SPECIALS

CITIZEN U.S.A. 19

ACE takes off at dawn and returns with an exclusive report on computing U.S.A. The trip starts here, with foot-long meatballs and a couple of software games whose inventor is a hypertext engine.

ULTIMATE ULTIMA 23

We could about it, Ultima IV is shaping up to be the game of the year. We flew to Austin, Texas for an exclusive preview...

WHEN IN ROME 29

After the earthquake, just before Francisco, Electronic Arts are preparing to shake the world with Centipede — a Roman simulation and strategy title from the designer of *Centipede of the Crown*.

FASTER THAN LIGHT 33

...to PTL for short. Now's your chance to travel to San Diego and meet the people who created *Dungeon Master* and *Dots*.

ON SKYWALKER RANCH 37

Our fearless correspondent leaves casual skiffs, man-eating raccoons, and a private security army to enter *Lucasfilm's creative paradise* and confront the creators of *Loon*, *Monter-Monster*, and *Indiana Jones*.

ONTO THE SILVER SCREEN 41

They didn't come from the Desert; they came from *Geometric's* state-of-the-art CD development system.

THAT'S HANDY! 49

Hand-held consoles are sweeping America. John Cook reports.

D-I-Y STUDIO 105

Who's in the penthouse? Check out MIDI widgets that can make really bad sounds out of few data.

BITMAP BLARNEY 88

Your chance to get a personal invitation to the ACE Conference, and meet some of the big names in the business in person.

POWER TO THE PEOPLE! 11

It's in the title on this page and change history by nominating your favorite games for the prestigious Golden Joystick awards. And win \$100 worth of software into the bargain!

THE ACE TREATMENT

This month's games range from the simple but addictive (*PipeDream*) to the extremely complex (*Knights of Legend*). Every one gets the rigorous ACE treatment...

SILICON UNIVERSE

On page 27, you can find two computer headliners we've deemed one of the most funniest machines ever... a multi-media engine that can scan and respond to events within a room, manipulating data to fit the space with mesmerizing lights and sound. We hope to have a demo at the Computer Entertainment Show in September. Don't miss it!

Two of the images generated by the Silicon Universe... read full details on page 27.

WIN AN

JAM TODAY!

Well, almost...Certainly this could be the most exciting year for computer gamers since the launch of the Spectrum - and every bit as significant. Just as word to press, reliable sources reported that Commodore's 'CD-ROM' Amiga is in fact a CD-ROM console. At the same time, NEC were reported to be seriously considering launching the PC Engine in the UK. The enormous boost that these machines will give to the development of CD-based games in the UK could change gaming history. In America, almost every company is busy developing games either for the FM Towns CD-ROM super-machine, or for the PC Engine + CD-ROM drive. They know that in three years time CD will be THE storage medium for entertainment software, offering not only huge storage and full-motion video, but also the possibility of truly interactive video using CD-I technology. By writing CD software now, these companies are developing vital expertise for the future. Up until now, there has been a danger that the UK would get left behind in this race, but if Commodore do release a CD unit here, everything could change. Our dreams about CD-based games could become reality much sooner than we think... ACE celebrates next month with a special free gift giving complete details on CD games and machines. Don't miss it!

The secrets of Ultima IV development - see pages 104-105.

GAMEPLAY

SCREENTEST 37

What a month! *Player Manager* phases Kick Off up the field, *Shan's* is a startlingly original game from Imaginatics; *Poorman's* is a startlingly unoriginal but awesomely addictive game from Entertainment International.

BRAVE NEW WORLDS 53

Four glorious pages for adventures and followers of the red-rope-straight-and-rudder path. Put *Wingsley* - he checks out the latest fantasy releases and offers some hints and tips for harassed explorers.

TRICKS AND TACTICS 93

No less than five pages of megatips for today's top games. Remember, when the going gets tough, the tough cheat.

When you've got most men down in County.

REGULARS

ACE NEWS 103

SNK launch an astonishing games console that boasts *Motley* game cartridges; Sony launch Data Discman - CD-ROM in the palm of your hand; Amstrad launching new CPC games machines. That's more into CD-I, all the latest from the ACE news team.

MIGHTY MISSIVES 14

Only two pages of letters this month, to make space for our US features...but you made every column inch count.

FREE ISSUE! 84

Take out a subscription and wake up each month to your own copy of ACE - and save money into the bargain.

IN THE PINK 107

This month's *Pinks* feature the return of the ACE Hardware Upgrade Guide: everything you ever wanted to know about the hardware most likely to make your dreams come true.

WIN! WIN! WIN!

GO TO TOWNS! 44

Yes, it's true: there's a CD-ROM on the front of this issue that could win you the world's most desirable, most exclusive CD-ROM games computer. Find out more inside - and be the first to join the CD-games revolution!

ACTION AND STRATEGY IN THE DRAGON

The first fantasy role-playing epic set in the legendary game world of Krynn.

CHAMPIONS OF KRYNN

CHAMPIONS OF KRYNN improves on the award winning game system used in TSR's mega-hit POOLS OF RADIANCE and CURSE OF THE AZURE BONES.

The war of the lance is over, but evil is a BAD idea... with the Dragon armies defeated and the lands in the east reconquered, the forces of good have withdrawn and settled down to a well-earned rest. Evil plans however, never rest and have been quietly plotting a counterstrike to return to power! Their goal: nothing short of establishing the Dark Queen, Takhisis, as undisputed ruler of Krynn!

AN ADVENTURE IN THE DRAGONLANCE WORLD OF KRYNN

Welcome to the first AD&D computer campaign. Prepare for fierce battles and brilliant war tactics: the forces of Whitecloak clash against the evil Highborn Dragon-ones. The Peace absolutely rules over all Avalon in the DRAGONLANCE® game world of Krynn.

WAR OF THE LANCE

IBM 486/386
DISK
APPLE II

Send forth your diplomats to forge treaties, and gain allies that will swell the numbers of your troops — for when levels fall, armies of humans, dragons, elves, dwarves, elves, dragons and other creatures may prove very persuasive. Enough said. Let the WAR OF THE LANCE begin and the forces of good and evil battle for ultimate supremacy!

Advanced Dungeons & Dragons

In the magical world of Krynn, eight brave companions (five Dragonborn warriors, a half-orc wizard, a mage and the ancient dragon Kharis) are seeking the previous state of Aethelred!

Can you help them find the last great treasure of Krynn? ... or will you be the one to destroy it?

Can you help them find the last great treasure of Krynn? ... or will you be the one to destroy it?

Paladin, Queen of Dragons, and the Dragonborn Riders conquer much of the homeland of Krynn. Even the evil armies of Qualin, reborn in the substance of his evil power, struggle on the edge of defeat. History of the Lance comes forward ... in Krynn will history be consumed by evil?

ACE NEWS

CD-ROM 'BOOK' ANNOUNCED, FIRST CDI GAME, NEW AMSTRAD CPC

PORTABLE POWER FROM SONY

Special thanks to Matsushita Hitachi and ARIEL Corporation for their assistance

Sony has unveiled a prototype portable CD-ROM "electronic book", a 350-page palm-sized unit with built-in LCD used to display text stored on a normal audio Compact Disc. Data Discman had its public debut at a future technologies exhibition in Tokyo last month. Although no price or availability details are currently available, Data Discman will be used to electronically manipulate vast amounts of text data — such as encyclopedias, telephone directories or even the Bible. It's also expected to double as an audio CD player.

The Data Discman technology currently being developed could eventually lead to a portable CDI multi-media unit — capable of handling audio, video and computer graphics. A first. Sony is hoping to create a standard for these "electronic book" technologies by announcing the Data Discman early in its development. Expect to see a full feature consumer version of the Data Discman in your local store within the next two to three years.

Meanwhile, Sony has also announced a revolutionary new portable computer. The Palm Top has a 68000 processor, 2MB RAM, and an innovative "keyboard-less" concept that uses touch systems which replaces the conventional

keyboard and mouse. This system can even understand Japanese hand writing — including the complex Hiragana, Katakana and Kanji alphabets. The Palm Top is due for mass production this summer, with units on sale in Japan by Christmas. Its price details are currently available.

NEW WORLD CONSOLE LAUNCHED

SNK, the Japanese arcade manufacturer responsible for the blockbuster *Rail Wars* coin-op, is developing a new 32-bit console which promises to be the hottest deck this side of a cyberspace CD unit.

The NEO-Geo New World console is powered by a 68000 main processor and 256 support processor. It can handle games cartridges with an astounding maximum storage capacity of 358-megabits — that compares to the humble four-megabit (32,768) game carts found in Super 16-bit Japanese consoles. NEO-Geo also uses IC technology (see **NEO-Geo-ACE** on page 11) for further detail to drive player stimulation like game fixators.

Its coupled with advanced graphics and sound hardware will effectively give the NEO-Geo the power of an arcade machine in

your own home — the gameplay is ultimate stream machine. Industry rumors even suggest that NEO-Geo will come as both a home-based and coin-operated video games system.

The console will be launched in Japan at the end of the month, priced around £290. SNK will initially release six 48-megabit games carts, priced at a staggering \$130 each. This makes NEO-Geo carts the most expensive home video games ever released. Interestingly SNK doesn't see this as a problem and is predicting Japanese sales of 500,000 NEO-Geo consoles and 1.2 million game cartridges by early '91.

Details of the forthcoming NEO-Geo game titles and exact specifications of the console were not available at ACE. Sent to press — SNK in Japan told us: "We're not ready to provide you with the information required. You will hear from us sometime around late spring". Look out for further NEO-Geo information in future issues of ACE...

ADVANCED CPC OUT IN SEPTEMBER

Amstrad is due to launch three new games machines — including a console — based around its console CPC micro later in September. The console is expected to sell for around £100.

The advanced CPC's exact specifications and price details are unknown at present — console will officially confirm these new machines — but their existence has been revealed to ACE in all the recent conversations with various software developers. Amstrad itself was unavailable for comment as ACE went to press.

The CPC484 Plus, CPC6128 Plus and CPC console will replace the versions of the CPC currently on sale. These technically improved models should contain a faster main processor, hardware support for graphics — including sprites and hardware-scrolling, increased colour palette and a channel stereo audio.

The CPC Plus machines will be compatible with all existing CPC software — they'll also run unemulated games software. These carts will have a storage capacity of two-megabits (16,384), priced in the region of £29-£30.

Several titles are currently being developed, and a selection of CPC games cartridges should be simultaneously released with the machines in September.

TITUS PRODUCES CDI GAME

Although no Philips/Sony CDI play it will be commercially available before '91, Titus — the French games developer that made *Conan Quest* — has produced one of the first games for this new multi-media device.

Then, an arcade puzzle game, was first released on all major micro formats last year. The CDI version was started last summer and took four months to develop using the original Macintosh game source code as a basic foundation. The CDI version includes audiovisual enhancements over its micro cousins and a new intro sequence. You can hear the choice of CD-quality classical or rock soundtracks during play.

The game cost a hefty £250,000 to develop — Titus used Interactive Support Group's ISO 200000 Macintosh-based CDI development. In fact, Titus exclusively distributes the ISO CDI emulator in Japan. Its only real system is Mac-based and costs over £100,000. Eric Carr, Director of Development at Titus told ACE, "Many use the ISO product as the perfect CDI emulator". Japanese companies like Panasonic, Technics and Toshiba may use the ISO system to develop their CDI products in the near future.

Titus has also produced a version of *Time for Tejuhu!* for the Tandy 32-bit CD-ROM computer for further FM towns information — and a chance to sit in a machine — turn to page 44 which tells for around £40 in Japanese stores.

On CD-based interactive entertainment, Carr says: "It's important to be first. This is the market for the future. There are currently no games designers or engineers in this field. Small companies will find it hard to fund the huge development cost".

Now Titus has started work on a new CD game project which will take about 15-18 months to develop. As yet no untitled game will be written for most CD decks including FM towns, PC Engine, and the forthcoming CDI

Light and Magic — who both produce computer graphics images and special effects for movies and television. The heavy graphics will be rendered on a Cray mainframe system and transferred to micro format or recorded straight onto CDV Compact Disc Video in the CD version. Game authors, "it will be one of the most exciting games on CD..."

MIDI MUSIC SHOW

Large MIDI musicians should check out the MIDI Music Show at London's Pleasure in Harmony with its 7th and 8th April. The exhibition will include over 60 computers showing off the latest MIDI hard and soft ware from the UK, Europe and USA. There will also be special seminars, demonstrations and conferences covering such subjects as sampling, creative editing and sequencing. For further details contact the show's organisers, Westminster Exhibitions, on 01 549 4445.

FLY A DRAGON

SSI, the leading American strategy software developer, is releasing the world's first Dragon flight simulator next month. Dragon Rider is being distributed over here by US Gold. Good old USG still saying that much about the game yet, except that it's another SSI's Advanced Dungeons & Dragons (AD&D) release, giving you the respect of calling on the back of a Dragon. Like other SSI products, Dragon Rider will be released on PC first — closely followed by C64 — with an Amiga version due later in September.

SSI is also working on another TIA-based product. Jack Rogers the 25th Century role-playing game is due out on PC and

Dragon Rider: the world's first Dragon flight sim

C64 this Christmas and uses the same game structure as Pool of Radiance. An Amiga version is scheduled for release in early '94. Unfortunately there are currently no plans for an SF version, although Pool of Radiance may eventually come out on the SF sometime this summer.

InterFace America from Redbox

• Konami, a major Japanese gaming manufacturer and official Nintendo licensee, has enlisted the help of a reality team to promote video games. Charles Robinson, a member of two Nintendo game shows and holder of a Master's Degree in educational psychology, is touring America on behalf of Nintendo, offering video game advice to parents worried about the type of games their kids are playing and the amount of time they spend playing video games.

• Midway is releasing a Gateway game featuring powerful personating aliens in the local Japanese city of 'Raiden'. Raiden: Alien is due out in May.

• In the ever growing range of Nintendo-licensed products and entertainment, lucky Americans can go and see the Super Mario Bros. on ice skating rinks.

• PCI has unveiled Heroes of the Lance Add2 MPU for the Nintendo 64.

• Sabotage's ATP (Action Transport) lets you fly a Boeing 737, 747, 767, or Airbus A300 or an Air Force 1 simulator. ATP includes over 350 US cities with services to 25 major city airports, automatic weather generation, Air Traffic Control feedback and 10 types of airborne traffic. The PC version costs \$49.95.

• Game's classic C64 shoot'em up, Whiplash, is due to be released on the Nintendo 64.

TITAN CDI TECHNOIR

Titan CDi was developed entirely on a 680 Macintosh CDi exploration in four months. It was written using a Macintosh fix under MPW support with ROMs hardware, and test run on Macintosh. JAMS SCS connectors for spin load on Philips JAMS. CDi Titan's game code is less than 100K, plus 500K of graphics and a massive 120MB of sound data. The flying ship in the intro sequence was designed using several 3D graphics packages on a Macintosh fix. Studio/II files were converted to DPM and DUT formats. The music tracks were composed on a W32 Roland keyboard and digitized on a Macintosh fix using the Digidesign board. The mixing of the sound was done using Sound Designer. PCM data was converted to A/DMP on Macintosh fix. The sound in the game is lower 8 stores. The game's compact disc was compiled and installed on Macintosh fix using the 680 CDi board and first studio software. All the tools used were developed by SCS and are based on either original or green book algorithms. You can use both the CDi remote control or mouse for game control, and the game is compatible with any 625-line monitor and runs on current versions of the Philips (JAMS) player. The project director was Regis Nelson with software by Lee Chellogis, CDi simulation software by Jim Bangerter and CDi hardware board by Vincent Le Chateau.

ARE YOU A EUROPEAN SOFTWARE DEVELOPER?

ACE will be featuring an article on European Advanced Computer Entertainment in a future issue of the magazine. We want to contact West and East European software developers — game designers, programmers, graphics artists, musicians and software companies. If you wish to be included in the article then write including your details to: ACE, EUROPE, Priory Court, 30-32 Fawley-

don Lane, London EC1R 3AH. Alternatively fax us on 01 490 0960.

THE PRESENCE OF THE FUTURE

The next time you walk down the Champs-Élysées in Paris check out a small store called Burel. The Presence of the Future. Among the cordless telephones, back to Flowers and Sony Discman you can look up a electronic gun able to pump out 45000 hits, and surveillance equipment for industrial espionage.

NEW ON NINTENDO

It's a shock admission, charming too good and teeny-boppy heartthrobs. They have owned up to playing Nintendo games. So the next time you go to a disco, concert look out for Matt Doss, playing with his Gameboy!

A whole new meaning to Super Mario Bros.

In fact, Nintendo gamers include a Who's Who of Hollywood stars: Tom Cruise, Robin Williams, Tim Rinko, Michael J. Fox, Kurt Russell, Jeff Goldblum, Gaille Hawn, Matthew Broderick, Rebecca Goldberg, Don Johnson, Robin Green (Olympe) and Henry Winkler (they remember the Fonzi) and Bruce Willis.

Unfortunately for nobody UK

gameplayers, Nintendo isn't officially releasing the super-sized Gameboy handheld console in this country before September.

95% of all children in the Granda region watched the Nintendo TV commercials an average of 8.6 times over the pre-Christmas period.

Quadrant is selling a mighty sweet addition for the Nintendo

N64 Zapper gun. The deluxe lighting scope has an extra large eyepiece for fast, accurate aiming and a precision range adjustment.

Do you need some tips on your latest Nintendo N64 game? Then give the Nintendo Helpine a call on 0800-870500. They'll be able to give you advice on all games officially released in the UK. The helpine is open on weekdays from 9am to 5pm (closed on Wednesday and Sunday), and from 9am to 5pm on Saturday.

How quadruple lighting scope can help blow your head clean off - see you, first lucky game!

TOYS 'R' ACE

At the recent British International Toy & Hobby Fair at Earls Court some 500 exhibitors showcased their toy and hobby products for Christmas '90...

WOODPECKERS

from Tomy

"Just arrived from outer space! Soft and silky, adorable and appealing, alien who love talking to little children in their home, happy 'wocky' alien language! These innovative and imaginative mini-operated 'space visitors' produce delightful random chirps, chattering, whoops and whistles in response to human voices. Young children will find Woodpeckers simply out of this world. 'Seheeee!' down to your local toy shop and behind one of these is the cuteness today!"

COUCH POTATOES

from Potato Creations

"They took America by storm! Now they're set to invade Britain! You are going to see them every where - anywhere there's a TV set! You're going to hear about them from the most unlikely source! Couch Potatoes need special care! Never feed them quick! Always stare as they're seated upright for their favourite programmes. Only talk to them during commercial breaks."

COMPUTRAIN

from Mattel

"The smart train of the future is here for play! Computrain combines the sophistication of up-to-the-minute technology with the simplicity of child's play. Easily

assembled and operated, Computrain is a battery-operated train with a computerised control car. Using simple bar-code lines that easily attach to the track, the child is able to program Computrain to flash, honk, sounds and lights. Computrain responds instantly to the commands the child programs into the track, giving immediate feedback. Fun to plan, program and play, Computrain is tomorrow's toy - today!"

HITMAN

from Mattel/Hasbro Toys

"Get in with Hitman! Nothing amazes children more than seeing, unexpected and sometimes vulgar, noises! With the new Hitman from Universal Mattel/Hasbro, children can deliver all kinds of crazy sounds simply by pushing a button. For Hitman presents a breakthrough in electronic sound chips which makes the reproduction of noises sound amazingly real - like it's a buzz or a buzz! Computer-sized Hitman fits easily into most pockets so it's affordable and children can carry it with them ready to deliver their surprise noises - creating a few laughs, or even teased eyebrows! Hitman comes in three versions: Outrigger Hitman which makes air hummer sounds such as a buzz or a whine. Smiley Hitman - giggles noises to try to scare brothers, sisters and friends. And Mean Sound Effects - which with its screeching tyres and other action sounds make endless amusement! Hit Stop not your level set - Hitman is here!"

