true then you are proved right by Games Pack 3.
Mind The Meteors challenges you to steer your spaceship safely through a meteor storm. Trouble is the meteors are not meteors at all but simply a number of stationary asterisks dotted around a rectangle which occupies exactly half of the screen.
The spaceship is pretty unimpressive too. Just a tiny little arrow. This game was so easy I mastered it on my fifth go and found it so boring from then on that I quickly loaded the second game on the tape - Daylight Robbery - to see if it was any better.
Alas no. The game offers an interesting idea - you have to raid as many safes as you can and get away with the cash escaping through the maze exit, before the guard can grab you. As with Mind The Meteors the game was spoilt by hopeless graphics. The safes are dollar signs, you are represented by the letter 0 , the guard by an I, and as with all four games there were no sound effects. This was also a frustratingly slow game to play.

Battleships is a good game, but I did not feel that this computer version was any

## BEWILDERED, BOTHERED, AND BAFFLED <br> MASTERMIIND

You would think wouldn't you that a well known TV quiz programme such as Mastermind would convert well to a computer game.
Strange then that Mastermind - the latest offering from Commodore - should be such a poor offering.

Here are just a couple of examples.
Question: What have A.AB. and 0 in common. If you think the answer is types of blood or blood type you would be wrong. The answer is blood types. Therefore the answer given by yours truly was wrong according to the book of Commodore.
I wouldn't mind if the thing was at least consistent, but a two word answer was given as wrong if the answer in the data base was one word, ie. Marquis of Queensbury: wrong. Queensbury: right. Fly Fishing: wrong. Fishing; right.

But just when you think you have cracked it and answer Weismuller for the first Tarzan you find you have been double crossed and the correct answer is Johnny Weismuller.

## GAMES PACK 3

better than playing the game with a pen and paper. The submarines, destroyers, cruisers, and carriers were all represented by the letters ' $S^{\prime}, D^{\prime}, C^{\prime}, ' A$ ' - a bit disappointing considering the exciting comicstyle illustration of a submarine on the cassette inset.
The final game on this cassette was Invisible Invader which enables you to draw long lines of asterisks across the screen. Again the graphics are disappointing - your "spacecraft" is an asterisk. The "Invader" as the titte suggests is invisible, which is just as well really, for if it had been visible I feel sure it would have been an asterisk too.
Games 3 is just one of a series of four games packs from ICL for the Sinclair Spectrum. The cassette is available from larger branches of W. H. Smith at $£ 4.95$. If the others are all like this then games packs one to four certainly won't be on my shopping list this Christmas.

- Getting started 7 .
- Value 2.
- Playability 1.

I am not sure how many questions there are on each data tape but after a while life gets boring seeing the same questions appear time and time again when picked at random.

BBC Masfermind runs on a Vic 20 with a 8 K or 16 K ram pack expansion. It is in the shops now at $£ 9.95$ for the basic package plus $£ 1.99$ for specialist subject tapes.

## Why not spend Christmas with the Genie Family!

## Our ingenious range of small computers, accessories and software make ideal gifts for 1st time buyers or committed hobbyists!

## Genie I

Tried and trustedl - The Genie I is still one of Britcin's best-selling small computers, with over 14,000 sold, and it's easy to see whyl Soltware compatibility with Level 2 BASIC means there are literally 1000 's of programs on the market ready to run on the Genie, including
educational, leisure and small business
applications. If's easy to expand, with a vast range of accessories to perform many functions - you only have to read this ad!

Genie I is the ideal computer for the first time buyer, to use at home, at school or at work. The simple BASIC language enables you to write your own programs with ease, and the Microsoft Extended BASIC offers many powerful extra features.
So, if you are not lucky enough to own a Genie I, or if you have a less powerful small computer and want to upgrade, go along to your local Genie dealer, or phone us for advice. It could be your first step into the enthralling world of microcomputers.

Genie II
Equally popular and totally reliable! - The Genie II is a breakthrough for small business computers. Hamessing all the advantages of the Genie I, including its low price, Genie II adapts perfectly to commercial functions with the addition of the following features
$\star$ Numeric Keyboard *Specific Business Commands $\star$ Four User-Definable
Function Keys $\star$ Expandable via the same Genie peripherals \& Extension to BASIC.
Genie II is an ideal finst-entry, computer for the small business. Comer shops, professional practices and small manufacturers cm all benefit from a Genie II business system. For further advice, see your local dealer, or contact us direct!