DEEMIE DINO AND DUCKLEY DUCK

from Bandwag

"Deemie Dino and Duckley Duck, Bandwag's new radio-controlled toys, move forward, left and right at the touch of one of three responsive arrow-shaped buttons on the remote control set. When speaking into the microphone of the unit, both toys transmit the speaker's voice within a range of 20 feet. Each toy also features a synchronised sound effect, built-in receiver and amplifier, and three interchangeable eyes that give both Deemie and Duckley three different expressions."

TECHNO-ACE

"The first affordable videorecorder technology with the new videorecorder - from people like Videorec - for more intense video games." William Gibson, award-winning cyberpunk author

Hughes Aircraft is licensing its IC integrated circuit sound system - capable of reproducing the original amplitude and dynamic range of a music video in live performance - in several electronic music distributors. The system accomplishes this by recording and playing back spatial sound - giving the listener a more realistic sound sensation. The Sound Retrieval System is already in use in a new range of laser videorecorders, and is likely to be incorporated into other electronic products, including games consoles and computers, in the near future.

JVC is working on a CD video system able to record a full-length movie on just two 12" disks. This is achieved by converting the analogue video signal into compressed digital code. The clever part of the system is the way it uses a computer to analyse the original video signal and record only the changes that occur to that picture over every six frames - the system retains one 'key' frame and sends only image change data to the other five frames. This new JVC product enters the ever growing number of competing CD systems - including JVC's rival Sony/Philips' CD-i and IBM/Intel's OVI systems. Perhaps it is a significant factor that JVC's parent company, Matsushita, recently bought an Edinburgh-based company that specialises in hypermedia - a software technology needed in the next generation of interactive CD products.

Revolved Systems has invented a Video Modem that can transmit still and moving video pictures over ordinary telephone-lines. Revolved's current system

uses coded fractal geometry to compress and transmit digitally-coded images, with an 8-bit colour or grey-scale palette and resolution of 256x256, at a rate of 30 frames per second. Once the images have been transmitted they can be reconstructed to any resolution.

Technics and **Fujifilm** have jointly developed a digital still video camera using Technics' IC memory card technology. IC cards are a new credit card-sized storage medium powered by their own battery supply, that they can be plugged in and out of a computer while retaining their data intact for a matter of months rather than milliseconds. The IC Memory Card camera cards each contain 16 integrated chips capable of storing two million characters at a resolution of 400 horizontal lines - that translates into 12 digit subpixels with video pictures per card. Once purchased, these images can be transferred to computer or digital tape - an ordinary 120 minute audio tape could store over 1000 pictures. Technics and Fujifilm eventually hope to develop a system capable of storing over 50 pictures on a single slice of plastic.

Philips Magenta concept car includes many of the features expected to be incorporated in the average family car of the 21st C: new windows replaced by dual backprojecting video cameras, Atlas navigation and including details of local hotels and tourist attractions, car manual on ROM, built-in colour LCD screen with remote control TV, VHS video and CD player, and the obligatory stick-on barbed toy.

Matsushita has launched a new audiovisual inter-communications system for the home. Capable of compressing pictures and sounds, the Panasonic Home Theatre utilizes both enhanced definition processing and digital compression technologies in a wide-screen, digital laser converting, video system. The catch? The £20000 asking price!

ACE LETTERS

YOUR RIGHT TO REPLY...

HYPERCONFUSED

Reading your brilliant magazine one day as an avid reader (and Archimedes dealer) I noticed that the top-gearer Psycho Allen (ACE 30) was running on an Archie monitor - however, I couldn't quite tell whether it was actually running on one!

James Goodchild,
Cripplegate, Essexfield

• Sorry James, our *Archie* monitor for collapsed so we were forced to temporarily use the Archie monitor.

SIERRA-ON-LINE HELP

I have decided to set up a list service for most Sierra-On-Line adventures. I have completed *Leisure Suit Larry 1, 2 & 3*, *Poison Quest 1 & 2*, *Space Quest 1 & 2*, and more. If you want hints write to me - this is, of course free, but please send an airmail stamp in your envelope to cover postage. That's it for now, keep up the great work.

Lawrence Kuchell,
22 James Terrace, Skelmorlie,
Ayrshire, Scotland PA6 7 5AR.

GOLDEN OLDS

I think the 'golden oldies' such as *Jet Set Willy* and its three such a thing anymore is a simple short-cut? *Simon 2* is admitted to, brilliant, but I look back happy on the days when my first boss and I used to play up at night playing *Caliga* on his BBC. Come on you software houses left us games like *Jet Set Willy*, *Smurfs*, *Zeaga*, *Repton*, *Galaxians*, *Sayer's Run*, *Space Plot*, etc on the 50!

John Hawthth,
Milly Walk, London

GOLDEN OLDS 2

Please could you tell me where I could obtain decent versions of the old arcade games: *Defender*, *Galaxians* and *Phoenix* on the OSA. Now I'm a regular reader of ACE I must congratulate everyone involved for producing quite an outstanding publication.

DA Edge,
Great Barr, Birmingham

• *Allegata* had brilliant 'interpositions' of *Defender* and *Phoenix* called *Guardian* and *League Empire*, and Kingsoft brought out *Caliga*, a good version of *Caliga* - a sounder version of *Caliga* - a sounder version of *Caliga*.

DOUBLE THE FUN!

THIS TIP WILL ENABLE READERS WHO OWN THE JAPANESE VERSION OF THE SEGA MAGNETIC TO USE EITHER JAPANESE OR AMERICAN SOFTWARE EFFECTIVELY DOUBLING THE AMBIGUITY OF SOFTWARE IN THIS COUNTRY.

I am the owner of a brand new Sega Megadrive (Japanese model). As I am sure you know, this system is locked to the Sega Genesis in the U.S.A. I ordered two games, and when they arrived they were marked 'Genesis system only'. These games fitted into the cartridge slot, but the machine would not switch on.

After examining the Japanese cartridges (these did work) against those that would not work I found that the difference was that the Japanese machine has a cartridge lock to stop the cartridge being withdrawn when the machine is on, the American machine (Genesis) does not.

So one cartridge **UNLOCKED** has a slot cut in the left hand side of the cartridge about half way up to allow the lock to activate, and the Genesis does not.

REMARK: Put both cartridges side by side and then, carefully, mark where the missing slot should be and slowly file a similar slot at the American/Genesis cartridge with the **thin side** of a woodworker's flat file. **Take your time** in the sandpaper test - you don't want to go into the side of the printed circuit board inside the cartridge!

You will find that if you have added the slot in the right place, and to the correct depth, the machine will now switch on. **NO MORE PROBLEMS!**

Chris Norris, Buntingford,
Hampshire

• We have printed this excellent tip because we believe it will be of much use to Megadrive owners. We must point out, however, that making any modification to equipment will invalidate your warranty (on both the cartridge and the Megadrive). Please do not make these modifications unless you are absolutely sure of what you are doing. Any modifications you decide to undertake are made at your own risk. Have fun!

ately, all these games are old (around 1983) and very hard to find, perhaps other readers could help...

SOFTWARE STEREOTYPING

I've read lots of letters in the past year or two about how sexism is killing the software market for women. I beg to differ! Sexism is not the correct term for the phenomenon which is causing so much discontent - it's really down to stereotyping.

I'm under into a software retailer and, after pursuing the available range, and if 'game n' is available for 'machine g' - it has been examined but doesn't seem to be on the shelf. 'Must not be Modern', comes the response, 'you old is your son!' I'm sure I can find something else for him! 'You son you can't', is my reply, 'because my son is only six and five and you have nothing suitable for him!' I'm buying for myself!

Am I alone in thinking that the vast range of software stocked by local retailers is intended for the adolescent boy, and that even they like back because pretty fed up after a while with the lack of variety in the final gameplay of the

titles pushed down their throats? Instead of the 'Women's Rights' campaigners complaining about the sex and violence which form the core of the gameplay of most software, why don't they complain to Mifs & Bess who run a successful business dealing in this kind of material but are respected by a good proportion of women and men?

Let's have more originality of gameplay, not plot. 'Shoot/lick/blast' isn't an idea when you want to take your frustrations out on the world, but they soon become tedious in an unending slot. I will believe stereotyping is dead when new slot being introduced because a woman is helping them out of their technical difficulties over the phone!

Pat Winstanley (Mrs),
Wigan

• Yes, you are probably correct in thinking that what is often seen as 'sexism' in the software industry does not really arise from any deliberately malicious exclusion of female interests, but merely lack of thought. No-one has really bothered to sit down and consider that the ratio of male to female gamers is rising

steadily evened out with each passing month. The other problem is, of course, that the majority of programmers, game designers, and graphic artists in the industry are male, but this is, in something that may well be changed in time.

WHAT A BARGAIN

After ACE is very kind or perhaps you just need to sharpen your maths. If you hadn't noticed, the price of ACE is now £1.60, so the subscription charge per annum should be £19.20 not £17.95 (over considered buying a calculator yet?)

J Garthwaite,
Harrington, N Yorks

• It just goes to prove what a bargain subscribing to ACE is: 13 issues of ACE for just £27.99, and exclusive offers like ACE Conferences, professional placement and the instantACE quarterly newsletter.

LEARNING LANGUAGES

I am a student at Stenden College, studying for a BPEC National Diploma in Computer Studies. I am learning Pascal at the moment

and wish to purchase an Atari ST compatible Pascal language translator and compiler like Turbo Pascal 5.0.

I would also be interested in purchasing the same in C and C++. Could you please tell me which are the best Pascal and C translators and compilers and where I could get them from.

Last of all I must congratulate you on your production of an excellent magazine with up-to-date information on the computer scene.

Mr. M. Brown, Brixton, Wills.

• Interestingly there is not room here to give a detailed breakdown of the qualities and features of individual compilers. However, we suspect that you try either Huxit (09759 718150) or Prospice Software (09-149 8530).

Both of these companies can supply a full range of compilers. The Prospector range are intended for professional use, and are more expensive, but very well supported. Huxit's compilers are cheaper, and they also produce a C interpreter, which is an ideal tool for learning the language.

ARTISTIC ENDOWMENTS

I am an 'A' Level Art student currently researching the theme

IN BRIEF...

for a potential Docker and I would like to find out more on cooking.

James Shephard, Buxton-to-Farnham, Dorset

• Don't have a word with Bob Hay of PMS? Federation Against Software Theft?

Please hear you get any notices for games reviewers, if not, shoot! Lushness Scotland.

Spencer Hart, Brian (Dorchester, Peterborough)

• The answer is NO! It's practically broadcast anyway, and the name is Don't.

My name is not Sandy Loothe as you quoted in your magazine 990 306

Sandy Loothe, Middlesbrough, London

ACE is good, ACE is wicked, if you don't like it, you're a #BX47492.

• Quoted

Joel Kay, London

'Computer Graphics and the Graphic Artist for my personal study project.

I would be most grateful if you could send me details of how to get in touch with suitable computer artists, as I feel that they could be of great help, and make a valuable contribution to my project.

I would be interested to hear the views of the staff at ACE magazine on the subject of computer graphics. Do you think that computer graphics are an artform in

their own right? Is there any reason for the 'conventional' i.e. non-computer graphic artist to feel threatened by the existence and development of computer graphics?

Full acknowledgement will be given in the final project, and any contribution, no matter how small, will be of great use to me.

Ben Hayward,
25 Sandbury Avenue,
Stockton Heath, Warrington,
Cheshire. WA4 2BL.

• We've printed your full address here so that any graphic artists who feel inclined can contact you directly with their views.

With regard to the computer being used in art, it is nothing more than an extremely flexible and adaptable tool for graphic artists. A good artist won't produce good art just because he is using a computer. The computer is gradually coming to be accepted as an artistic medium in its own right, but I doubt if conventional artists are any more threatened by it than painters who use traditionally mixed oils are threatened by the existence of acrylics. The computer is just another medium. Nothing more or less. What do other ACE readers think?

DO YOU WANT ACE?

We want to hear your views on Advanced Computer Entertainment... What do you think about the design? Content? Artwork? Gameplay? Please write to: ACE, PO Box 124, 22408 Computer Office & Store Ltd, Nelson St, Cambridge, CB2 3PQ, UK. Please send your views on your report card, or write to: Advanced Computer Entertainment, PO Box 124, 22408 Computer Office & Store Ltd, Nelson St, Cambridge, CB2 3PQ, UK. being particularly significant, since it's the first entertainment module to offer a CD-ROM attachment that's actually sold in reasonable numbers. Most companies were either developing or keen to develop programs for the unit.

When it came to CEA, however, there was a lot of confusion and disillusionment. CEA itself has defined by Philips and Sony) had initially created a lot of interest, but after repeated delays most companies had lost interest — at least for the time being. Electronic Arts, who were busy developing CEA titles when we last visited them (over a year ago) have since closed down the CEA division until the machines get onto the market.

Further confusion was caused by the emergence of CEA I and the prospect of CEA/CEB II with full motion video. In general, everyone agreed that had CEA been released as originally planned, two years ago, it would have been a big hit. As it is, we will now have to wait to see which system will be first to achieve a reasonable cost base.

In the meantime, everyone was busy developing game systems that could, one day, be upgraded to work with CEA technology. You can read about these systems elsewhere in this issue.

HYPERTEXTS

Hypermedia taggers, check out last month's ACE is also making a big impact in the States. Many games companies have developed game design systems based on hypermedia. The most complete ones that produced by Comenius, which allows the game designers to store all dialogue and other information in the system and then download it onto any target machine in a form immediately usable by the program code for the game.

This means that, for example, if the designer suddenly changes his mind about the final sequence in *It Came From The Desert*, he no longer has to get the programmer to change the code. All he does is boot up his Mac, make a quick alteration to the relevant scene, then download the new scenario into the program's environment. Special editors "massage" the

Amusement arcades often feature older games than are on sale in the UK. In this one, the brand names Ringo, Ringo, and Ringo are visible.

With just this little, you would say off American isn't it? In fact, it's more interesting. America is one of those countries that use the most advanced technology.

A man in Chicago, Illinois, was so upset when he found his son

sniffing gasoline that he slapped him. Hours later, having taken his son to hospital for treatment, nurses noted the boy's blood alcohol level and reported it to the police. The father was promptly sentenced to four years in jail.

Don't forget! You can see on the News Machine by clicking the month's special competition. Check out the instructions on page 44 and 45, then hit it in your next issue.

Amusement doesn't just shoot off. In this, the shooting gallery, you can shoot at targets.

PEI was just one of many companies using the PEI system to replace their old IBM programming skills. This is Wayne (Helen, founder of PEI), with just one of several games machines created by the company. (Helen, this was her first machine, her second was the first machine to be made).

data on route to ensure that it is compatible with the target machine and the program code.

In fact, Macintoshes were being used for game development in all the companies we visited. One consequence of this is a growing degree of Mac skills amongst programmers and designers, which could — if Apple ever produces a lowered Macintosh — make the machine the number one games unit of all time! It only...

HOME FRONT

Macintoshes were also, despite the longstanding superiority of the PC in America, very popular at home. Most of the users we visited had either got Macs or were planning to get one as soon as finances permitted. What was interesting was that many people with Macs didn't have much expertise in them though users the Brain Crawford — see pic — are obviously an exception.

PCs were everywhere, but again we were intrigued to see how many users still possessed one.

Although many people still use the old standard PCs, 286 machines are the choice in the States these days. In the UK, in this case, we found that the 286 PCs were mostly in use in the home — the only one we found in a shop.

VIPs in San Francisco have been plagued by dirty underpants. Some-one has been posting soiled underwear, complete with accompanying porn pictures, in the city's leading offices.

"It's the most repulsive case we've ever worked on," declared a post office spokesman.

The last month's issue for exploring WCAI, CEA, and other business news. CEA has Philips (and others), released in 1988, and offering different levels of complexity by ranging from simple information video to all with full motion video, computer animation, and full screen interactivity. The first was due for release in Spring 1989 (after a three year delay), and is a more powerful technology currently associated with 3D technology and speed for 3D.

At The Court of Lord British

When Richard Garriott first sold Ultima I by mail order, he probably would have laughed for giggles - he was at very tender years if you'd told him that a few years later his games would be selling tens of millions of copies and he'd be rich and successful beyond most people's wildest dreams. But they do...and he is.

The nice thing about Origin is its origin. Having started small, the company retains a friendly, intimate atmosphere that makes a refreshing change after the larger software companies of the West Coast. 'We're a very other oriented company,' confirms Dallas Smith, in charge of product development, and this is certainly the impression you get as you wander along the same corridors - there's a software designer/programmer coding away behind each door, in his own little world of creativity.

This is completely against all the tenets of the large companies, who now put together programs in teams. Origin is one of the few companies where you can still use a single name as the credit list for a new game. This doesn't mean that teamwork isn't involved - every little beauty from the input of the excellent Origin graphics department and is controlled by a producer - but it is still the case that Origin games tend to be the brainchildren of single creative minds.

WORLDS UNDER WRAPS

Right now there are three main titles under development (or just released) at Origin. The first is the long awaited Ultima VI (see later in this article), produced by Lord British (a.k.a. Richard Garriott, AKA) whom this is probably the game that will finally prove to the world that role-playing games can be every bit as exciting and satisfying as arcade action.

The second is *Star Blood*, programmed by Chris Roberts, who last year brought us *Times of Lore*. This one has more about it later in this article.

Finally, there's a real RPG scenario for GAO systems - *Angels of Legend* which is reviewed in this issue on page 162. We've also included a review of *Omiga* (see page 103) although this was actually released late in 1992.

High in the hills, outside Austin, Texas, the drawbridge thunders down and grants us passage into Castle Origin. Six-foot-tall Texan overlords, brought up on a diet of steak, sausage and ribs, drag us into the presence of Lord British - the creator of Ultima...

CD RPG

The company that brought you *Kings of Legend* and *Ultima* might be the a safe bet for those wondering who will be the first to produce the definitive CD-ROM RPG, but game designer Todd Porter has some sensible caveats to make...

'One of the problems with CD-ROMs,' he points out, 'is access time. *Kings of Legend*, for example, needs lots of data but doesn't need immediate access to it, so a CD-ROM version would offer lots of possibilities. In *Ultima*, however, the moment to map data becomes and would need a lot of work to access satisfactorily with a CD-ROM system. There's no doubt, however, that optical storage will be tremendously useful for fantasy RPGs in large world simulations.'

As a result, the best Origin games are unlike anything from anywhere else. As producer Jeff Johnsonman points out, 'The variety of our products released in 89 is a tribute to what the authors can do.' Other companies are often quick to copy Origin products. 'My friends send me a new *Ultima* clone practically every week,' says Richard, 'I must be one of the most copied gamestyles ever.' *Star Blood* and *Times of Lore* are also highly original game styles, and even *Kings of Legend*, although containing many traditional RPG elements, is different simply in terms of sheer scale.

'We tell people to come to us with their ideas and we'll help bring out the best in them,' says company spokesman Greg Malone - but unlike other companies, the ideas will remain a personal challenge rather than a team production. 'On the other hand,' says Dallas, 'we don't have the luxury of being experimental. What I mean by being author oriented,' he jokes, 'is that we try not to screw around. It's true that as all other companies our authors are no longer self-managing - now they have to get things done on time.'

INTO NEW WORLDS

Origin are moving rapidly with the times. Not only are they producing more games than ever, but they are also moving into the console market, having become a licensed developer for Nintendo Game Boy. There is already a version of *Ultima* on the Nintendo in Japan, which is proving extremely popular. Now Richard Garriott is planning a Nintendo version of *Ultima V* and even a generic *Ultima* for the Gameboy.