## PRINTERS

The EG 3085 is quiet, fast and efficient. Printspeed is 100 characters per second and printing is bi-directional at 80 or 136 characters per line. Suitable for use with other systems, it has three typestyles, adjustable pin or friction feed and single sheet or roll paper facilities. £425 plus VAT.
If you don't want to pay that much for a printer, consider the EG 603 . It doesn't match the EG 3085 in certain creas, but you will still get 100 c.p.s. bi-directional, a range of character styles, forward and reverse feed and pin/friction feed, with 96 characters and 64 graphic pattems. £235 plus VAT

## BROTHER HR-1

## Dcisywheel Printer

You can now buy a superior daisywheel printer for a price only previously associated with dot matrix models.
The Brother HR is an enticing addition to your system. It has a print speed of 16 cps , range of 8 typefaces, and a choice of two models with either parallel or RS232 interfaces.
Reliability, durability and attractive appearance make the Brother HR-1 probably the best printer buy this Christmas!
£650 - VAT

## EQUIPMENT COVERS

Beat the dirt, coffee spills and sticky fingers when your computer and monitor are not in use with these top quality black leather covers.
Genie CVI £5 plus VAT.
$12^{\prime \prime}$ monitors CV6 $£ 6.20$ plus VAT. $9^{\prime \prime}$ monitors CV3 $£ 4.20$ plus VAT.

## GENIE MONITORS

Two good performance, low priced $12^{\prime \prime}$ monitors, either to match your Genie or compatible with a wide range of other systems. Good resolution and band width and, of course, they free your television set for the other type of programmes you like to watch!
The EG $10012^{\prime \prime}$ in black \& white costs £69 plus VAT.
The EG $10112^{\prime \prime}$ with green phospher is £79 plus VAT.

## A.V.T.

## MONITORS

Avcilable in $9^{\prime \prime}$ and $12^{\prime \prime}$ sizes, with white, green or amber display, Lowe A.V.T. monitors are sturdy, attractive, easy to operate and feature an easy view screen with smoked anti-glare display filter. Compatible with most popular micros on the market. From $\mathbf{E 7 5}$ plus VAT.

## HIGH RESOLUTION

## GRAPHICS

Increase graphic resolution capabilities on your Genie seventy-three fold with the LE18 HI-RES unit It offers bit image graphics of 73,728 points, a resolution of $384 \times 192$, and uses a separate 16 K of video memory to achieve its resolution. Graphics are intermixable with text or existing pixtel graphics, and mimation, reverse video displays and use of programmable graphic characters are possible. £86 plus VAT.

## TECHNICAL MANUALS

Full technical details of Genie Hardware (all you ever wanted to know about Genie).
Genie I/II Technical Manual
£10-No VAT.
Expander and accessories (EG3014)
£10-No VAT.

## EXPANDER BOX

The updated EG 3014 expander box allows for up to four disk drives with optional double density. It connects to a printer, or RS 232 interface, or S100 cards. Not bad value at $£ 190$ plus VAT
( 16 K version) or $£ 200$ plus VAT ( 32 K version)
*The EG 3014 will work with TRS 80 by using the EG 3023 Tundy Adaptor.

## DISK DRIVES

If you want fast, reliable program storage true random access file handling and access to many computer languages, we com meet your needs. The EG 400 T provides storage of up to 184320 bytes per floppy disk and comes complete and tested, in a stylish colour matched cabinet. $£ 220$ plus VAT.
The EG 401 AT offers dual disk drive with 368640 bytes of useable storage and comes complete with a power supply ready to connect to an expander box £365 plus VAT.

## DOUBLE DENSITY ADAPTOR

Allows the use of standard minidisk drives in double density, with virtually double the storage capacity. The EG 3021 is equally at home in the Genie or TRS-90 expander boxes.
A double density disk operating system will be needed, such as smalLDOS provides. £72 plus VAT.
small.DOS
Powerful, yet reasonably priced, the Genie smalL.DOS contains 21 library commands, 7 utilities, LBASIC, disk basic and bags of information, including a reference manual and 40 page beginners quide to disk usage. $£ 35$ plus VAT.