Lord British (a.k.a. Richard Garriott) explains time and space with the aid of one of his unique titles: that of *Knights of Legend*.

"Meanwhile," says Greg Malone, "we're all valuing for CD-ROM. The new consoles are pretty impressive too; the Sega Genesis is technically a very nice machine. By 1994, we hope to have a selection of original titles on the Genesis and TurboGrafx-16/CD machines."

Much depends, they feel, on the current congressional investigation into the restrictive practices of Japanese console manufacturers. Most console companies tested software companies to develop games and manufacture cartridges without special - any expense - licenses. However, Electronic Arts (as believed) to have recently "reverse engineered" a Nintendo compatible games cartridge for release in the US.

"We always program for the top flight machines - as we can say 'This is the dream...' and then make it on other formats."

Greg Malone, Origin

BAD BLOOD

Just as Ultima IV is a quantum leap beyond Ultima II, so Bad Blood is a quantum leap from Power of Law. "It's had 190 world maps," says programmer Chris Roberts, "but in Bad Blood we've got a world built of 3800 different cells." The resulting world is a nightmare of post-industrial mutation to humanity (struggles for survival on a barren, blasted plain).

Gameplay involves exploration of varied sites and interaction with other bizarre mutants in a quest to learn more, conquer, or escape.

At the graphics mutants are in abundance: ponds and chicks, which help combine detail with high speed. "We coded the intelligent creatures in C++ - it means a big increase in performance but it's a part of the program where you can't make it, and it bites our productivity."

Watch out for a full review (and review, of course) of Bad Blood in a forthcoming issue of ACE.

Shoring a crumbling stable in a building was the costly technical graphical detail over Time of War.

Origin producers get together - Dorian Shook talks his colleagues about the bad that got away.

The Bad Blood team: Chris Dorian Shook, Greg Malone, and Chris Roberts.

and the American courts will have to decide whether such a floating of Nintendo's strict control of the software supply is legal. If it is, it will open the way for a flood of ambitious, varied console titles - and Origin hope to be up near the top.

Meanwhile, Origin will continue to support gifted authors and game designers in the production of new games. If they're anything like Ultima VI and Knights of Legend, this company is set to head right into the very long time ahead. Let's hope it doesn't spoil them.

A LEGEND IN THE MAKING

David Todd Potts began the design for Knights of Legend over eight years ago and has never looked back. The objective was quite simple: to create the ultimate RPG system for players who demanded all the complexity of a traditional board game RPG like Dungeons and Dragons but also wanted the opportunities and convenience of a computer version.

KOL is the best RPGO (fantasy role playing game) to do things in extreme depth," claims Todd, "and once you've played the game it's difficult to change - you can get some feeling for the adventure in our review on page 52."

The game was put together by Todd, but he also had the help of his now-playing friends, who were in at the start of the project when they first discussed it over a pint of stout years ago. William Todd came to Origin, the first thing he did was to get in touch with his old companions and involve them in the game development.

Todd himself took the research for the game to almost academic extremes. "I went over to England," he recalls, "to study medieval weaponry and castles. I read just about everything I could about contemporary armor, for example. I took in other games when you can simply plant a bit of plain armor - that stuff weighs a ton! Most normal characters who might attempt to wear it would simply pass out from exhaustion. In KOL, you really have to have the muscle to carry that stuff. And the details are there."

The level of detail involved, for example, no less than forty variations to decide whether a creature should have a starting sword. The critical design process is the main components of the game, said Todd, your enemies are highly intelligent. For example, KOL also introduces tentacles, and if you fall in with a top during combat other creatures will soon learn to attack it specifically.

One reason why KOL's size is so popular is the degree of identification you can build up with your characters. Indeed, many computer RPGO's companies fail to capitalize on this, but Todd has really caught on here, allowing you not only to customize the appearance of your characters, but also to name your own weapons and spells. The level of detail is tremendous - you can even change the stats of arms on your fighters, shields! Check out the full review on page 52.

Todd Potts, designer and programmer of Knights of Legend in his Origin programmer's den.

[illegible]

1. The first step is to identify the problem. In this case, the problem is that the company is not meeting its sales targets.

1. The first step is to identify the problem or question that needs to be addressed. This involves understanding the context and the specific requirements of the task.

There is little that has been played in the world. It can be said that Northern countries specifically do not see higher than differentiating it from other one the others elsewhere in the world. Most countries include whether or not the subject is current, social, strategic, how many hit points it has, and so on.

A part of the answer (that of "liberals") consisting in total or some degree of economic control over the world economy, including the use of international trade controls, is the world.

THE ULTIMATE ULTIMA

There's no doubt about it—Ultima IV has to be one of THE games of 1990, if not *Game of the Year* itself. Ultima IV wasn't exactly lackluster, but *Ultima* takes the fantasy game into a whole new dimension.

First, it's extremely easy to play. One of the problems with early RPGs (including *Ultima*) was the learning curve: the player had to ensure before he could really settle into the game. Menus had to be mastered, commands remembered, keystrokes noted. In *Ultima IV*, everything is mouse-driven, but without in any way limiting the options open to the player.

Movement in the game is mouse-controlled—a small arrow on screen shows the current direction of travel and you simply move it in the direction you want to go and click. Quite apart from the enormously increased graphical presentation, there are other major refinements including having all your characters visible at the time, rather than a single "party symbol," four characters follow each other about intelligently as you move from one place to another at between obstacles.

Mouse control has also been extended to object manipulation, so you can now pick up an object and by clicking on it. Clicking on character names also gets you character attributes and status. There are also graphic screens for your inventory, rather than the old lists, and for the clothes you are wearing, as well.

All the combat routines have been dramatically improved—which is saying something since *Ultima IV* had one of the best combat routines of any RPG in date already. In addition to the usual individual control of each character, you can now issue more complex tactical orders that include commands to flank the enemy, retreat, go berserk, assault the nearest opponent, change position, and so on. Going berserk, by the way, involves singling out the most dangerous opponent and heading for that target, attempting to kill everyone else stands in your way.

SILICON UNIVERSE

The statistics of *Ultima IV* are pretty awesome. There are 2000 types of objects, and 16000 objects in the game itself. There are 2000 different graphic tiles. Every single object has its own attributes, every one of the 224 characters in the game has its own personal

From your own PC, you can choose to play your characters themselves or let the AI do it.

"In fact, there have come to help this sickling, the many eyes, the darkness, as if an angel had!"
"Oh, before we go, and I shall give the light of the sun into the darkness of this darkness."

Character statistics (strength is also, for set of several dimensions in *Ultima IV*—it has more than 1000 different items, simply juggling numbers alone.

The bright graphic design team responsible for many of the most beautiful in *Ultima IV*. From left to right: Keith Marshall, David Huxford, Michael Blackwood, and Edgar Johnson.

history and dialogue, and the game only just squanders into some drab—there's after heavy compression. The map itself is composed of 3048576 tiles—and that's only the upper level in addition there are another two underlying dungeon levels.

On the magic side, there are 100 spells—and unlike most computer RPGs these are genuine, unique spells rather than a whole load of "dummy monster" routines. Other nice touches include using invisible characters in fast battles, and spell mixing is automatic.

Ultima IV will also be pleased to hear that invisible doors are now rather harder to spot. Mapping is more of a challenge too, since the large scale overhead view is no longer used; you are at close range for you need to be in town only at the time.

And the story line... One of *Ultima*'s strengths has always been the plots (Richard Garriott comes up with and *Ultima* is no exception. This time after a superb opening sequence you're summoned back to Britannia, to find that the world is under attack by an evil race of gargoyle. The best in the tale, however, is that all is not as it seems.

"*Ultima IV*" says Richard, "was inspired by so many elements of our society. Take Jim Bakker, for example, the TV evangelist recently depicted after revelations about his private life. The world is full of people pretending to be one thing but in fact they're hiding something quite different. That's what *Ultima IV*, The False Prophet is all about."

And *Ultima IV*—all spells are now in English, but there are differences in the way you use the old-style command language if they wish.

AND YET MORE IMPROVEMENTS!

Check out these other features of *Ultima IV*:

- Weapons, armor, objects etc. are total—they flow in particular directions and at particular rates.
- You can check out the battle statistics of opposing monsters during combat.
- There's a help command for dialogue that highlights keywords in a character's speech for further interrogation (you can turn this facility off if you wish).
- You get your own room in Lord Britain's castle.
- Miscellaneous object descriptions: you can put items inside other items etc.
- The whole world is in constant scale and perspective.

From the opening sequence there's a whole episode and you're about to be transported back to Britannia...

ACE

Historical gold blocks and silver medals throughout ACE's reception. EA has won over 200 awards in the last seven years.

When in Rome...

ACE infiltrates the techno-castle of Electronic Arts outside San Francisco and discovers a company moving from CD-I to Ancient Rome...

EA are making big progress — by going back in time. Two years ago, they were at the forefront of CD-I research and development, headed up by CD genius Greg Baker. Today, they've closed down their CD-I division. Baker has left to work for Microsoft's CD division, and EA are producing a string of excellent, but conventional titles. What's going on? Is this a retreat from new technology? Or simply a different approach?

The company was the first into the CD-I development race, and the first out of it. 'We've really scaled down the whole thing,' says Senior Vice President Tim Mott. 'Four years back, when we saw the audio CD, we were really excited. We were involved with Sony and Philips in the CD-I specification, and very hopeful. But after a year we wound it down.'

The problem lay with the content delays in actually producing a user base for the new technology. Philips and Sony have consistently postponed the launch date for CD-I, originally planned for two years ago but now not expected until Spring 1991. It's just too long to wait. But EA aren't retreating behind the apparent inaction. As a company who, while maintaining a strong base of conventional products, are still one of the most informed about optical game storage and its possibilities.

CONSOLES FIRST

'Did you know?' asks Tim. 'That over half the world's installed base of CD-ROM units is for the NEC PC Engine? It's not the high-tech CD technology that's going to really put CD-ROM and eventually CD-I on the map, it's the console market. Games machines are going to lead the way into optical technology — you'll soon be able to get a complete CD-I compatible system for around \$300.'

EA's view is that the heavyweight CD units — the Headstart 31999 PC CD-ROM machine, for example — have little future, at least as far as the games market is concerned. 'Big business is really only interested in rentable media,' insists Tim, 'and whilst many machines like the Headstart simply aren't targeted properly, but read-only technology is ideal for games.' The real advances in CD-ROM programming, then, are going to be made on the games front, and that means at low prices. Low prices require high volumes, and only the console market can deliver those high sales. UK computer firms may soon have cause to feel very thankful to the likes of NEC and Sega, whose consoles may well be the most important hardware base for early CD-ROM research.

Despite their backtracking on CD-I, EA are obviously casting sideways glances at the console market, however. As Street Team points out, 'A genuine cause of concern is the cost of entering into the video game business...'. Companies wanting to publish on Nintendo and NEC have to put forward considerable sums of money to test their titles (controlled by other distributors, but with no in-house expertise to be gained from producing CD-I titles under the console umbrella, it seems unlikely that EA will suit on the sidelines for very long).

CD-I would also suit some of EA's specialties. Tim, particularly particularly interested in RPG technology, says Tim. 'The idea of creating an environment and a character is very powerful. I think we'll soon be seeing the combination of RPG and simulation technologies — and the realism that comes from video processing and the storage capacity of CD-ROM is going to make products much more viable. We'll definitely be shipping our first volume CD-ROM product within five years.'

ROB'S DEN

Rob Hubbard, once the toast of UK open markets of game sound tracks, is now to be found deep inside the EA mansion, not only in a soundproof room with no windows and hundreds of thousands of pounds worth of equipment, but the music, you'll be pleased to hear, sounds better than ever.

"We're getting MIDI and writing it with him," gushes Rob. "Even the sound effects get the full star treatment. The main menu on Indiana Jones 500, for example, are all based on complex forms for that determining the pitch of the engine."

Rob: "This game isn't done like music - it's more in the play. Incredible with big action and it's a screaming Rob Hubbard sound track."

Rob Hubbard in his den where games like Indiana and his thousands of recordings. With all that tech, it's no wonder he's a star.

for a different speed - and it's different for every type of engine."

The biggest difference between the US and the UK, for Rob, has been the changing musical tastes across the Atlantic. "I've watched an awful lot of R&B and CBG cut here," he admits, "and it's taken me a long time to get used to writing in the American style."

Rob's attention to detail in his music is quite extraordinary for a computer musician. That, coupled with a tremendous flare for composition, makes the tracks he puts out something very special. In *Die or Die*, for example, there's a scorching guitar solo which, when played over an MT32, sounds only below its status in the game all by itself.

"We got a guitarist in with a King MIDI guitar. After he'd done the solo, the industry had output his channels, and it took two days to add it down to me. It's especially designed for a young audience; a rock-style tune with a few little hooks in it. After listening to it, we began working for the UK."

"We're getting MIDI and writing it with him... here..."

Rob Hubbard, as producer British computer music games, now he's a star.

Rob Hubbard, as producer British computer music games, now he's a star.

on a keyboard, then processed using a Fourier's sequences. Rob's constructed several music abilities that enable him to manage MIDI data into such a form that it is acceptable to the programmer's game code. He also provides drivers for the many different sound formats (ADLS, MT32 etc.) supported by the EA games. MIDI code and drivers are handed to the programmer who can then call them up at any time during the game.

Looking ahead to the future of game soundtracks, Rob sees a time when well-known artists will contribute special tracks - just as composers like Jarry and Vangelis currently produce film soundtracks. If there's any justice in the world, by the time Eric Clapton and David Bowie are knocking out game tracks, Rob Hubbard should be just at hand.

Stewart Bunn, leading up development in EA. He's most important still there in the management of modern games projects. The days of the programmer-developer are over.

The giant Surely not. After all, other companies, like you can see elsewhere in this issue are already shipping CD-ROM titles - but you can see EA's point. Almost all current CD titles are simply enhancements of existing ROM-based games. EA's *Indiana Jones* (based on the FM team, for example, is not a lot different from *Die or Die* with the exception of an enhanced sound track).

The fact is that almost anyone can produce a CD-ROM version of their game, but EA are one of the few companies who, because of their previous work in the area, know what's involved in creating a full-scale title that makes proper and complete use of CD-ROM's added features.

"We have a very strong technical base here," explains Vice President Stewart Bunn, "and the good news is that that enables us to push existing hardware to the limits. But the bad news is that it also means we know what we can and can't do. And with respect to CD-ROM it's especially what we can't do."

This means, essentially, taking things slowly. "It's fun to think about game leaps in technology," agrees Stewart, "but in reality the market is not going to move that way. It's more in a lot of small steps. The cost of producing a fully-fledged CD-ROM product is measured in millions of dollars, not tens of thousands, and until the market coasts up you're going to see incremental improvements rather than huge advances."

Meanwhile, with games like *Indiana Jones 500*, *Conan*, and *LHR* on the way, what's complaining if EA don't give us CD-ROM products until we've got something to play them on? Seems like good old-fashioned common sense to us.

The Bunn: "The little mistakes are far better for games than the big ones. The games are in very sophisticated machines."

ET TU, BRUTE!

Delors (Fidel of Marstonville, Ill., right), is reported by the Weekly World News to have seduced her daughter from a crime by playing an Elvis record.

This is only one of a series of reported incidents in which Elvis fans claim to have seduced good looks, health, and marriage by playing to their patron saint, the King.

Establishing naval bases.

The ruler's move is indicated. Note the language ruler moves on the map, which enables you to pinpoint your position on the screen.

Kelly Black, designer of *Defender of the Crown*, sat back and looked at the game and saw that it was good.

But it could have been a beauty (at better if it had a good move system) as a useful move game. So he sat down and started on *Conquest*. Still under development, it already looks as if Kelly's (co-)created *Knight and EA* are on to a winner.

Conquest is a multi-level strategy scenario with some very attractive battle sequences. Your role is as an officer in the Roman army and your objective is to spread the imperial influence as far across Europe as possible. Objectives include recruiting Caesars (yes, there's another production state somewhere in town), keeping the natives happy, and, of course, waging successful military campaigns.

Central to the game is the *Defender of the Crown* style map display, showing the various territories available for conquest. Unlike *DCC*, however, there's far more to do when you enter into a campaign. Political,

EEI will buy you a 10-day course of the Primary for the weight loss. According to the manufacturer...

...Channing June 17th patients who put on less (10) plus rapidly lost huge amount of weight. Doctors doubted what they called a "fat compressor" effect on users." Call 1-800-444-6881 (within the US, toll-free) and ask for Marla.

Several times over 250,000 people a month of training in performance, with high scores in things being produced (like computer programs). But that's not all. We've also seen some more on (2). We can mention some (3) (4) (5) (6) (7) (8) (9) (10) (11) (12) (13) (14) (15) (16) (17) (18) (19) (20) (21) (22) (23) (24) (25) (26) (27) (28) (29) (30) (31) (32) (33) (34) (35) (36) (37) (38) (39) THEME PARK MYSTERY

WELCOME TO THE PLEASURE DOME!

What sinister power has forced the Magic Carpet Theme Park to close down? Why does the very mention of its name send shudders down your spine? What terrible secret drives its former owner mad?

You're the inheritor of this mysterious pleasure dome - only you can find the answers. Step through the crawling terrors, board the mystery train and experience a fantastic journey through four entirely different zones:

Dream Land, Dragon Land, Feline Land and Yesterday Land.

With outstanding visual effects, sinister sound and an inherent plot, this is one mystery you'll never forget. Solving it is an achievement, solving it is the most challenging part of all.

Once you've stepped through the gates, there's no going back.

BUT DON'T GO WITH US, WE'VE GOT YOU!

Out of the Dungeon

High on the Mira Mesa, just outside San Diego, California, lurks a small company with some big, big games: FTL, creators of *Dungeon Master*, *Chaos Strikes Back*, and *Oids*...

It all started with spellcheckers. Not just one, or two, but twenty of the biggers, in eleven different languages. "What if," says FTL's Russ Rossini, "...when you're written one spellchecker, where do you go from there?" More spellcheckers, that's what. CD, pen, and *Dungeon Master*, *Oids*, *Chaos Strikes Back*, CD-ROM games, and beyond...

Right now, FTL is scratching their heads wondering where to go after *Chaos*, which is itself well on its way beyond *Dungeon Master*. "Perhaps it should be easier," wonders founder Wayne Hodde. "We've toyed with the idea of doing a beginner's version of the game - a sort of *Dungeon Master Junior*. We've also considered producing a Super Expert continuation."

Whatever happens, it has to be something that goes way beyond *Chaos Strikes Back*. "What's important," says Ross, "...is that a company with a winning formula should still realize that it has room for improvement." *Chaos* was certainly an improvement, but *MSD* took the thing a greater challenge still. Its Wayne points out, "I've thought we used some of the original *Dungeon Master* code for *Chaos*, so we were really pushing the limits. In putting together new projects, it's not the coding that causes the problems, it's getting everything to work together."

FTL's basic objective is to give the player total control not only over the games he plays but also over the stories that spring from those games. "We've always focused a point where the story is scripted entirely by the player," says Wayne. "We take you to the starting point, and from there on it's up to you. It's composed a lot of players because when they confer with each other they discover that they've reached entirely different situations."

"One of the problems with the *Dungeon Master* system and its later development (e.g., in *Chaos*) is that tools you find in many people are really getting into the game but it's almost impossible to keep putting in little scenarios for them all to discover. But we keep trying..."

CD DUNGEONS

The storage capacity of CD-ROM could provide some part of the answer - and also new problems. "With storage like that," warns Ross, "you can be positively flummoxed in your use of space - and that can be really dangerous in game development." Nevertheless, FTL are already producing games using CD-ROM technology. Like many US companies, they've agreed to produce titles for the FM Towns, "...because it gave us an opportunity both to get into the Japanese market and, at the same time, give us more experience in writing for CD-ROM technology," explains Ross.

The Towns version of *Dungeon Master* is pretty similar to all the others, with one big exception: the music. Once that CD starts spinning, the atmosphere of the game is hugely enhanced by CD-quality stereo sound.

"When I first looked at the FM Towns," Ross recalls, "I kept looking at the specifications and feeling it was all so stupified: the machine seems to do absolutely everything: video editing and control, music/audio, CD player, computer graphics - they've tried to provide a link to every bit of hardware we normally use in the home. The town's monitor even has a TV tuner, so you can type your school essay on the screen, right over *Benny Hill*. I would like to think that ultimately all the entertainment technologies will merge into one. And when they do, FTL will be ready."

In the meantime, FTL have yet to decide on a full leap to *Dungeon Master* and *Chaos Strikes Back*. In the near future, you'll see conversions of existing FTL games (*DM*, *Chaos*, and *Oids* in particular) on the Mac, PC, FM Towns, Sharp X68000, and others. Until all that's done, fans have been given the chance to share the *DM* experience, and have to wait for *MSD*. "We're going to stick to the first person adventure. Like *Dungeon Master*, it'll mean you're there, you're in control. Stand by your joystick..."

MAC-N-OIDS

You're looking at the man who gave the world a fast taste of *Oids*. CD was not San. Hodde's brought together the wrong pieces of all his favourite games, mixing them together in *Adventure*, to combine that unique *Oids* playability with an original scenario by Wayne Hodde. "And apart from that little twist, I guess, I stole most of my life away playing *Adventure*" he confesses.

Right now, Hodde's working on a Mac version of *Oids* that looks set to be the best conversion yet. He's attempted to use as many of the Mac's familiar user interface tools as possible - especially in the Data construction utility.

The new game shows an influence from... FTL's *Adventure* and *Chaos*. *Dungeon Master*, *Chaos*.

DUNGEON MASTER FROM BIRTH TO FM TOWNS...

Dungeon Master on the Atari 2600 — there's certainly no *Apocalypse* version running being developed for the FM Towns.

Up on the Atari 2600, we took a time capsule right back to the beginning of the *Dungeon Master* development. Here's how one of today's most popular games evolved — from the very beginning to its recent conversion to the PC and FM Towns.

It all started with Wayne Holder's desire to produce a game in which players could experience, as nearly as possible, an individual journey. "I wanted people to have a lot of fun, but to feel when they'd finished a game — and I wanted those fun to be unique."

All the puzzles in the game are worked out individually. Early design is very loose (see pg. 16) and carried out on paper. Later on development was transferred to Macs. "We know," said Wayne, "that there was absolutely no chance of our getting our money back with just one version of *Dungeon Master*. We had to set up a system that would serve as a foundation for later games."

Part of this system involved the development of a *Dungeon Master* construction utility for the PC. Using this utility, a game designer can almost instantly create a DM dungeon complete with all wall, floor, and ceiling features, monsters, and traps.

The actual scenario was developed through group discussions within the company and Wayne's wife (who is a professional writer) later sat together the dialogue for the game. But in reality, says, FTI concentrated on keeping the story as loose as possible. "We are working towards a point where the story is scripted entirely by the player," says Wayne. "We take you to the starting point, but from there on it's up to you."

One effect of this has been to confuse a lot of people in the States who communicate about the program using bulletin boards. In America you can dial up a local

"I seriously doubt whether the FM Towns will still be a competitive machine by the time they're ready to release it in the UK — there are many other CD-based computers preparing to make their debut."

Russ Marshall

The *Dungeon Master* creation utility. Using this, you can build together a sort of virtual fortress in a few minutes. The program is menu-driven (shown) and very fast, providing the programmer with comprehensive statistics and allowing him to be placed anywhere on the map, almost instantly using the mouse (shown on a grid).

bulletin board and download DM characters, bits, and even play-by-email designs for *Chaos* (shown on pg. 16). But the random nature of the *Dungeon Master* system has caused a few hiccups. People leave a message saying they're stuck in such and such a place, and are hoping a certain experience, and others die in and say there's no such thing.

PC DM

After the success of *Chaos* (shown on pg. 16), currently marking its conversion of the original *Dungeon Master* for the PC and Macintosh. The PC version posed a few problems. "We started off with a mouse display, but soon found that the game really demands colour. Our perception of things on the floor, for example, was seriously degraded using a mouse screen. The VGA version will now appear in April/May of this year."

● Robert Browner of Longmont, Colorado is mounting a legal claim to ownership of the entire Northern USA — on the grounds that the territory was granted to his family by King Charles I, if successful, he intends to grant citizenship only to those people with blue and green eyes. Such people are, he claims, genetically superior to other humans.

● According to the Boston Herald, Paul Newman's contributions to charity over the last seven years have totalled at least \$22 million, mostly earned from commercials.

Looking down the stone steps from the main ranch house (top), there is the back building (see job overleaf) in the distance on the right.

Just north of San Francisco lies Marin County (pronounced Mar-ree), with the accent on the second syllable, slightly. With the city, perfumed streets of LA and "Coun", Marin is a paradise of rolling hills and green grass, with narrow country lanes leading good small ranches that house some of the best horse-breeding facilities on the West Coast – and some of the richest, most powerful Americans you're likely to meet.

Life here is laidback and luxurious. During the day, businessmen rush off down the driveway to spend the working hours in San Francisco; come the evening, they slip into their "bat tubs" (heated jacuzzis) and let the pronounced jets bubble the water around them, easing away the tensions of the office, while they make a mental note to call their stockbrokers first thing in the morning.

Skywalker Ranch

Into this refined locality strayed George Lucas. He bought up 5000 acres of real estate, put a fence around it and an electronic gate at the end of the drive, created his own security force (two of whom are on permanent duty at a guard station just inside the gate) and a fire brigade (in fact, and – in the middle of this style setting – brought a fire to life. Literally.

Skywalker Ranch in fantasy came true. In the beginning was a script, detailing the life history of a fictitious Marin family. According to the story, this family settled upon the land purchased by Lucas and built a beautiful colonial mansion. In 1990 the mansion still

'There will be major cinematic releases based on computer files within two years.'

A.J. Padavan, in charge of game development at Lucasfilm

Once upon a time, George Lucas, the man behind *Star Wars* and a string of other movie blockbusters, checked his bank account and noted that it was struggling under the burden of an enormous credit balance. He therefore decided to lighten its load – and at the same time create a paradise on earth, a paradise in which numerous creative people would be protected from the rigours of the outside world. There they would be encouraged by higher-than-average salaries to pursue excellence in the arts of computer game design, film production, and other worthy pastimes. ACE entered this Maric Mansion of creativity: and here's what we found...

INTERACTIVE MOVIES ON CD

Lucasfilm are another company heading into CD-ROM. When the system finally arrives, they'll have some very strong advantages over other companies. One of the big advantages with CD development is generating all the data to feed those zippy little floppy disks. No problem here for Lucasfilm. They have access to all the property rights and creativity of the Lucasfilm empire, not to mention the thousands of feet of film from the cutting room floors and extensive sound libraries.

"The real problem with CD-ROM," says Brian Padden, is the limited user base. To do justice to the budgets concerned, the user base is going to have to be very, very big. The money involved in any sort of film footage is enormous. To give you an example, a single special effects shot from *Star Wars* (production lights and things), the art director of the Lucas organisation could cost as much as one million dollars!

Brian naturally has the same asking feelings about finances. "What about the little printers that cost? The pens, how on earth do you fit a CD with equivalent of 3000 PC disks? It is insane as a price to fit in!"

Officially apart, Lucasfilm are doing the best of US publishers who are discussing *Star Wars* products to release their CD titles. Lucas is currently being courted for the *Tales* along with Indiana Jones – The Graphic Adventures and *Indiana Jones*. It's unlikely that any of these games will be significantly different on CD-ROM than in their floppy disk originals, but Lucas is bound to do something special on the movie side.

FROM SCREEN TO SILICON

Despite the media connections, Lucasfilm do not, and have never claimed to be in the "computer movie" business. "Lots of companies boast about how they produce computer movies," says John F. Smith, project leader of Lucas' latest Indiana Jones game, but as, but here we're close enough to the real movie world to know just how sophisticated the film industry really is compared to your average computer title."

What Smith and his colleagues do is take movie props and turn them into games. The first computer movie to Italy to happen when they take a game and turn it into a movie—something that development manager A.J. Hebert (known to everyone as "AJ") predicts will happen within the next few years.

Indy is glorious! (SM) never made us the SM. Like many other SM games, this, Lucasfilm are designing more and more for high end machines for more rather than the lower business distribution.

"Our questions always concern what we can do in the game that couldn't happen in the movie," says Smith. "We have to build on our own strength—interactivity—and at the same time do justice to the cinema original. We're lucky that we have direct access to George Lucas and Steven Spielberg and both of them have been very helpful in the past. This was especially true at Indy, where George was very supportive about plot development and both of them suggested that we incorporate it in the game. Our ultimate objective is to allow the player to script the movie himself, by finding his own natural alternatives within the plot."

When Smith wants to think, he heads off for the studio's basement and, surrounded and surrounded under the bridge, he looks down, he looks and knows bring their center like Smith here.

stands, historically correct in every finest detail, but actually constructed about six years ago.

Into this incredible historical environment every window is composed of hand-finished panes and mosaics, every painting a contemporary original; the 20th century subtly shows its technological head. In the recesses of the mansion there is a small 30-seat cinema, with wide leather seats and a ceiling constructed entirely out of polished oak casks. There are offices, housing beautiful working innovations, fax machines, computers. There's a dining room where Lucasfilm employees gather at midday (all food prepared by the in-house cordon bleu staff) and outside there are yet more buildings, all in period style, housing different departments of the Lucas empire.

Our destination was the stable building, home of the Lucasfilm programming team...

MEET MOREARTY

First on the schedule was a visit to the office of one of the company's lesser secrets: Brian Moriarty, the ex-

"The CD-I specifications look great, but where are the machines? If they'd come out four years ago, they'd have been hot, but now they're behind the times."

—Ken Calvert, 3000MHz programmer

Smith has a complete description of this also shows he has been himself in the field of business, but which the game goes for name.

film and creative genius who brought you WhiteBriar, Hardy, and Beyond Jinx. Right now, he's putting the finishing touches in the long-awaited Loom.

Brian joined Lucasfilm because, he says, "I saw they had a lot of potential. They don't rely entirely on games and they've got lots of multimedia resources." Brian brings to the company a touch of the true computer writer. He's been involved in games from the year 2000 and manages to combine technical excellence with other, more aesthetic considerations.

"Music is my first love," says Brian, and Loom was actually inspired by Swan Lake, which also contributed

to the game. Brian, in his opinion, was working with Lucasfilm, looking for a musical fantasy in the game.

HIS FINEST HOUR

Larry Halliday is the man behind *The Final Hour*, play by play's first (and only) computer responsibility for Dallas teams. Since then, he's been at Fox Sports, the game design team (beginning in 1983 when he converted arcade games [including Super Soccer] to home video), he works in C and assembler, using the latter for graphics routines. "All the math calculations for the 3D worlds are done in assembler; those are the routines you really give your brain to get them as quick as possible. The graphics mean the math, of course, but it's a hell of a trial."

Apex's assistant designers gained in the process. A bunch of 3D graphics and mathematics got off while developing the Battle of Britain scenario for the T-1000. It was only after several months, he says, and he learned himself in the feature of the T-1000 that he realized through at least 3D books on the subject, of which his favorite was probably *Final and Lost* by David Galloway, the German one.

Larry's long term aim is to take the techniques developed in *Final* and produce a multi-player game. "I'd like to start with a direct non-modern line between two PCs to work my way into the modern side," just then, he challenges "...a regular human" at the other end of every game. The biggest difficulty is always the artificial intelligence side. I don't just want the player to have good opponents. I want him to have a variety of opponents also. I want human opponents to participate. I think that every game is always a closed system, whereas in a situation you're not just 3D space and everything inside moves apart."

He built the musical score for the game. In fact, I think it's generally very underrated in games and is destined to become much more important. That's one of the things about 3D development - the main thing about it is that it gives you great sound." Since *Loom* is currently being converted for the IBM Town, this is a clear pointer towards the thoughts of the series.

As for *Loom* itself, Brian has clearly had his time out producing the game, which has been delayed several times during development. "I stayed just out

SCUMM

Don Adams is the man who programmed the game that inspired the series, *The Final Hour*.

many interpreted BASICs. According to Roy, "the information results in an execution speed as fast as assembler. It's also extremely compact. It only takes 3 bytes to add a character from one side of the screen to another."

"The SCUMM language also gives you high-level abilities to manipulate objects and characters. To do all this, the SCUMM module as a whole actually comprises of an interpreter, a compiler, an animation package, and various utilities. In all, there are many programs in the suite, but it's very easy to use. If you can program in BASIC, you can program in SCUMM."

different, *Loom* is different. It's by far the hardest game I've ever done. I believe it raises the stakes for everyone."

"One of my goals in the game was to avoid the bottom style of observation and little people which are really hobbyist (but no one does call them that). The problem is that those stereotypes are useful if you want to avoid having to provide lots of background detail. All these gnomes, elves, and 'hulings' are useful concepts."

The lack of stereotypes in the game is made up for by including a 30 minute audio drama cassette which tells the background story of *Loom* in glorious audio technology. "It was produced here by the Lucasfilm technical staff," says Brian proudly. "This is NOT a video link product!"

You can meet other members of the team elsewhere in these pages. One thing's for certain: no one ever found a more beautiful place to work.

RETURN TO PRACTICE?

Lucasfilm were one of the first companies to put out a fractal-based game - *Return to Zaxxon* involved flying over a fractal-based landscape that generated various flying formations using complex algorithms. More than an art work, this other fractal emphasis in operation. Because they were involved during various structural and design work, which allowed them to go back into the game.

Lucasfilm were also working on a new fractal game, which could possibly be in at least three types of fractal landscape (flying over, driving along, and going into) in a single game. Fractal games are likely to be used and will change the company's way of thinking about the title of *Return to Zaxxon* but not of the operation.

PHOTOGRAPHY NOT ALLOWED

You've never seen a picture of Skywalker Ranch, for the simple reason that photography of the main building is not allowed and the rule is strictly maintained for security reasons. You'd be surprised how many people out there think they've descended from Darth Vader and should destroy all Lucasfilm employees on sight. Check out these exclusive ACE security-conscious pics...

Thanks to Betty, here the last getting down photo.

Behind the window, some of the Skywalker Ranch grounds are growing green.

The 'back building' (which impresses me) I don't think is just one of the most beautiful in America. It's a great example of good production design, the 'new' studio project.

During an office visit, we saw the Skywalker Ranch. This photo shows the last one seen of the Skywalker Ranch, which is the most beautiful place to work.

One of the most beautiful places ever built, it's a great example of good production design, the 'new' studio project.

Cinemasoft are perhaps the only company who are seriously attempting to produce 'computer movies'. Their latest game, *Defender of the Crown*, is a CD-ROM version (see elsewhere in this article) and the company have also done pioneering work with interactive video tape technology (see Video-master box).

"Our aim," says development manager Dave Rounton, "is to open up a whole new market of interactive entertainment. We already have three CD-i titles under development for release in 1995, when the machines appear. We've converted *Market Manager* for release on CD on the IBM PCs, and will support CD-i if it ever makes sense from an entertainment standpoint."

Dave Rounton thinks along much the same lines as Brian Moriarty at Lucasfilm when it comes to the implications of CD-i for games. Anything goes with CD-i - anything that we've seen on film or TV - and obviously the more full motion video capability we have the better. But in fact it's the audio that's the key. Take someone talking, for example, the information in their voice is nothing - but you can say 'I hate you' in so many different ways and even make it sound like 'I love you'. Or, to take another example, imagine watching a scary movie without music. The music tells you so much about what's going on without it, it's just not scary at all - and when it comes to our games I want people to really back off from the screen!

Dave has had a long involvement with the entertainment industry. He started with a laser disk project at IBM and co-designed *Goldblaster*. "...But it was such a programmer's medium in those days that as a director I got totally frustrated. I went to Atari and worked on computers for a while, but then I saw *Defender of the Crown*. It had all the movie attributes and approaches that I had been trying to get George Lucas interested in back in 1983."

BEAN EATING BUDDY BLOWN AWAY!

Mexican Eduardo Valdez is reported to have shot his best friend - for eating. Valdez claimed 23-year old Hector Martinez had eaten two quarts of spicy beans. "He drank up the whole apartment,"

Valdez said, "and still kept eating beans." US newspapers reported the story under the headline: 'Come with the wind...'

Defending the Crown

THE CREATIVE PROCESS

Producing games like *Defender of the Crown* and *It Came From the Desert* involves Dave in very similar work to producing real movies. "We work like a regular production company here," he says. "We have a core group of people and when a new project comes along we merge the teams, then it splits back down again afterwards."

One thing that's really changing is the money involved. The days of the \$1 million dollar game are rapidly approaching. Take sound tracks for example - we used to think in terms of \$1500 to \$2000 for a track, now we have to pay at least \$10000."

Producing a game for the Amiga, for example, makes first storyboarding the project, then writing out the internal logic and structure of the game design using Cinemasoft's development utility (*Storyboard* toolbox). "We're most interested in forming a good team for a game," says D1, "around seven or eight people. The role of the individual is not as great as it used to be. One of the advantages is that when you're on your own you don't design beyond your own technical abilities, but in a team you're always being pushed: programmers are challenged by designers, designers by producers, and so on."

Once the game design has been laid out in *Storyboard*, the screenwriter writes the descriptive text and speech for the game. Even at this stage the design, although in a form ultimately usable by the core program code, is still machine independent. On CD-i, for example, you have speech facility," says Todd, "and in *Storyboard* text can be speech or simply text depending on the hardware platform the game will be produced on."

During the coding stage, one of the most important tools Cinemasoft have developed is called *BOLT*. *BOLT* allows us to define data consistently from one machine to another - it identifies sound, music, and text in a way that is machine independent. So, for example, a picture in 256 colour mode on a VGA 800 will display perfectly in 32 colours on an Amiga. The problem, the timing, the animation remain essentially the same. We do

Cinemasoft's *Defender of the Crown* was one of the first programs to convincingly demonstrate the powers of 16-bit technology. At their offices in Los Angeles, they're now pushing the boundaries of entertainment technology even further.

Cinemasoft's offices are only a short drive from Hollywood.

GETTING IT TAPED

Cinemaware won an award for their interactive tape game, based on Walt Disney's characters and already reported on in ACE. At their offices, we were able to get a closer look at the system and the results the company achieved.

The biggest challenge was to put together a whole interactive movie based on existing footage. All this had to be cut together to produce the final version, which consists of a single video track and two audio tracks. And the audio was even more tricky...

"The first thing," remembers Dave, "was simply that all the people who did the previous generation of Disney voices were dead. There's a whole second generation of voice-over actors doing the work. We had to re-record every single sequence - just doing Louie's voice took us over ten days.

The result is a series of sequences, each of which sets up a situation (e.g. Donald getting a fat tyre into the player - the games are targeted at young children - has to resolve by solving a puzzle. The computer graphics puzzles are overlaid against the cartoon background and the user has control to manipulate the cartoon objects, shoot at ghosts, or whatever.

"The trouble with the Video master system," explains Dave Floridan, "was that it was sold as a big 16 bit tool on the shelves amongst the video cars and the dolls." In the end, however, the project helped Cinemaware further refine its skills at combining movies and computers - now being tested to the full in the development of the CD ROM version of *It Came From the Desert*.