## BUSINESS SOFTWARE

Specitically written for the Genie II computer, with disks and a suite of packages from the renowned house TRIDATA The suite includes SAIES LEDGER PUBCHASE LEDGER PAYROIL and STOCK CONTROL Each package is a very reasonable $£ 175$ plus VAT. Full details on request

## Chesterfield Rd, Matlock Derbyshire DE4 5LE

Tel 06294995 Telex: 377482 Lowlec ' G

## EG 3203 TANDY-BASHER

Ii you are a TANDY user, read on! The EG 3203 is bus converted to allow Genie peripherals to be used with Tandy Model I computers. £18.40 plus VAT
Oust in case there might be a few strange souls who want to convert in the opposite direction, there is the $50 / 40$ converter which generates a Tandy compatible 40 way bus from a Genie) E34 plus VAT

## FRED MUSIC SYNTHESISER

Beethoven might well roll over at this stereo music synthesiser, it can produce six simultaneous notes over the whole cudio sunge and provide sourld effects. FRED comes complete with a software compiler, full instructions and $\alpha$ demo tune It is simply plugged onto the Genie 50 way bus and has two outputs for an audio amplifier. £51 plus VAT.

## EG 3016 PARALLEL PRINTER

 INTERFACEThe EG 3016 is a simpler interface allowing a Centronics parallel compatible printer (EG 603, EG 3085) to be connected directly to the Genie keyboard without the need for an expander box $£ 38$ plus VAT

## BUS EXTENDER

A most useful accessory, allows two bus using devices to be connected simultameously to the Genie - when using the Hi Res and expander for instance. $£ 21$ plus VAT.
EP1, EP3
Genie I and Genje II have ROMS offering 13.5K BASIC are custom written extensions contained in EPROMs. You can change these as follows:
EPI Adds all Genie 1 sottware facilities to other Genies, lower case driver, machine language monitor, renumber facility, keyboard repeat and screen print.
EP3Has HI-RES driver soltware with 10 extra HI-RES commands which prevent need to load HI-RES software from tape. All at $£ 12$ plus VAT For Video Genie Systems, the LE-19 connects direct to the Genie bus and allows one of these EPROMs to be fitted extemally. $£ 26.50$ plus VAT
SYSTEMS DESK
Even a compact modular computer system like the Genie benefits from being used on a custom designed system desk The SDl system desk is designed to accommodate a complete Genie System and has a special
upper shelf to support
the display monitor at the best level. The desk is flat packed for easy delivery and finished in attractive
teak and charcoal colours. £81.40 plus VAT

# GAMES BOOKS tohave fun withyour Apple ATARI and PET 

ATARI ${ }^{\circledR}$ Games and Recreations
Herb Kohl, Ted Kahn and Len Lindsay
Beginners and advanced users will have hours of fun using the preprogrammed games provided, with charts, flash cards and graphs. For the ATARI 400 and 800, this book also has a special section on graphics, sound and colour features.
$\square$ £11.95 338 pages 8359-0242-0

## ATARI ${ }^{\circ}$ PILOT for Beginners

Jim Conlan and Tracy Deliman
Full instructions and programs for using the new computer language PILOT on the ATAR1400 and 800 are given. PILOT is designed to let beginners program quickly through games and experimentation, so that music, colourful moving pictures and mathematical games can be created with ease.
$\square$ £11.95 230 pages 8359-0301-X

## Kids and the Apple

Edward Carlson
Illustrated throughout with cartoons, this lively book for children teaches Applesoft BASIC on disk based or cassette Apple systems.
$\square$ £15.95 224 pages 8359-3669-4

## PET Games and Recreations

Mac Ogelsby, Len Lindsay and Dorothy Kunkin Games of chance, word and number games, plan-ahead games and tricks for your PET to perform are included for children and adults, beginners and advanced users.
$\qquad$ $£ 10.35256$ pages $8359-5529-X$

Prices are correct at the time of going to press but may be subject to change.