All the footage in the Cinemaware interactive video tape game was cut into film, including timing, camera, state or action to produce an entirely new atmosphere.

Building a new sound track for Louie's voice took five days.

The 16 bit system gives the player a screen to manipulate the computer graphics and interact with the game. Here you're trying to encourage people to look at the situation on the right as you (Donald) look on the road ahead.

More than the man who designed Louie for the Dream, Dave now oversees the editing of some of the industry's most powerful programming tools for output or game.

sometimes do separate artwork, but the data description doesn't change."

COOKING FOR SPEED

It's obvious that Cinemaware have made an enormous investment in programming tools - probably more than any other software house we've visited. This not only speeds up development, leaving more time to refine the game designs, but the programs themselves have become more compact and faster in execution as a result.

BOLT, for example, ties all the data for a game together into a single file structure, compressing the data. As a result, loading times are enormously reduced - one section of code in *Loops of the Ring* (a game) took seven minutes to load into the Amiga in the original version. After being BOLT'ed it took six seconds. This development is even more important when you remember how much data there is in a typical Cinemaware product that relies so heavily on fine colour graphics and sampled sound.

Finally, like many other American companies, Cinemaware use target much of their development at the new 256-colour VGA PC systems rather than the Amiga. They use several

different animation tools, and when the project is completed the graphics are ported over from the PC onto the Amiga, rather than the other way round, as used to happen. Consider this timing for the best result on the best systems with the starting experimental work you can see elsewhere on these pages, and you can see why Cinemaware are - despite occasional criticisms about the plausibility factor - still very much at the forefront of games technology. If we ever get a real computer movie, this is where it's going to come from.

"I've always wanted to produce a game with really RMG bugs!"

Dave Floridan
(see *It Came From the Desert*)

David Floridan, creative director of a new generation of computer movies. Here the challenge isn't who can do the best, but who can do the best in a new interactive tape system that was never released - despite achieving a success in its own right. (See *It Came From the Desert* for more games from ACE's latest issue.)

LIVE ANTS

Entertainment are taking a giant leap with the CD-ROM version of *It Came From the Desert*—they're actually including live actors in the game.

Scenes involving live action are shot against a green background that allows the action to be "chromatized" into the final image against a computer-generated landscape. The production involves 29 actors, recruited in the traditional way using casting agencies—not difficult when your office is close to Hollywood!

This market ready to appeal to a lot of people who have never picked up a computer—teenage girls and women, for example. These people don't want to shoot bugs—that's boys' stuff," says Davis. "We're opening up whole new games with ICFTD. Not only that, but in future we have the possibility of using big name actors."

The celebrities are curious, it seems, and have shown a lot of interest in this new game form.

"They saw what happened with *VOR*," says Davis, "and how they made more money from the video releases than they did from the original movies. Now they're rushing out already to see what happens with computer games. We may get big names very soon for games; there are some particularly interesting possibilities for sports games which we're looking into."

The finished product is a live action in a computerized digital movie. It's dependent on the change around 2000 a day—there's just a timing bit now when the teenage programmer?

▲ The actors rehearsing for ICFTD on location— the green background is replaced by a computer-generated landscape in the final game.

▲ Interestingly, of course, you can run computer-generated images against a live action background—this technique has been used several times before, notably in the old movie *Star Wars*.

"Programmers love the FM Towns—it's got all the bells and whistles..."

—David Huxford

AND DON'T FORGET

you can win an FM Towns in this month's competition!

▲ A new, sophisticated editing system (developed, which will enable designers to treat and guide cinematic elements.

Entertainment's streamlined board game design system. *It Came From the Desert*. The game designer uses the flow of the game using a streamlined approach. *It Came From the Desert* uses the game designer's use of the computer to be defined, separate each individual design, development and design team. In *It Came From the Desert*, the game can be used to design a scenario involving all steps, each completed off the 10-hour video and covering 27 hours. Finally, the *It Came From the Desert* is simply required to be design. To make design changes, you simply enter the *It Came From the Desert* and re-compile it.

...really is a great strategy to increase the better while putting you in control - though the game is easy to play it's also challenging if you're to win because there are something you should watch out for."

TEN STEPS TO WINNING YOURSELF A FUJITSU FM TOWNS

- (1) Buy this issue of ACE that you're reading in the newspaper, round a friends house, etc.
- (2) Carefully unfold the postcard on the front cover of ACE.
- (3) Take a look at the early snaps of five great games featured A-E on the opposite page.
- (4) Do you know the titles of these five games? To help you we've included a snippet from each entry's ACE review.
- (5) All we want from you are the names of the five games.
- (6) Write [IN BLOCK CAPITALS] the game's titles on the back of the ACE postcard. You must use the postcard provided on the front of this issue of ACE - all other entries are void.
- (7) Now write your name, address, telephone and e-mail details on the back of the postcard.
- (8) Stick a first- or second-class stamp on the postcard.
- (9) Send the postcard to ACE - your postcard must reach us before the competition closing date of 9th April, 1993.
- (10) Sit back, Relax.

THE COMPETITION RULES

- Rule Number One: Break any of these rules and your entry is void.
- Entries must be on the postcard provided with this issue of ACE - all other entries are void.
- Multiple entries are allowed.
- The closing date for entries is 9th April, 1993.
- Employees of EMAP, MICROSOFT and FUJITSU are not eligible for entry.
- The Fujitsu FM Towns will be awarded to the first entry - drawn at random - giving the correct names to the five games.
- The winner will be announced in the June 1993 issue of ACE.
- The editors decision is final and no correspondence will be entered into.

The top-down aspects of the mission need to suit your mode of combat just as often. Because you will spend so much time with your ship in combat, you'll want to make sure it's a pleasure to play.

a rotating life display of your ship shows areas of damage brought after a long battle.

OUTIES

are really little critters. While the outland universe is happy moving its own business, all these extra-terrestrial types want to do is spoil the party, and here's why. Because it's a problem — there are too many people, and not enough planets, suitable for supporting life. Because get out there and find new planets to colonize, and if there are no suitable planets, create them. There is, however, a slight complication — before you can create a planet to colonize you require a star for it to orbit.

This requirement might not seem too difficult to arrange — after all, the universe has a countless number of stars, doesn't it? It does, but suppose something previously unknown was to arrive from a far corner of the universe, and suppose that something was to begin trans-

The central display, showing your ship in space, also shows the gravitational lines of force. Here, in this space they are flat, but they become ball in this distant galaxy. Incidentally, the star field will only be seen on a large monitor.

The abstract lines of force are clearly shown by the illuminated renderings of the main display.

forming stars into singularities (that's black holes to you and me) which they require for continued existence? What happened? You end up with a lot of singularities, a lot of happy extra-terrestrials, but no stars, and no more Homo Sapiens. Flat. I'm sure you will agree, a particularly joyful state of affairs.

Unfortunately, this is exactly what has happened in Gravity. The Outies as they have become known are slowly but surely turning the galaxy's stars into black holes. The only way to deal with these horrible ETs is to wipe out their fleet, and turn the singularity in their home system into a sun, while at the same time creating and colonizing newly explored systems. Of course, while you are attempting to do this, the Outies are trying to turn the sun in your home system into a huge great black hole, so you haven't got time to hang about.

Intensely, marked also has a use for black holes. They are means of quick transport between distant parts of the galaxy. By selling a destination and plunging into a singularity, craft can be made to emerge at another singularity in the target system. So while it is imperative to prevent too many singularities from being formed by the Outies, one or two of them do lend strategically about.

To perform your task you have sixteen Uli Scoutcraft. These can be given orders to explore systems, engage in combat with Outie craft, prepare systems for colonization, and then set up the colony. The nice thing about

PREDICTED INTEREST CURVE

You will certainly be impressed by how much there is to do in Gravity. There is a lot of exciting stuff to which you have to become accustomed to all at the outset and the last one of games about things. The only thing about this game is that you believe it is not hard to play significantly because there are so many skills in it. Programming, strategy, which all require equipment that most have no other choice, and the remaining way to do. This game will certainly not like to be playing your machine.

DRAGON'S BREATH

STRATEGY games have always been limited by one vital factor — strategic decisions made within a computer game are always part of a closed system, as opposed to real-life decisions which are subject to an infinite number of unpredictable external influences. The answer is to devise a system which, rather than presenting the player with a set menu of choices, at each stage of the game, allows him to continually alter the parameters that effect play in some way — in other words, experiment.

Palace have managed to do just that in *Dragon's Breath*. The basic idea behind the game is to find the three parts of a talisman that allows entry to the throne room of the Great Castle on Dwarf Mountain at the centre of the land of Aresia Island. The reason that this talisman is so important to you is that within the throne room lies the secret of immortality. Not a bad prize, eh?

There are three characters competing for eternal life: the Ruleress, the Queen, the Sorcerer, and finally the Great Wizard. Each can be controlled by the computer or a human player. This means that you can view a chess game by making the computer control all three.

Initially there are all the sort of options you expect in strategy type games: the ability to read up on recent happenings (mostly battles in the past), and view your accounts, as well as dealing with any traders who happen to call. Most of your duty work, which in this game involves conquering as many towns as you can, is done by your collection of dragons.

Each player begins with one dragon but may breed more. This requires at least three to win the game, since you must use one dragon to guard each piece of talisman as it is found. The dragon's have three main tasks: conquering local towns and villages for taxes, attacking enemy dragons and strongholds, and searching for and guarding the pieces of the talisman. Obviously in the later stages of the game you will want to do all three of these tasks concurrently, so it helps to have as many dragons as possible.

Breeding dragons is achieved by heating eggs from your stock. The hotter an egg is kept, the quicker it will hatch, but slow cooled

Dragons rule OK

in a stunning

strategy game from

PALACE

eggs tend to produce stronger dragons. So if you are desperate for more of the creatures you can produce them swiftly, but at the cost of having a less effective force.

The major part of the game, and the most interesting, is spellcasting. Unlike a lot of other games, mixing spells, you are not simply presented with a list of pre-defined spells to choose from

— that would be too easy. Instead you have to produce them yourself. This is done by mixing a number of elements in different ways to produce the final potion. This means, of course, that you will have to do a lot of experimenting to gradually build up your own recipe book of spells.

The spells can be directed at almost anything in the game from towns to dragons, and obviously they can have either harmful or good effects. The nice thing about *Dragon's Breath* is that it is not essential to master spellcasting in order to enjoy the game. You can begin playing without spells, and then start to use them as soon as you feel confident enough with the basic game.

Dragon's Breath is probably the most accomplished strategy game has seen for some time, and combined as it is with attractive graphics and an atmospheric soundtrack, should please most people who enjoy a more cerebral type of game than the standard fare. The ability to concoct your own magic brews provides endless possibilities and should keep you playing, even after you've managed to achieve the game's objective.

■ Laurence Bradford

An egg on the left. The closer to the center it is, the stronger (and on-ly) it will be, but remember there's also a time to hatch.

During the initial stages of the battle you can choose to do possible locations of the pieces of talisman.

The job — older dragons will grow spells over time, so you can use them for your own.

KNIGHTS OF LEGEND

ACCORDING to programmer Todd Porter, "This is the first fantasy role-playing game to do things in extreme depth." We didn't take his word for it, but several hours of intensive play proved that the certainty wasn't joking.

The game is set in the medieval land of Aethelrea, a very wild place in which adventure is to be found anywhere and everywhere. There are no less than twenty-four quests to be undertaken in the game although if you wish you may ignore any or all of them, and simply enjoy exploring the land.

Before you can begin playing you must generate some characters, choosing from the thirty-one possible classes. Up to six can be in play at any one time, selected from those you have placed on your character disk. It is also possible to save your characters during play by saving the right at an appropriate time. This way you won't lose any gained possessions and experience points when you next play.

Movement is achieved by steering a cursor either around the town or city you are in, or alternatively through the wilderness. When it is necessary to interact with a character you are presented with a dialogue screen and a strip of icons which allow you to engage in conversation, buy and sell supplies and equipment, and so on. Each of the NPC characters has a distinctive personality, and encounters can sometimes be quite humorous (the medieval job shop assistant being a fine example).

Where the detail in Knights of Legend is really apparent is in the combat and spell-casting systems. Because combat is not handled in real time (as in Dungeon Master), but in static rounds, there is time to consider all the strategic elements of each battle, rather than just mindlessly hacking away at things. At the beginning of each round every surviving member of the party is allocated their offensive and defensive tactics for that round.

Once this is done, the whole round is played through and any damage assessed. The beauty of this system is that you only need to reset tactics when you require them to change, if you

ORIGIN/MIND-

SCAPE stuns us

with the most

detailed and excit-

ing computer-

based Role

Playing Game yet

produced

wish to a character to repeat his or her action from the previous round then you simply select OR.

Todd Porter told us that "the key success in the program is Artificial Intelligence," and this really shines in the way that your enemies react. They will, intelligently, repeatedly attack links that have already been damaged, and there are no less than forty different algorithms to decide when and how an enemy retreats.

Similar attention to detail can be seen in the magic system (which is superbly similar to the element construction used in Dungeon Master). It is possible to create your own spells by combining various elements of the linear language - so, as it really is, experimentation can pay off.

When you add details like an art package for redesigning character skins and shapes, the ability to name your own weapons and tools, individual damage status for links, and carefully modelled fatigue, then it is not easy to see that Knights of Legend offers game players a whole lot more than any similar game. Further good news is, that because the system is 100% data driven, it is only limited by the programmer's imagination. The first module for the game will be, believe it or not, a science fiction scenario! Knights of Legend has impressed us, and it will impress you - buy it!

■ Lawrence Kentland

While exploring the main game play is represented with a fantasy view, exploring buildings allows you to interact with items.

You can change your party's skills this way just in time for a new quest, and change their kit.

PC

The game looks very attractive indeed if you have a monitor capable of supporting the VGA graphics. I used it to provide a table to show a reasonable comparison of the game's cost to a minimum (these figures), so you will only need to enter the conversion time. The program supports standard British and metric stores (although neither is strictly necessary if you have neither a them).

AMIGA / 1988 OUT NOW

PREDICTED INTEREST CURVE

Initially the game looks and sounds interesting, but you find you still have trouble finding it to be an unexciting thing. While it is not as impressive as previous titles, there may be some more fun to be had from this game, but I suspect that most people will stop for you off to the comforting land of difficulty at the beginning of the game.

Here's the appearance ahead, as don't change around - altered

Here the racing starts from and you could be thinking for a long time now

5th GEAR

HEWSON's beat-the-clock race game takes us all for a rather bumpy ride

If there are certain games that initially seem disappointing and then grow on you, there are also those that make a good first impression and then fail to deliver the goods. I have found that a cloudy impression that Fifth Gear falls into the latter category.

The game has you taking part in an illegal race in which the only rule is that there are no rules. You must get from the start line to the finish point and back to the line again within a set amount of time. But the route is far from easy. There are obstacles and other cars to be avoided and collision with any of them can cause serious damage or the loss of your car. Fortunately you have five cars to play with, so a little erratic driving is tolerable as long as you don't overdo it.

Initially your car is equipped with a simple steering machine gun, but you can stop off at service points to buy extra weapons and add-ons. These include a missile launcher and missiles, reform tyres to enable you to perform Dukes of Hazard type loops, and a rapid fire option. The weapons, should your imagination be up to it, is for blowing away other vehicles that happen to get in your way, as well as removing tricky static obstacles.

The money you need to pay for such luxuries is awarded for every kill you make and for the time you survive. You already have 10,000 dollars when you start the game which is enough to buy you a couple of goodies, but it is generally best to save some cash to pay for refuelling and repairs. This is especially necessary since the other cars have a nasty habit of firing back, occasionally with pretty good accuracy.

The game utilizes a birds eye view of the course with a status panel beneath this. The graphics are pretty enough and the vertical

The winner stops to the right with weapons and a goodie - providing you have the cash

scrolling is quite smooth. The real problem comes when you begin to attempt manoeuvring the car. It is so sensitive that even players with the lightest touch will find themselves running into walls and obstacles a little too frequently for comfort.

I am all in favour of a challenging game but the difficulty of Fifth Gear is set at such a level as to make learning the game more of a chore than a pleasure. Naturally it becomes much easier when you know what is round each corner, but crashes are still too frequent an occurrence nevertheless. The problem is compounded by the requirement for some very tight and careful steering at certain parts of the game. Having said all that, if you are prepared to persevere with the controls you will no doubt in time manage to overcome this difficulty. But be prepared to run the first part of the course several times if you want to achieve this.

It is a shame that this aspect of Fifth Gear is so tricky because it marks two otherwise good 16-bit conversions. Still, if you enjoy driving games and are looking for a particularly hairy challenge then Fifth Gear might be worth a look.

— Laurence Griffiths

TANK simulations seem to be the flavor of the day at the moment. A couple of issues back we looked at the impressive M1 Tank Platoon from Monopros. In last month's issue we reviewed the 3Darc-based game, Conqueror, from Rainbow Arts, which, like Sherman M4, simulates battle scenarios from World War II. This month also sees reviews of Oxygen/Monopros's Omega, and Dark Century from Titus — both futuristic tank simulations which allow you to adapt your own battle logic by using the built-in programming languages.

Omega's M4 is something of a tribute to the vehicle of the title, which played a significant

Dark Century — one of the opposition gives up its armor on the 82.

The Sherman Campaign on the 82 shows both the interior of one of the Sherman's.

SHERMAN M4

Yet another tank sim
enters the fray as
LORICIEL/U.S.GOLD
show their appreciation

for the allied workhorse of
World War II

role in many WWII campaigns. This simulation allows you to play three scenarios with the tank Normandy, Ardennes, and North Africa. Each is characterized by distinctive background graphics, although the filled vectors that are used to create objects like tanks, trees, buildings, and bunkers remain the same throughout the changes to camouflage of courses.

Each of the campaigns is split into several missions, all of which must be undertaken successfully by your squadron (which comprises four Shermans and two jeeps). You are given the option of playing each of the campaign missions separately, which is obviously easier, and therefore a good choice for beginning players.

One thing that becomes immediately apparent with this simulation is the possibility for determining yourself the rate of strategy to enable type play. It is not only very easy to switch your control between any of the four tanks, but also a simple matter to flip between manual control and "automatic pilot." Admittedly this facility is also available in Conqueror, but here it has been particularly well implemented. The advantage of having the controls arranged in this way is that you can choose to play almost entirely with the map (just giving battle orders to your vehicles as and when necessary) or you can become actively involved in each offensive or defensive action by taking manual control of one of the four Shermans.

Orders are given via the radio and in conjunction with the map, which shows the locations of enemy and allied vehicles, bunkers and emplacements, and all the other normal cartographic features. You give movement orders to your vehicles by placing a cross-hair on the des-

ination. Tanks under automatic control will do their best to follow your orders but may be side-tracked, if they come under attack for instance.

At all times the individual vehicles and your HQ report back to you via a scrolling message window at the bottom of the screen. This is very useful when you are in the map mode for warning you of ambush as well as new directions.

As well as all the essential bits and pieces, the game also boasts a few graphic features. You can select between interior view (which is best for shooting because it's the only mode in which you get sighted) and an exterior view. While the exterior view is called up you can switch between four different viewing angles. There is also a telescope mode, in which you can only see a small section of the forward view, but each object that comes into sight is identified.

Sherman M4 is certainly a very attractive game, and all the bits are in the right places (which will please hardened tank fans). The moments are a little too easy to begin with, but you can alter the parameters for both allied and enemy forces to even up the scales a bit. My only criticism of the game is that it is almost totally lacking in atmosphere. The game does not manage to conjure up any sense of reality here. It is this factor alone that stops me from unreservedly recommending this game.

■ Laurence Isott

Omega's built-in map editor lets you place your own units on the battlefield to alter game play.

PC

Available to computers on the graphics front (386), the hardware is demanding a fast processor, and especially considerable RAM. However, the game is for the past a (20-25) years it is not faster than the 371 is. The only problem is the complete lack of atmosphere, combined with all of the usual 3D PC waste (and so, there is no real reason for the lack of the game).

The gloves continue... as you can see this game's costumes are a lot of different products (some of these graphics aren't 100% new)

KID GLOVES

SUPER Mario Brothers, Bubble Bobble, Vermaser, Alice Zealand Story, and Rainbow Islands are just a few of the titles to exploit the recent rise of cute-as-games. You know the sort of thing—sprites that look like they've just walked out of the wildest Hanna-Barbera cartoon you can think of, and sound effects to match. Now Logotron have topped the stakes with the release of Kid Gloves, which is so cute it brings tears to your eyes.

The idea behind this one is, that, being tired of listening to his uncle Indiana (Shannon Soundco) rattling on about his adventures, young Koi (that's you, m'lady) wanders off into uncle Indy's study where he finds a pair of old red leather boxing gloves. Trying them on he finds himself magically transported to a parallel forest. And then the fun begins.

Kid Gloves is a fairly traditional platform game. Your aim is to get from the left to the right side of each screen by jumping from one platform to another. Unlike some recent similar releases, Kid Gloves does not scroll, but flips from one screen to another. This system actually does not really detract from the game, but adds to the challenge because sometimes you will have to double back to an earlier screen to solve a later one.

There are five levels to complete including Somewhere in the Frozen Woods (with extra-cute penguins), London: Industrial Revolution (which features various animated machine parts), and Psychodelia (which is set at all recommended to readers who suffer from epilepsy). Each level consists of five screens. Once you reach the right hand side of the tenth screen the gloves will transport you to the next level.

Like all good platform games there are a number of alternative weapons to use against the bad guys. You begin with the death voice

LOGOTRON double the stakes in the super-cute jump-'n'-collect platform market

Psychodelia is quite... well... psychodelia. What else is new?

Psychodelia is quite... well... psychodelia. What else is new?

PREDICTED INTEREST CURVE

This will be multiplied by the game from the moment it first starts. This upward tilt of interest gradually also affects the game. This will probably give it up right after it starts, perhaps for a few minutes. Then you'll know right after the release that it's nothing that you will want to play it again.

RELEASE BOX

ATARI ST	£24.999	OUT NOW
AMIGA	£22.999	IMMINENT

ATARI ST

Kid Gloves immediately makes an impact on the software front. The quality is of very average and there is lots of variety, some of the levels. The sound too, also has some very good and some, certainly very good, speech as well as a variety of effects. It's very well presented and highly playable. It's a very good game, and it's a lot better than the others.

IMPORTED	£24.999	825
RETAIL	£22.999	

which bounce around the screen hitting enemies, but require several hits to destroy large creatures. Other weapons to be had are Flares, Deathtraps, and Megablasts. These can be obtained in the occasional shops (again something to be found in most good platform games).

What is a little more unusual are the spells that are available to you. There are six different spells, one of which can be used on each screen providing you have the magic. Unfortunately you can never predict which spell will be used or how effective it will be, as they are obviously intended as something of a last resort.

Unlike many similar games, Kid Gloves involves a lot more than firing your jumps correctly and doing away with various enemies. There are particular ways to solve each screen and maximize your gains (which in this case are fruit for points, and cash for shopping). Sometimes, the disappearing walls and extra monsters are controlled by time-outs so if you hang around for long enough on a screen this can have either beneficial or detrimental effects, depending on the stage.

You will also have to collect keys in order to get you past certain obstacles. Even if you have the keys, a lot of careful thinking is required. A very useful feature if you do find a screen is 'back in time'. This allows you to go back three screens and re-run them in a far better option than having to replay the whole game.

On the whole Kid Gloves doesn't really offer anything that you can't get in other platform games, with the possible exception of the magic feature and the 'back in time' feature. Having said that this sort of game is fairly timeless, and cute fans will probably not be disappointed to see another one of the others. Definitely one of the most attractive platform games to be released for some time.

— Lawrence Sanders

PLAYER MANAGER

ANCO get into the foxy big-time with a *Kick Off* sequel that gives you the chance to hire and fire as well as get the goals in.

IMAGINE all the fun of *Kick Off* with a strategic management game booted on. That is exactly what *Ons Ons of Kick Off* time has dished up for fans.

Player Manager offers a wealth of management options in an easy-to-implement, coordinator play system.

You start by picking your team. A squad of thirteen players have to be chosen to take part in a full league and cup programme.

There are many weighty managerial decisions to be made. You can study the form of all the players in the list, check out their transfer fee asking price, and even improve on their performance by selecting appropriate training.

To find the height of championship campaigns the deviants have been restricted to five or six of the most famous teams in that league. Right Shovelers have been taken here. Take Liverpool three, for example. One of the teams present is called "Bristol". But Bristol what? City or Rangers? Surely it would have been better to opt for Bristol City if there was not room for both - not only to add realism, but also because City are the biggest and historically most successful team from the west county.

After the game options, the game really starts in *Ons Ons* when you start the window called record.

But this is a minor gear and the overall decision to find the number of teams is a serious one.

You begin your managerial career as Player Manager in the Third Division. Your impressive international career like the fans and club officials with hope that you will provide the spark that will end their residence in the foxy Third. But it's a funny old game football and a manager's existence is a precarious one, as you will soon discover if the goals don't start going in.

When you have set up your team, checked the transfer list, club finances, carried out all pre-match training and practised tactics in time for the Kick Off. Part of the original will reorg. rise the list soccer game immediately.

On Match Day you have a decision to make. Are you going to select your self and on in the frantic and to end action of *Kick Off*, or are you going to stay on the bench where you have a number of match monitoring devices at your finger tips.

The best of these is the camera which you can instruct to follow the ball or team it on a player who you want to keep a closer eye on. Matches can be played at normal *Kick Off* speed or fast mode, viewed from above in a rectangle which shows the whole pitch in miniature - your team scrambling around like bugs.

If you decide to play then you have to choose to play in another like best option or as a team, where you control all of the players in your team. Once the match is in progress it plays just like *Kick Off*, with the same unique look and variety of set piece moves that made the game such a hit.

Further versions planned.

After each match you get a results service of all the other league games in cup ties. Depending on the performance of your side you may wish to go back to the man menu to select training, transfers, or have a look at the League Placings. One option that may not wish to select is the Club Information - where you are given the board verdict on your performance.

Even if you avoid the view of your board there is no way of missing the latest updates that appear after the game on Match Day. These reports provide useful snippets of information about real clubs. Things like players on the move, manager sackings and spending lifts.

The Coach Report is another vital element too, showing the coach that wants to keep in touch. The coach provides updates on individual and team morale, both of which directly affect team performance.

Of the management screens, the Tactical Training window is the best. This enables you to set up a number of moves that you can execute on match day, as well as selecting and experimenting with different formations.

The player statistics are sufficiently comprehensive to satisfy the most pedantic of arm chair managers, with ratings in all of the vital stat categories. The save option also enables you to play a full league championship if you have a whole person to spare.

The beauty of Player Manager is that it successfully blends a challenging soccer management game with all of the frantic and to end arcade action of *Kick Off*. Designers have been trying to marry arcade football with management games for years - almost always failing abysmally. Player Manager brings it all in style.

By Eugene Levy

Games themselves - match day action is replete with all the excitement of the real thing. You can't see the pitch or your own team's on and join in.

ANCO

CROSSBOW

THE LEGEND OF WILLIAM TELL

WILLIAM Tell and crossbows don't go together like Scotty Caper and a couple of robbers. Please, understand the intricacies of arrows and quivers better than Tell and he's a difficult man to teach in scenarios as well. Otherwise, on the other hand, it's something he doesn't excel at. Unsurprisingly, he's not too managed to get himself into a scrape with the evil duke Gessler who's throwing his interpersonal for refusing to bow down to the duke's hat. For a man like Tell this isn't a matter of choice; he's determined to find his son and give Gessler a lesson he'll never forget.

The search for Tell junior turns out to be an on-screen arcade adventure with plenty of fighting sequences thrown in. Tell's exploits, which take place in the top half of the screen, are directed using a selection of icons.

Basically, it's a question of exploring the countryside, collecting objects and dealing with the people and animals that you meet. Equipment is your first priority. Back at your hut you'll find a staff and an axe but the forest itself holds a whole armoury of extra weapons, different types of arrows, crossbows and arrow winders. Any jewelry and travel documents lying about are bound to come in useful; provisions are essential if William's energy is running low.

It's best to deal with those characters by talking to them. Some will give you an object without any problem at all; others need to be persuaded with a morsel of food or a little kind word. Icons let you offer provisions, jewels or show papers though when you start out you'll have limited supplies of these.

Will manages to get Gessler's black knights on a better footing.

SCREEN 7
cross swords with
ancient legend in
this new animated
arcade adventure.

Gessler's black knights are under instructions to arrest anyone who bears a passing resemblance to William Tell. However much you try to avoid them, you'll have to go into combat eventually. The appropriate icon lets you choose your weapon and execute a few basic fighting moves. If you choose the crossbow, a target positioning window appears at the base of the screen; it's up to you to set the sights yourself.

There's obviously plenty of substance to the story; certainly enough to support hours of playing time—if you can spare it. Even so, *The Legend of William Tell* is good rather than outstanding; a lot of the location and character graphics are repeated and it takes a fair amount of exploration before you start to make much progress. Not only that, some of the initial fighting sequences are extremely tough and may put you off if you're not very patient. Definitely one to consider only if you've got lots of time on your hands and are addicted to arcade adventures.

● **Tell Hunt**

William Tell tries to shoot his way into the stronghold without any success.

PREDICTED INTEREST CURVE

For a fast arcade adventure, but not a really good one either. Your initial expectations are set that right, and you soon realize that much more to hold your interest after the first few minutes. Your interest will peak once you've got the hang of things. It's a curve worth your interest at a 4.5/10.

PIPEMANIA

I can still remember quite clearly an old connoisseur in which a little sliver of meat stuffed in was mainly round a series of rectangular sliding blocks, each of which contained a different shaped section of track. The idea was to ensure that the train continued to move for as long as possible before meeting an obstruction, or the end of the track. This was achieved by sliding the sections of track around the corners in a regular way to the slope, sliding later points. Considering the simplicity of the idea, the resultant game was wonderfully addictive.

Now Entertainment International have produced a game for mimes which is superficially similar, and just as addictive. In *Pipemania*, rather than a stream train you must control the flow of a rather pucky substance called *Ploos*, and instead of sections of track you must place sections of pipe in order that the pucky stuff can continue flowing without leakage.

O.K. So far, so good. You simply tack sections of pipe onto the source pipe to form a length of tubing which the stiff pipe has trouble through. There are complications, however. To begin with you have a fairly respectable amount of time to make headway with your construction, but once the gas starts flowing it continues to do so at a steady rate, leaving you little time to stop and think about what you are doing.

The other little complication is that sections of pipe are presented to you in a set order, and you must suit them as they come, but you will often have to look at the stack of pieces to see what is in the pipeline, as it were. It is permissible to place a new section of pipe over any pipe you like long as it is not used to replace the original piece. This process, known as "hoisting," takes more time than placing a section of pipe in an empty space. It is no good simply dumping unwanted pieces anywhere other — at the end of each round, any pieces of pipe that are useless are removed, along with a suitable chunk of your score.

If you get clever enough to be able to form loops and other fancy structures you receive bonus points. There are also points to be had for directing the sticky stuff through pipe sections that are closed or clogged before the stick-

ENTERTAINMENT
INTERNATIONAL

show that plumbing
can be fun...

of the round. Then there are obstacles to be avoided, and these become more complicated with each passing round.

At the end of each level you get to play a bonus screen. The objective is the same, but this time the pieces of pipe slide back and forth at the top of the screen and must be dropped into place.

there are shades of Terra base). This is even more difficult than the standard game because, of course, pipe sections must be stacked, which entails using a lot of otherwise useless bits (see below).

A useful feature is the use of passwords to gain entry to levels you have reached in previous games. This should give the game a longer life than it would otherwise have had if players had been forced to continuously replay levels they had already mastered.

Pipernia is destined to become a huge success. It has all the elements that make Tetris such a superb game: an engaging simplicity, instant accessibility, timelessness, and tons of fun. When you add the two-player and advanced features of the game, it is not difficult to see that a monster hit is in the making. Live successfully, recommended.

The later levels show an increase in standards, resources and final page numbers.

© 2004 Blackwell Publishing Ltd, *Journal of Internal Medicine* 255: 105–112

Apparatus hasn't examined the streets in the light yet, it has already made a hell of an impression on the political scene, and even the police.

Luckies were quick to embrace the program in marketing in the states, and by all accounts, it is already doing very well over there. As you can see from our reference list, Entertainment International got the sense that this game will have universal appeal that

In addition to the three websites, there is a 1-800-421-1212 toll-free number - and it offers real-time, automated advice to developers for various gets (ask us for the number rather than the toll-free number).

And that's not the end of it. A version of the game for the Nintendo Gameboy and an NES cartridge will both be available around the middle of the year.

CONSOLE CAPERS

ACE looks at some of the latest releases for the Sega Master System

TENNIS ACE

I, Lender! I, McKill! Do these names sound familiar? Well, *Tennis Ace* incorporates them in its comprehensive attempt to simulate the fast-paced sport, and (and for good measure) gives you bags of options, multiple ball movement and occasional flashes of humour (bring back Don Lynam, I say).

Every possible permutation of two players and computer opponents has been included; you can play solo against the computer or against a friend, or you can play with a friend in a doubles match against two simulated opponents or with a computer partner against a friend and his partner... in fact, it's this flexibility which makes the action enjoyable. In one-player mode even it would die in an early death.

There are four basic types of game: training (which helps to hone your skill level), Open Tournament (against another human player), Exhibition match (so you can show off your talent) and Grand Slam Tournament, where you face the top boys (and girls). At the top of this, there are three types of court surface to play on - clay (high bounces), grass (medium rebound) and hard court (high and wide bounces) - all of which do play significantly differently.

The action is presented from overhead, the court stretching to accommodate shots travelling

When playing *Tennis Ace*, you must be an overhead shot - well, a little bit, but not head-on and not the whole court.

beyond the lines. Serving is different, however; it's a '3D' side-on view which switches to overhead once the ball has been struck. Many different types of shot are available, including lobs, drop shots, volleys and smashes, all of which help to spice up the action, which doesn't (and maybe should) move along at a heart-stopping pace.

The one major niggle is the amount of time it takes the program between points. You have to wait at least fifteen seconds (this may not sound so bad, and for the first few games it isn't, but when you're playing three sets (particularly against the computer) it gets on your nerves.

Tennis Ace isn't a bad sports sim, but it could have been better. The range of options is great, but the actual in-game variety is not so hot. Playing alone can become tedious, even with a password system; fortunately, the two-player options more than make up for this. However, if you haven't got a friend coming round every night, you might want more for your £25 than just a decent tennis game.

Initially, *Tennis Ace* strikes you as being for his only: the computer opponents are predictable, and the collision detection between ball and racket is very kind. Then you enter the Grand Slam tournament and things begin to get harder - but not unduly so. After a month's play, you'll probably find that you can beat most of the opposition quite easily and, unfortunately, that's when the one-player game dies.

More comprehensive than *Super Tennis*, this is still far from being the perfect simulation.

The graphics are detailed enough and the ball movement works very well, but the sound gates you out with the wide choice of tunes open to you. Despite the huge variety of options, the action itself doesn't quite hit the mark for a solo player. For two players, though, it's great!

The arcade must be different from a video shot - not necessarily a conclusion to point of view.

PSYCHO FOX

Don't be put off by the title. The fox in Sega's latest platform caper is really quite cute. Your challenge is to negotiate ferns around the various platforms and smash heads in a bid to defeat the evil Mad Maxx Darnright.

Foxes are misapprehended creatures in Japan - worshipped as fun-tempters as gods of the forest. But this reformed position is about to be stopped by Darnright, who has taken the world into terror. He has populated the land with evil creatures bent on destruction.

Psycho Fox must visit all seven stages of the game, eliminating these creatures with what ever weapons he can muster. The stages have three rounds each and you have just three lives with which to conquer its extensive network of platforms.

Your fox can punch the enemies to destroy them or jump on them if he is agile enough. He can also mind the support of his trusty ally - Bird Fly. Bird Fly will launch himself at the enemy and knock them off the platform, leaving a path for Psycho Fox. To get Bird Fly to punch on your shoulder you must first crack open an egg - but be careful in doing this as some of the eggs contain enemies.

The Psycho Stick is another useful artifact to look out for. It enables Psycho Fox to transform into either a hippopotamus, monkey, or a tiger. Certain forms are more appropriate than others depending on the situation. The hippo, for example, has powerful punching power that can smash through walls but he weighs a good

deal and may sink through some of the platforms.

Taking the correct route is the key to Psycho Fox, as some paths are a good deal more difficult than others.

Alongside all the hazards and creatures out to get you there are also plenty of "bribe" for Psycho Fox. There are incident jumping boards which enable him to manipulate high into the air to move around. There are also moving poles, jumping boards, and rills and bridges.

Steps are well markers of order in the Psycho Fox (although in this they don't make sense).

Psycho Fox - the swim through the clouds is just one of the things.

SEGA	ON THE	OUT NOW
Gameplay: 4	Graphics: 7	
Audio: 5	Fun Factor: 8	835

Meanwhile, Psycho Fox takes a bit of practice. He can be made to move a considerable speed and carries the momentum of the speed into the air with his leap, carrying forward a good deal. On landing you can immediately right his position by moving the joystick in the opposite direction, often creating an excellent "bouncing head" effect as he lands on a platform. Just like a Tom and Jerry cartoon.

Before you confront Dement's stage, where all of the traps that you have previously encountered must be negotiated again. As if this wasn't enough to worry about there are also some tricky situations that can throw you off the word. Dement himself is as tough to defeat as any monsterhead and of level ready from a "shoot 'em up" - a huge sprite taking up a third of the screen.

Apart from the main business of platform leaping in an attempt to confront Dement there is also a secondary game called *Archie*, where you place bets with the money you have gathered in the platform scenes on how far you will get along the path. At the end of each path is a prize. The more money you have, the more paths you can bet on.

Secondary games are popular in Japanese console games, particularly those involving an element of gambling, and they certainly do add

an extra dimension, as well as providing light relief from the main business of the challenge.

Psycho Fox is a very much a game for platform aficionados. It is a Metroid-style and features some very tough pieces of platforming. It has no saving value. There is more than one way to get around it, adding to the appeal. The Secondary Game is also fun, offering something else to focus about apart from how many of the platforms you have to be mastered.

Graphically the game is superb, particularly some of the later stages such as the Ice Zone, Wild Zone, and Underground Caves. Perhaps not quite as appealing as the other later games, but certainly one of the best platform offerings available for the Master System.

By Eugene Levy

SPELLCASTER

The Japanese love role-playing games. They are the most popular type of game amongst the steady millions of console owners, regularly outstripping the latest shoot 'em ups and arcade games.

This explains the comparatively high number that are available for the Sega. But if you have always assumed that RPG's were all that exciting and adventuring are not for you then you might be wise to reconsider. Spellcaster is a very different type of game. It is much more arcade than computer RPG, and the plot and characters are all introduced to you in steady cartoon-style cutscenes.

You are the ambitious young warrior Kari, determined to prove your valor to the leader Dabak. An opportunity arises when one of Dabak's warriors are slaughtered by a mysterious enemy when they were dispatched to guard some remote mountain temples.

Dabak instructs you to journey to Iguro to find out what happened to his men. This is where the game begins, as you find yourself journeying through a forest and under attack from strange teddybear-like creatures.