## Book Orders

These books can be ordered from your usual bookseller, or in case of difficulty from:

## DRAGON

 TRS COLORTANDY
BBC LEVEL 2

## AWARI

* The ancient African game of logic. It takes 2 minutes to learn the rules but far longer to master the tactics.
* Select the 'Goat-herd' level of play and it's an addictive game for children ( $8+$ ) that exercises their minds - not their laser fingers.
* Select the 'Witch-doctor' level and it's a threat to your sanity. We haven't beaten it and we wrote it!

## ADVENTURE

$\star$ Over 200 places to explore in this machine code game using advanced data compression techniques.
$\star$ No random elements - you will need skill, cunning and a sense of humour as you explore caves, forest and castles.
$\star$ Evade ruthless pursuers and overcome a host of obstacles.

* Multiple word commands and single letter abbreviations.
* $\star$ Buy both Awari and Adventure and enter the 'Foilkade Challenge' competition. Details with cassette or send SAE.

## New from Mr micro

V.S.L. - You may be familiar with some of the many tune playing programs available for the Vic but we now offer something which takes the Vic to new musical and sound heights. VIC SOUND LANGUAGE or V.S.L. gives full control over the sound envelope of its attack, sustain and decay and volume. In fact, V.S.L. converts the Vic into a sound synthesizer. Once loaded the new fully tokenized command can be incorporated into other programs to make sound effects effective and music musical. The package includes versions for any expanded Vic, sample performances and instruction manual. £10.95 Inc VAT.
VIC TINY BASIC COMPILER - produces true 6502 code. Sub-set of BASIC supports all floating point operations. Compiler listing optional if you have memory ( 8 k exp). Req. $3 \mathrm{k}-8 \mathrm{k}$ expander. £15.95 Inc VAT
Mr Micro are pleased to announce the following new releases in our popular Vic Value Series.

VIC VALUE NO 2
Alphasquare, Switchback
Rayflection, Micromind - $£ 6.95$ Inc VAT

## T//द思 ZX81 <br> \section*{SOFTKEY 24}

SUPERDEFLEX (48K)
The idea of this new game is to bounce "Sid", the space invader, around the screen into the power pods, keeping away of course from the devil who chases you around the screen. Steer with your Deftex shields, but beware the mines or you mav be buried alivel Superb graphics and fan tastic sound on the 48 K Spectrum only Only f4.95 on cassette +50 p PRP.

RATMANI
Another amazing game from Llamasoft! You are the man under attack by the deadly rats as they fall from the sky. You must dodge the arrows to get to the rats and then squash them with your hammer before they dig under the platform on which you stand, and mutate into devils. Fast action with really fun graphics to make an extremely addictive game, 8 K or large memory expansion needed. Uses Mi-Res f5 00 50p P8P complete with instrue tions

BREAKOUTDEFLEX
Unexpanded package a full feature version of the poputar arcade Breakout plus a new concept in computer games, Deflex Il Both programs on one cassette only $\mathbf{6 3 . 9 5}$.
Fly your Ramjet fighter over the Ande mountain range and protect your llamas from kidnap by hostile UFOS. Features 5 kinds of UFO, controls include up, down, reverse, fire, thrust and smart bomb. Entirely in machine code. Requires 8 K expan nion and joystick $\mathbf{6 8 0 0}+50 \mathrm{p}$ pg.p

TRAXX M/C BK + EXPANSION
This is the VIC 20 version of the brand new arcade game 'Amidar', a cross breed beween the now famed 'Packman' and the game 'Quix'. Att in machine code, fast and fun with joystick controls, uses Hi-Res col our graphics. BK or larger memory expan sir- reeded. Only $\mathbf{f 6 . 0 0}+50 \mathrm{p}$ P\&P com plete with instructions.