You are armed with a *Sidoko* which you can throw at the enemy to kill them before they can touch you and reduce your strength using which is displayed above the action window. Your energy level is also displayed at the point.

You can enter the *Arise* from the action in Spellcaster, which is where the game departs from most pure RPG style games like *Dungeon Master*. You have to complete each of the nine arcade missions in order to reach the destination, where you encounter other characters whom you can talk to.

Once you reach one of the eleven destinations you are given a menu of possible moves. You select either Move, Talk, Look, Toss, Use, or Spell by highlighting your chosen action with the joystick and pressing fire.

Normally it is best to have a good look around first as the game will give you clues in its descriptions of the location. Look gives you a further "It what" inquired which enables you to move a finger pointer around something in the graphics window display, examining anything that you think may be of use. If something is identified you may use *USE* to grab it.

There are a further seven weapons to be picked up in the game, all of them more powerful than the *Dabak* with which you start. These

are also the spells and you will need to use these during certain action scenes. If you are to survive then and take the mystery.

You have not really got to grips with Spellcaster until you start to wield the magical powers of the spells. The best of them is the *Polio* spell that creates a shield impervious to all the enemy's missile attacks. The *Polio* Spell is one of the most spectacular, bringing down bolts of lightning to strike down your enemies.

You can cast a spell at any time you wish by pressing the pause button. This will bring down the Status Screen where you can select your spell (providing you are carrying it) and then return to the action screen where the spell is executed. This information screen also enables you to use the "Percentage Save" feature which enables you to quit the game and then resume the next time you play at exactly the same position by making a note of the percentage.

Mars calls on the God of the War to restore your strength. *Mars* enables you to fly (very useful in some of the trickier platform action screens). *Fate* gives you a huge and deadly ball of fire, and *Hatten* calls on the God of Winds to whip up a storm to attack your enemies.

There is good variety in the in the action screens that Kari must journey through. Apart from the temples and shrines the quest also takes you into space, across time, and into the Land of the Dead.

Mastery of the use of the spells and weapons makes for a good tough challenge. Ultimately Spellcaster is limited by its finite plot. Once you have done it you are unlikely to play it again. It provides a fun challenge whilst it lasts though.

Spellcaster is more of an arcade game with adventure style graphical rewards between levels than a pure RPG. Its arcade screens are tough and graphically satisfying with the added curiosity of the mystery. A consistent game.

By Eugene Levy

SEGA	ON THE	OUT NOW
Gameplay: 6	Graphics: 7	
Audio: 5	Fun Factor: 8	710

Real beauty of the slaughter of the warriors.

Spellcaster - the first in its meaning the quest.

EVERY cybernetic engineer with his
finger on the pulse knows that
the pinnacle of his career is to join the
Organization of Strategic Intelligence. That's
where the country's experts are designing
cyber tanks - armored vehicles capable of com-
pletely independent fighting, movement and
recovery.

There are two main engineering parts: the chassis and the tank's artificial intelligence. For the chassis it's mainly a question of choosing equipment that calls, drive system, weapon type, energy scanner etc from a menu of available components. New recruits have a budget of 1,000 credits. This increases as the efficiency of your tank design improves, enabling you to purchase more advanced equipment as well as extras such as energy mines, repair kits, defense cloaks and weapon locks.

Every completed design has to be authorized. This works a bit like a primary debugging process. I never actually disassemble anything in

There are several complete battleships on the ship that you can command your own using a construction kit. Other screens allow you to pick the number and type of your opponents as well as whether or not you're going to be fighting in teams. If fitted with a computer, linked to your team may communicate with one another. During the simulation, which runs automatically, you'll be located and monitored throughout the run, your designs can be good enough, you'll be given your budget. If not, it's back to work.

The emphasis is on planning rather than on firing the shot as the ST version displays all units going on (or not too long on) the battlefield. However, it's possible, with its many instructions, view modes, and voice (though introductory graphics teacher, bonus programming) is on the poor side.

GRAPHICS: 7 SOUND: 5
VALUE: 4 FUN: 10/100 **679**

If prisons are overcrowded you just think what it'll be like by AD 2250. Luckily, Titus predict that the governments of the future will come up with an ideal solution, no more messing about with rehabilitation, electronic tagging or psychology - just ship them off to the nearest inhabitable planet and leave them there.

Unfortunately the hardened beneficiaries of this humane venture don't see it quite like that. They've managed to commandeer a selection of specially designed government issue tanks and are turning, not on their prison world. Unless you and your team of penitentiary guards manage to stop them in your own set of armored vehicles, the stolen tanks' complicated self-destruct system is sure to destroy the planet.

Up to a maximum of six tanks (including the enemy) take part in each encounter, which can be played manually or in automatic mode by one or two players. Unlike a car, it's a bit more straightforward driving in manual. Just steer into the position of enemies and allies using the radar and use the joystick to hunt out the prison tanks and blast them to bits.

In automatic it's up to you to program the movements of tanks in advance. This means selecting and arranging a sequence of icons to specify such details as angle of turret, different speeds according to whether you're in attack or surveillance modes, targeting, number of consecutive shots and auto-destruct mechanisms. When you've fiddled about with all this technical

Unfortunately a screen shot does not give an impression of the game's speed. What appears tedious while you're at it is a cinch to watch.

detail to your head's content, you watch the ensuing battle on screen.

It takes a while to get to grips with all of this, as getting the hang of the controls, setting your parameters and putting together an effective program is a complex, strategic process. This is clearly not the sort of game you can just pick up and play for half an hour - it requires study and plenty of practice.

As such it resembles Origin's complicated tank programming game, Omega. It can't really match it in terms of complexity, though, and if you're really determined to spend hours programming and watching tanks, Omega, with its artificial intelligence routines, specially designed programming language and its wide variety of vehicles, is bound to be a greater challenge. Dark Century can only cope with a maximum of six tanks and there are few variations in land-scapes, or vehicle capabilities.

Within these limitations, Dark Century is a competently programmed, well-implemented piece of software clearly aimed at gamers with a strong bent towards programming. Even with the manual options, however, its specialized subject matter is unlikely to appeal to the average lover of shoot 'em ups, arcade adventures, even simulations. If you do feel like fiddling away with a manual for a couple of weeks, make sure you know exactly what you're buying first.

Laser Squad from Bludsoft

Laser Squad combines strategy with the use of grenades and a variety of automatic weapons to defeat your foe. You can take the part of leader or hunter—play with a friend and take turns at opposing roles. One player option plays against artificial intelligence or highly developed AI bots!

Laser Squad is a terrific game that is superbly playable and can definitely be recommended as one for the library of any gamer. **Andy Smith, Amiga Format**

Operation Thunderbolt from Ocean

Follow up to last year's No. 1 hit Operation Wolf!

The game brings you enhanced shoot-em-up action for one or two players. Thunderbolt not only reproduces the fun portable shooting gameplay of Wolf, but adds 3D action to the screen as you test your nerve against swooping jets, helicopters, tanks and many more awesome adversaries from the laser sights, or the battlefield view, but watch out for those on-footground enemies.

"Wolf" is the only way to describe Thunderbolt! ...not a game for the faint-hearted!"
Tommy White, Amstrad Action

AMIGA

Coming on two disks and from the visual quality and little editing needed will be the star of the game that are the hallmarks of the games on 16-bit software house. (AMIGA) We have had from other such as, but that for some effects used from their own imagination. (AMIGA) The game takes a lot of different visual effects, including a very colorful graphics to look at and makes good use of the Amiga.

GRAPHICS	4	FOR THE	7
SOUND	4	FOR THE	790

Three arcade challenges – well two and a half really – cobbled together in one game. Arcade adventure fans will not be disappointed with *Stryx*. There is still a shortage of decent 16-bit fun to be had on 16-bit machines and *Stryx* helps fill the gap.

SEGA[®] *from Virgin*

MEGA DRIVE WARNING!

Sega of Japan and Virgin Mastertronic, as the exclusive authorised distributor for Sega in the UK, strongly advise all potential customers against purchasing 'grey' imported 16-bit MegaDrives.

MegaDrives which have already reached the UK have been unofficially converted to run on the PAL system; this work has NOT been authorised by either company and therefore the hardware is NOT covered by any guarantee of safety or workmanship and will NOT receive any other sales service from Sega or Virgin Mastertronic.

Sega also announces that 'grey' imported MegaDrives will be incompatible with the software which will be marketed in Europe when the official Mega Drive is launched later this year, and that owners of the 'grey' imports will not therefore be able to run this software.

SEARCH FOR THE TITANIC

WHEN the movie concluded in 1912, the *Titanic* was the biggest moving object ever built by man. She weighed 56,000 tons, carried over 2,000 passengers and was declared the ultimate unsinkable ship. After the collision with the iceberg, which came just four days into her maiden voyage, the exact location of the wreck remained an unsolvable mystery, until it was finally discovered in 1985. Capstone's oceanographic sim lets you track that search.

Not that the *Titanic* is your immediate objective. Basically, you're short on the necessary resources and need to attract a reputation akin to Jacques Cousteau's before the big sponsors start writing out blank cheques. The only way to do that is to go on low-budget week-long trips (about ten) and bring back plenty of underwater evidence.

Each expedition is divided into two separate phases: planning and execution. Both are heavy on strategy, low on action; most commands are performed via key presses and menu selection. Graphic representation is minimal and confined to the second part.

Planning involves selecting your ship and starting port, deciding what sort of equipment, if any, to buy and hiring enough suitably qualified crew. As you've got to finance salaries and enough water, food and fuel to last the trip as well, your initial budget of \$10,000 isn't likely to stretch very far. That's when you apply for sponsorship from a menu of potential companies picking one of a selection of grant reasons why you want the cash. It's all a question of clinical key presses; the begging, wheedling and groveling (and like real life) promised by the manual, doesn't really come into it.

You can't leave port if you've budgeted as essential arrangements like hiring divers or making enough safety provisions. Get them right and you head out into the open sea. You're after the co-ordinates of one specific wreck and your first job is to get out there in one piece by altering direction and speed.

When you've made it, it's time to survey the ocean floor using divers and any equipment like a minisub, bathyscope, sonar platform or sonar tiler you might have bought. First trip out, you'll probably only be able to afford to send divers down on searching and surveying expeditions to the ocean floor. If you find anything, great, if you don't you'll just have to keep looking.

CAPSTONE/CRL prove that life under the ocean

waves might not be quite as exciting as landlubbers think

to the ocean floor. If you find anything, great, if you don't you'll just have to keep looking.

You couldn't ask for a more complex game-design. There are more than enough options to allow for innumerable different wreck-seeking trips and lots of screens and tables to give information on factors which might affect their outcome. Boat weather, crew health and how carefully you've stocked up are all important considerations.

What is missing is any real sense of suspense or excitement. The action moves very slowly and there's not enough visual representation or sound to give much incentive for exploration. This is no problem if you like your simulations long, involved and ponderous. If you don't, the repetitive diving and searching (which takes ages to reap any rewards and has practically no visual impact) will just get too tedious. One for very serious simulation fans only.

● **Full Review**

When your boat is engaged in a trip, events are viewed from a different perspective. You can't forget the boat for a while.

PAUL Gascoigne, an any-footed footballer, but not his, but will tell you it's like George Best. They'll inform you that tells one of those players who had an amazing amount of skill and potential, but his time passed him down. 'The Blues Bar Boy' and 'Patsy' are just a couple of the inside, cheeky characterisations; most people there and this is where *Empire* or *House of Cards* stars in.

EA's *Ultimate Soccer* gives you three broad options: you can play a single game, create a league or generate a cup competition. If you play a draft, you're offered the choice of one or two players, each of whom can select teams (taken from the current First Division), name their players individually and decide on skill levels and tactics.

League and Cup competitions follow a similar pattern. For example, in both you divide on the management into (between five and 20 teams for the League, and between eight and 64 for the Cup), then create a new team or load a saved one. You can also name the context; unfortunately, the program doesn't allow many letters, so if you wanted to call your cup "Liffordside", it would read "Lifford". There's an extra option which allows saved code from an old machine to load into any other old machine - a nice touch.

THE BATTLE OF BATTLE

Although in the past (2 to 4 weeks), several physicians have always seen the first (major) squint after the surgery (but the past 4 years) there has been a slight pattern to squint after eye surgery to the strabismic (squinting) strabismic cases of amblyopia.

Perhaps the first program to truly make its mark was Hewlett's relationship-drama-making programming super star Les Grossman (also responsible for superlative games like *House of Cards* and the original *Baywatch* movies). *DC* continues.

What's more, however, the trend has been quite steady in America's largest cities. This pattern, however, may reflect the fact that cities are the nation's largest producers.

The system used is a big letdown. The controls are badly type-honored in change direction when the viewpoint changes, and you have to press "Enter" to access the goalscorer, and the graphics are poor, particularly the sense of perspective, the pitch proportions and the player animation. This latter aspect is so jerky that it's hard to see what's going on a lot of the time, a fact accentuated by the seemingly endless wait

RESEARCH DESIGN

Confusing and disappointing to begin with, *Star Wars: Super Troopers* never went inside the headspace of mindlessly producing the good, or even planets of bodiless games cinema. It was the time for the style of *Star Wars* (which is nothing), the multiple options for generating your own weapons and space maps and how you happen to be made or so. After that, the game will be assigned to the far corner of the 1990s computer game.

clashes of mood of the other players on the pitch. To say it all, the sound is limited to a few mumbled lines and vague roaring noises.

If the other versions are anything like this, avoid them. The programmers don't seem to have captured the feel, speed or excitement of real football, and certainly haven't matched the addictiveness of other soccer sims. It's enough to put fans back on the Man Utd scene.

VENDETTA

To date the Last Ninja series have been System 70 suggest products. All that seemed to change with Vendetta, a mixture of Ninja, Outrun and a lot of movement.

It may look like *Last Night's* programming, routines with different guests, but the whole thing has been kicked up a gear. The system with a video display displaying some of the footage of a nuclear physicist's daughter. Rather than the usual carpool demands these interviews are facing the professor Dr. David Stern a nuclear bomb, allowing Stern to spread over more than throughout the world. Playing the part of a lone vigilante it's close to us to rescue the Prof. and his daughter before

Figure 1 consists of two bar charts. The left chart is titled 'All respondents' and the right chart is titled 'Respondents who have been personally affected by the economic crisis'. Both charts show the percentage of respondents for four levels of agreement with the statement 'The government should do more to help people who are struggling financially'. The y-axis represents the percentage, ranging from 0 to 100. The x-axis lists the levels of agreement: 'Strongly agree', 'Somewhat agree', 'Somewhat disagree', and 'Strongly disagree'.

Level of Agreement	All respondents (%)	Respondents who have been personally affected by the economic crisis (%)
Strongly agree	~65	~75
Somewhat agree	~25	~20
Somewhat disagree	~8	~5

Word _____

the bomb is completed. Seeing as you're operating in an above the law status, it's not only the terrorists you have to look out for, but the police.

The first level turns out to be a warehouse, staffed with terrorists. Though some of them are armed, most of them tend to be relatively harmless, especially when you find a weapon. No hardly deadly harmless stuff or blow here, we're talking machine guns that can cut through most of

with the ability to lie and run backward) makes you pretty confident, until you come across the monks in leather body suits. Then it's down to the thump and grind of martial arts to get you through.

Discovery is the better part of progress in this case, which means keeping an eye out for every possible object. Apart from finding weapons you need to find computer disks, video recordings and other evidence to prove the bad guy's guilt and that you're not one of them.

It's not just a case of leaving one level and entering the next. Nowadays, levels travel from place to place in a turbo-charged Porsche, in an excellent driving sequence. The road scrolls perfectly, all the bends, turns and junctions move as smoothly as roads can be on an A-16 micro. With the addition of ferocious cars and minute junctions the whole thing's a real buster.

Handetta isn't your usual run-of-the-mill arcade adventure. The graphics are excellent, displayed fast and don't confuse matters too

C6.4 Consequently, identifying a role for the basal telomeres for action is again, like a scenario for the dynamic basal end, the critical if not obvious. The gene expression information, right from the start, and lots of information are incorporated throughout.

A great variety of genes, from the basal telomeres to the basal end, are expressed and control, leading to the basal telomeres being given.

much. A driving soundtrack accompanies the graphics and adds even more atmosphere to an already rich scene.

The last of the three levels is set in a larger, 40-ft. hemlock-bull pine, a giant. To give the effect of a confined space the screen is cut down to a third of its size. Leaving no room for maneuver and even less room to fight, it's worth noting that the better you get the more bloodlessly the action is. All the opponents come complete with kick's and bullet sprockets, all the credit lines are guarded and the pace is really slowed on

Probably the best thing about *Hierbert* is its accessibility. It's easy to get into, taxing and doesn't leave you a gibbering wreck with zero problems. Definitely a game worth buying. If anything, it tops *Blith* as one of the best single-robot games in recent time.

[illegible]

LORDS OF CHAOS

AS the comedian Richard Dwyer observed recently, if a hurricane hit Harlem Plaza, it would make an improvement. "Concorde" was the middle name of whoever designed the town centre, a geometric mass of the stuff, with post-war school-building aesthetics and a depressing few in sharp corners and blind paving stones.

Hard then to believe that one of Britain's most consistently good development houses hasn't chosen themselves off a concrete walkway in despair instead of writing a string of great strategy games. Yet Target Games are busy away on the next potential hit now, a "fantasy, strategy, roleplaying game" called *Lord of Chaos*.

The aim of the game is simple – playing a wizard you must defeat other wizards and reach a portal somewhere on the landscape within a certain number of turns – it is the method of play and the execution of strategy which makes the game cause for interest. For the winning aspect of the game is magic, the use, selection and potency of spells to defeat all of your opponents.

There are several types of spells. Creature spells range from the utterly pathetic, giant bat, to the ultimate – red, green and gold dragons. Projectile spells such as lightning can be useful in times of crises and close combat; terrain

TARGET GAMES reveals its strategy for the past, present and future

Target Games, with the delightful Marlow in the background

spells (the Flood) multiply endlessly to make a landscape impossible; more often-worldly incantations, such as Subversion do things like turn an opponent's creature to your own side.

Each spell costs "mana" to cast, which regenerates each turn and can be boosted by some of the objects found on the huge scrolling landscape (viewed from above with the creatures displayed in a pseudo-3D fashion). The amount of "mana" needed is dependent upon the level of the spell, the higher the level the greater the drain.

Every creature, even a wizard, has a certain number of Action Points which are used up in a turn by movement, being hit, or if a wizard is selected, casting spells.

A wizard will send their creatures off to seek and destroy the other wizards (as to right, which can be either human or computer controlled and who take it in turns to move) and their creatures as well as pick-up objects on the ground and in chests. These aid him and are vital for the casting of some spells – notably the dragon spells.

The game ends when the last, surviving wizard (who by the time should have many victory points) makes it to the portal and on to the next level. During the wizard definition section (which, at the moment, is a separate program) the player builds the strengths and attributes of a character and chooses spells to return for points.

"The idea of using magic in a strategy game gives an infinite variety of strategies," says Julian Gollop, a founder of Target Games. He is one of the three programmers working on the

project – his brother, Nick Gollop, is working on the Commodore full version while Martin Soule is embarking upon 32-bit versions.

Julian has an intriguing past. He began programming in 1984 for the short-lived Red Shift software before moving on to Games Workshop where he wrote the original *Chaos* (re-released on Fiebert Silver last year) upon which *Lord of Chaos* is vaguely based. His break came in 1986 with the highly acclaimed *Robotnik* for Fiebert Silver, followed by the sequel, *Robotnik 2* in 1987/8.

His most recent work, *Laser Squad*, the first for Target Games, gained yet more acclaim, combining strategy with a touch of action. It was recently published by Blade Software for its major formats.