This piogram, designed to run on the ViC 20 with any memory size gives you the tacirty of 24 key words on your function sove. list, for noxt etc. Both programs on one cassette only $\mathbf{5 5 . 0 0}$ - 50p PBP with full documentation.
ATARI 400-800
TURBOFLEX
Superb ultra-fast and totally new ball game unlike any you have seen before. Uses ATARI's unique features to the full. Incorporates superb coloursound effects and uses Player Missile graphics. Tabies top 10 scores along with Scorer's name. $\mathrm{C} 6.00+50 \mathrm{p}$ PRP.
GRAPHICS CHARA
GRAPHICS/CHARACTER CREATOR
charactes sets or your very own custom Results ares, or edr the existing sets. modes are fully displayed on screen in reflect, invert, Spenechar features include plied on cassette with data sheet only $68.00+50 \mathrm{p}$ P\&P.
2X81
CENTIPEDE (16K $2 \times 81$ )
The ORIGINAL garne from the ORIGINAL author. This is the identical program to that being sold by other companies for three times ouf price. The game has feceived ecstatic reviews in the computiog press. Program has 30 speed levels and
ever increasing Centipede hordes. Tables top 10 scores and their names. Why wait to pay more? Only E1.95 + 50p P8P.

[^5]

## ALLRIAN

1000a, Uxbridge Road, Hayes, Middx.
UB4 0RL.
£21. 50 (f21.70 on disc) Arburoes pacouct

## ZX SPECTRUM HARDWARE

## 24 line programmable Input/Output Port

This new port has been designed exclusively for the ZX Spectrum and utilises MOS technology to minimise bus loading.

The main features
are:

- $3 \times 8$ bit
ports
- Port mapped using IN and OUT commands
- 3 basic modes of operation
- Direct Bit Set/Reset capability
- Outputs capable of sourcing 1 mA at
1.5 volts
- Access via $3 \times 16$ pin DIL sockets and 28 way edge connector

The port is available fully built together with a set of detailed instructions and suggested control applications. The port can either be used with our new Motherboard thus allowing a further card to be used, or with a stackable connector. Either way, it means that Micro-Drives. Printers etc. will run happily with the port.
ZX Spectrum PPI Port
2X 2 Slot Motherboard
ZX Stackable Connector
The prices are inclusive of VAT but postage must be added at 70 pence for a single ifem ( 100 pence for 2 or more items).

## RIR-SERATTREK

## FOR EXPANDED VIC 20

YOU CAN USE 3 K , 8 K OR 16 K RAM Can you pilot a modern jet fighter? Take off from your aircraft carrier and engage enemy aircraft in battle. Shoot them down and then drop your bombs on the enemy aircraft carrier. Watch out - the enemy fighter is trying to do the samel if he gets past your air defence you are left to defend your own carrier with sea-air missiles. You each have 3 jets.

"A REAL ACTION SHOT OF THE GAME"

## SHRRK RTTREK

## FOR UNEXPANDED VIC 20

You are in shark infested waters after being thrown overboard from a pirate ship. Your only protection being an atomic net which you trail behind you, trying to cover all the visible ocean and ensnare the sharks at the same time. Beware of stopping or covering your tracks for too long, it you do, then the sharks will escape and come after you. Watch out for the ever increasing deadly octopi' (sometimes the sharks will eat part or all of onel).

"A REAL ACTION SHOT OF THE GAME"

NEW NEW NEW NEW NEW NEW NEW NEW

You are the commander of a fleet of destroyers... Looking on from the safety of mother ship, you send in one destroyer at a time to blast a passage through the moons of Jupiter. Your destroyers have to dodge, and blast the "U.F.O's"... Watch out for the 'Gologs', they can smash your destroyers, but you cannot harm them

## FTMLTISOLAM GYITTHESIZER

FOR THE UNEXPANDED VIC 20
The Vic Multisound Synthesiser is very flexible and can be played in more ways than can ever be explained here, to create music and special effects. For example, create any tune, up to 255 notes (after following appropriate instructions), then press "F1" or "F3", then key " 9 " and enjoy the added effect. Now hit " + ", listen to the difference. For a surprise - hit "-". Now add a melody over the top - hit key " 8 " then "7" - now play a melody, or experiment. Have fun!

SPACE ATTACK
FOR THE UNEXPANDED VIC 20

Space attack is a game of skill, you, as the pilot of an intergalactic battleship. have to fight your way through wave after wave of various alien space ships

Our games are available trom all good home computer shops, including: all Laskys branches, Micro C. Inside Currys at: Birmingham (233 1105).