Julian is programming the 256 versions and is the ideas-forgo behind this game. What inspired him to get into strategy games? "It's little bit of Tolkien figures for *Lord of the Rings*. Five or six fantasy figures – a few hobbits and orcs and things like that". In fact, the original *Chaos* was a board game.

"To create things is good," announces Julian, moving on to a suitable philosophy for Target Games – "Get drunk" shouts Martin Soule from the background – "to break the straitjacket of mainstream computer gaming" comes back Julian.

"*Lord of Chaos* is as good as we can do on 256," he says. "It's fantastically complex compared to *Laser Squad*". Of course, the 16-bit versions will be significantly enhanced with more spells and adventure-type things. There may even be a quest: "to recover a magical staff or whatever".

And what about his hopes for the game? "For it to be liked by the people that play it... to be recognised as something a bit different. If people are playing the game in a few years' time, I'll be happy."

THE SEVEN GATES OF JAMBALA

Discover if seven is

GRANDSLAMTHALION's

lucky number in their new

platformer/cutie

SHORT on leg and small in stature but big on courage and cuteness factor, clowns, jacks and flower-stem are favourite themes in arcade adventures. Dragon, the corner's apprentice doesn't differ significantly from the norm - but then nor does its arcade adventure. In fact, it looks like a generic hybrid, cleverly constructed from the components of several other platform games.

The most notable resemblance is to *The Simpsons Team Spirit* - the horizontally scrolling landscape looks very similar and though the execution isn't quite as slick, the plot runs along roughly the same lines. Partly by accident and partly by intention design, Dragon has taken into the notorious playstyle of Jambala. The only way out is to travel through seven different stages in search of all the scattered pieces of a magic wand and then put them together again in a specially designed arcade sequence.

As he's skipping along ledges, leaping across chasms, searching through passages and trying to access the right sets of doors, our small and plucky hero has to fight his way through the usual selection of underground beasts. Giant wings, ripping rats and strange green creatures get too billing in Jambala's magical menagerie. A couple of flashes with a fairly devised spell usually put them out of their misery. Some even have stronger, long-range spells behind - useful for defeating the slightly larger end-of-level threats.

Wandering around Jambala collecting spells of people does have its compensations. Every now and then you pick up goodies like extra lives, even bigger, better spells, and numbers. The latter are designed to help you in a 60% search of the ground for gold and other treasures. You can spend them in the locations marked by little wooden doors you find along the way. The idea is that their students dispense information, extra jumping ability and the like at a reasonable

price. Under the sheets of Oak Whittington's London, however, the paths of Jambala aren't paved with gold, so shopkeepers won't find much they can afford to buy.

In fact, for a sophisticated platform based adventure, pickups are pretty thin on the ground. As a result Dragon's frantic firing and fringing scores lower on variety and action than you might expect. Coupled with the absence of two-way horizontal scrolling and some occasionally tight collision detection this does tend to reduce Jambala's long-term appeal.

There is a plus side though. The graphics and sound create just the right sort of magical atmosphere and the Dragon sprite is made all the more endearing (or nauseating depending on how you feel about it) by some slickly animated twitches. For serious gamers players its average content won't provide as much of a challenge as some of the other platformers around - *Jelly's Magic Hammer* or *Team World*, for example. Foreign computer owners, and platform addicts might find it has more appeal.

■ Neil Ramsay

Don't forget to jump over the red spikes along the way.

Use the gold coins to buy extra lives or other goodies from the shopkeepers in the game.

Don't forget to jump over the red spikes along the way.

PREDICTED INTEREST CURVE

All mathematics take some getting used to, though the greater complexity of Shaolin's events is definitely designed to teach you to control the action in the future rounds of the game. Besides the obvious, especially in the first and two-player options, contribute to long-term playability. Once a certain estimated end (pay) it's always the one to bring out when you're playing with friends.

With presentation, clear instructions and a suitable controls screen in high level of precision, the new Shaolin is a real sensation at the time when it's not a well-known game. It's not for you and can look better off than in a combination of old and new content, and a few exceptional graphics effects that make it a real surprise.

CHAMPION 2 ADVENTURE 1
 796

MOST beat 'em ups include so many complex fighting moves that they require an initial training period before you really start to get to grips with them. *Chambers of Shaolin* has the usual selection of punches, but instead of ignoring the learning curve, German software house Thalion has actually made a feature of it. The program works in two parts: first you build up your character's skills in six different training events, then when he's experienced enough you send him to disk and enter him in the fighting contest proper.

There are six *Chambers of Shaolin*, each one dedicated to training the body and mind in harmony through a special discipline. Each is aimed at a particular ability like balance, speed or strength and features such supposedly oriental pursuits as jumping between four rings and rotating poles, dodging flying objects, kicking burning barrels off a wooden ledge and chopping through boards with your bare hands (the only punchy wagger). Up to four players can take part; each character can be separately tuned to this.

All this custom circuit training is very nice indeed of the kind of multi-events (Winter Games, etc) Cops used to produce in the good old days. All the events (with the possible exception of the board chopping) are extremely well implemented, easy to get the hang of and good clean fun. In effect, they comprise a medium-sized game in their own right.

Unsurprisingly then, our three head hunters get their share of some fine attention to detail.

CHAMBERS OF SHAOLIN

Does GRANDSLAMU

THALION? Oriental beat-em-up

live up to its Eastern Promise

In this test you must kick the ball high enough to hit the target in order to avoid a collision.

Having found how uncoordinated you really are, it's time to step into the arena and face a number of opponents. The objective is to use your skills which have honed by a rival gang, and to control you'll have to make use of all the skills you learned at the academy – and more. In addition to traditional punches, moves include such specialisations as the splits and the Tigerclaw. The colour of your belt (and consequently your strength) are determined by how

well you did in the *Chambers*. This is more important if you're playing a computer rather than human opponent – the artificial variety is tougher to beat.

Both sections are well-presented, absorbing and enjoyable. Neither outweighs the other; since you've played through the *Chambers* once, you've got two excellent games which are practically independent of one another and give you the added bonus of two and four player options.

The only annoying aspects are the interface – which is never adequate than outstanding – and the uneventful sound. In every other respect *Chambers of Shaolin* lives up to its eastern promise.

by Neil Rennie

This is the second chapter in the game – the one where you learn to control your own destiny.

BIT-MAP BLARNEY!

Travel to a local software house, meet strange exotic programmers, eat a wondrous buffet lunch, walk away with ACE freebies, and get your name in the magazine: all courtesy of the ACE Conferences.

Last month we told you all about the ACE Conferences. If you missed out, the message is that we're organising a series of meetings between you, the readers, and Britain's top software houses. You not only get the chance to meet the programmers and publishers of today's greatest games, but you also get a light lunch, some ACE freebies, and the chance to let the software houses know exactly what you think about the games you play. Chances are you'll also pick up some freebies from the software houses themselves, but we're not promising anything!

Last month we gave you advance warning of some of the conferences to be held in the London area. We're also arranging some in the North of the country, details of which we were planning to print this month but which will now have to wait until the next issue while we complete the necessary arrangements. Expect, however, to get the opportunity to visit Cogan in Manchester, Progress in Liverpool, and US Gold in Birmingham for starters. We'll also do our best to sort something out for readers in Scotland. Any suggestions?

Meanwhile, we've now fixed the date for the first conference (see last). This will be with the infamous Dorset and will give you a chance to get firsthand experience of one of Britain's largest indus-

Graphic illustration courtesy of British Computers. The one that will be coming, behind the curtain! If you submit your Dorset conference card, you will have plenty to see, as well as to hear!

WHAT YOU HAVE TO DO

Each month, we'll let you know about forthcoming conferences around the country. If you think you might be interested in attending one, all you have to do is send us a **postcard** with **your name and address** clearly written, together with a **daytime telephone number** if at all possible. You also need to tell us **which conference** you would be interested in attending (we choose only, please), and **your age**. We need to know how old you are so that we can ensure a good spread of age groups at each conference.

Unfortunately we have to limit the number of people attending each conference to 25. In addition, we have to make a nominal charge of £5.00 to help cover costs. All places are allocated on a first come, first served basis. There is however an exception to both these conditions: as a special offer to subscribers we are giving them **priority allocations** for the first ten places in each conference, and they may also attend **free of charge**. You can find out how to become a subscriber on page 49 (and you get other benefits too - a free issue, a special newsletter, and guaranteed delivery).

As soon as we decide on a date, time and venue for a conference Dorset is the only one fixed at the time of going to press, we'll select the lucky readers from those who have applied and inform them of the relevant details. If anyone can't attend, they'll be shortlisted for a future conference and another selection will be made for someone who can take their place.

Other software houses, with a great string of hits behind them including *AvB*, the *Blind* games, *Spitting Image*, and *Trout Pursuit*. Not only that, but you'll also be meeting the boys from *Imagines* - who in the past have given you games like *Cartoon*, *GAC*, and *Driller*. In particular, you'll be able to check out Castle Warrior, their latest release.

MEET THE BITMAPS

We've also arranged another ACE Conference in London, with Microsoft. In particular this should be a golden opportunity for *Amiga* fans, because the *Amiga* brothers are expected to attend. And, of course, you'll also get the chance to find out more about products from *Cinemaware*, *Imageworks*, *FTL*, and others.

And in very things a bit, we'll also be fixing up an ACE Conference...with *ADI*! This will give readers the opportunity to visit the *ACE* office, chat to all of you here, get a bit in on it, and give their thank opinions on the magazine. Details soon...

KID GLOVES

Somewhere deep in the heart of the Amazonian jungle there beats a drum. Gently at first and then louder, the insistent beating awakens our hero, Kid, from a deep sleep. Last thing he can remember he was putting on an old pair of boxing gloves he'd found in his uncle's study... now, here he is, surrounded by trees and shrieking parrots. There's something weird going on round here. Confused and uncertain, Kid's troubles are just beginning - he's yet to visit strange scenes in the Ice Age, the pyramids of Egypt, the post-apocalyptic West Coast of the 50's and more - but he's still wearing the gloves and with your help he may yet find his way back home!

- Five levels of play
- Collectables on every screen, including food, cash, keys, extra lives and smart bombs
- 4 different weapons to buy as you can afford them, including mega laser and the death star
- Six unique magic spells - use with care!
- Sampled sounds, great graphics and frantic gameplay

Light Years Ahead

ACE NEW WORLDS

PAT WINSTANLEY WITH ALL THE LATEST IN FANTASY LAND

RINGS OF MEDUSA

Every once in a while a game comes along which cannot be classified into a convenient style. This is one of them. The plot centres around you as Prince Orion of Mornean attempting to save the king from the clutches of the evil goddess Medusa who is attempting to control the world with her hell army.

As Medusa is not actually in the country Orion must find five rings which have been scattered around the country, put them together in a temple and force her to battle. Sounds

STARBYTE defines description with its new release

easy enough, but Orion has no army and very little money.

The landscape of Mornean is shown as an overhead view with a small icon indicating your position. Movement is simply a matter of using the mouse to place the cursor where you want to go, then holding the button down. The landscape is beautifully depicted with mountains, forests, marshes, castles and towns looking quite real. Upon entering towns the display changes to a stylized view of the various buildings there (the same view for all the towns), and buildings are entered simply by clicking on them. Inside buildings you are presented with various menus showing all the available options.

Your first task is to make some money in order to pay for the army you will need. There

are several ways this can be done such as gambling in the casinos, attacking caravans, conquering towns and plundering their treasuries, mining for raw materials and finding treasure.

By far the most reliable though is trading which although slow to begin with has the advantage of being easy and more or less under your control. All sorts of items are available for trade such as sheep, books, leather, beer etc. Horses and weapons are always available and each such outfit can carry up to 50 items. The trick is to buy cheap and sell dear which generally means a long trek across country to a distant town. (Assuming you aren't ambushed on the way and robbed of all your possessions you can soon start generating a handsome profit.)

As the game progresses so the state of various towns changes. What begins as a booming commercial centre with a high cost of living may eventually degenerate to a ghost town where prices are low. Also the amount of stock of particular items in a town changes from time to time, so keeping careful records of different prices can be no more than a guide - intuition plays the major part.

Once you have accumulated some money a variety of options are open to you. You can hire scouts and search for possible sources of raw materials then open mines and sell the products in town. Alternatively you might wish to buy a cargo ship and trade with distant lands. Whatever you decide the aim is to accumulate enough money to hire a big enough army to eventually defeat Medusa.

RELEASE BOX		
STAR 87	£29.95	OUT NOW
AMIGA	£29.95	OUT NOW
PC	£29.95	OUT NOW

LANDSCAPE	90
Beautifully detailed graphics and a large playing area enhance the attractiveness of the game.	
EXCLUSIVENESS	75
Enough boring battles between matched armies there is still far too much to be fun.	
CHALLENGE	90
The game world is complex, the good things and it isn't overrated. If you want a game to be your challenge, freedom and economy, this is the one.	
SYSTEM	85
The mouse control could have been rather more precise and useful if the design weren't more reliable.	
ACE RATING 850	

An excellent game which has you living in its world rather than simply playing it in.

Soldiers of various races and fighting styles are recruited in the towns. Each race has its own attributes which makes it more suitable for particular tasks. Thus, elves make good scouts, while gnomes have the correct qualities to make good magicians. The more you recruit the stronger your army will be—and the lighter the payroll. (Pete's economic balance is essential to ensure that your soldiers don't kill you off because you haven't enough money to pay them.)

Once you have accumulated enough wealth to support a large army you can begin attacking towns and castles. The castles, once conquered, can be used to train your soldiers while towns yield the contents of their treasuries and give you the opportunity to collect taxes.

While this is happening you should also be searching for the five rings two of which are found on the main continent, two in the islands and the fifth is hidden among an army which must be defeated. Possession of the rings can then benefit you—rings range from increasing your army's strength by 10% to giving the player information on which goods are produced in

a particular town (and therefore where the prices are lowest).

Throughout the game your actions can influence other events. The banks can be robbed with impunity but they seem to have a central intelligence system so that while a life of plunder may be very profitable at first you'll soon discover that stealing from one branch and depositing it in another is rather futile as once a theft has taken place the establishment will not deal with you again.

Rooping in well with the bank is a must,

you can borrow money but if you don't pay the interest within a set time the local stores will refuse to deal with you.

Working customers is also a little risky. If you attack the same town's caravan repeatedly the town will then refuse to deal with you. If you are attacked yourself there are a number of strategies. Bribery may get you off the hook as might bluffing the enemy. If the worst comes to the worst you'll have to fight it out, but until you have accumulated a fair sized army you'll have no chance of winning. If you lose, all your goods and cash are stolen but you will be left with your wages.

Overall this game is an excellent blend of strategy and role playing. The playing area is large (although much of it seems to be covered by water and it's easy to get lost at one despite having a constant display of latitude and longitude), options are broad and each is well detailed and flexible, and the scope of gameplay is vast. With such a lot to think about it will take many hours to complete but the difficulties you face increase slowly in conjunction with your increasing strength and powers.

DEMON'S TOMB

With Level 9 having pulled out of the text/graphics market it's good to see Melbourn House weighing in with a contribution. *Demon's Tomb* is set in rural England where a Edward Lynton, scholar of ancient Egyptology dies in a fire while exploring a burial tomb. His son Richard then sets out to find his father, only to discover a greater mystery.

The game begins with a prologue in which you control Edward who has only a few moves before being overtaken by the fire in which to preserve his belongings. (These coming after two most final survivors items saved if they are to solve the mystery.)

After Lynton (he, explains, you take control of Richard and his dog Sam. Together they set out to discover the whereabouts and fate of Edward then use those possessions he has managed to save to help solve the riddle of his murder and the more horrifying mystery yet to come.

I always enjoy adventures where interaction with other characters is possible and in this game Sam is a classic example. Not only will he do as he's told (usually) but he will also do his own thing at times (usually the most inconvenient time). For instance, by climbing down a cliff without taking proper precautions, and your canine saviors after you sending you to your death. Mind you, on another slippery slope words like help is invaluable.

Problems are many and varied, not too difficult with a bit of thought and observation and many logical in addition to problems which need solving to progress, there are several background difficulties built in which are prone to have you tearing your hair with frustration. The excessively littered numerous scrollable needs

MELBOURNE HOUSE
goes for text adventuring
in graphic detail

BRIEFING BOX		
ARMY BT	1710000	OUT NOW
ARMCA	1710000	OUT NOW
PC	1710000	OUT NOW

watching if you drop certain of your possessions. Your mobility to progress in certain areas while carrying much weight means and end to the casual "drop off" to which we are so accustomed. Similarly water behaves realistically destroying fragile materials for ever—don't drop your textbook while crossing the flood.

One thing which annoyed me was the proliferation of hints and clues written in to the text as "notes". These often spoil my enjoyment in solving a puzzle by giving me too much help too early. One of the things I like about adventure puzzles (and graphic adventures) is having to think laterally. Being pointed in the right direction rather than instead rather spoils the point. Since the manual contains a list of hints covering most of the problems, I coded in a manner to allow simple access without giving away what you don't want to know the hints in the game seem rather superfluous.

The adventure system itself is quite novel giving you the choice of normal typed input or menus. While in menus, made a list of verbs appears at the bottom of the screen where you simply click on the one you want. In theory this seems a good idea but in practice it is rather unsatisfactory due to the sheer number of verbs listed. Scrolling through is rather tedious and also tends to give away yet more hints by highlighting possibilities you hadn't yet thought of. At one stage you find a piece of charcoal which is used with another object in a particular way. After seeing the relevant verb while scrolling through the menu I solved the problem without thinking.

In addition to the input options a number of other aspects of display can be adjusted to your liking. Screen display can be adjusted to 80, 60 or 80 columns and even two columns of

LANDSCAPE	75
Landscapes are drawn very well, often better than in most titles, but the graphics do provide some other options.	
CHARACTERING	65
The job is mostly done by the most basic computer art and not as strong as what a few have accomplished.	
CHALLENGE	65
The many clues given away in what are full pictures help identify difficult puzzles in the first place.	
SYSTEM	65
Adventure only does well, running in an environment graphics run at the low end of only one demand at individual computers.	

ACE RATING 760

An excellent game for beginners which will also be enjoyable to old hands looking for light relief.

"...always seemed much colder..."

3d are possible. What with options to have the text box or enclosed in a border, status line on or off, menu height etc, you preferences can be accommodated easily. It is even possible to change the on-screen colours to your taste and echo text to the printer.

Graphics are small but well drawn - nothing outstanding but pleasant, more pleasant is that they only come up if you deliberately ask for them. If you aren't accessing the pictures you can play with your saved-game disk in the drive - useful in sections of the game where you are continually dying. A very handy graphic is activated by another function key - it shows a black screen except for a prompt in the top corner which implies you are actually progressing. This also acts as a pause command.

The parser is both friendly and flexible handling some complex inputs well. Multiple command words are generally understood - even some ambiguous ones where the program will prompt you if it gets stuck. Tons "get" on its own will furnish you with a list of available objects from which to choose.

All the usual system commands such as remove, again, undo etc., are included together with various, brief and superior options for more descriptions. All at all the system is excellent in its handling of the game and the flexibility of display available to the player.

I hope this will be a small attempt by the programmers and would like to see further plots (rather more difficult ones perhaps) in the future.

ACE NEW WORLD'ERS

At last - enough space to let you have your say again. Letters this month from Andy Brightmore and David Grant. If you have something to say why not write in to me at the following address: **ACE NEW WORLD'ERS**, Penny Court, 30-32 Farringham Lane, London, SE18 3AB.

THERE'S MORE TO ADVENTURES...

...than beautiful pictures. The main attribute that the game must have are a good game story and a well developed language. A game without graphics leaves more to the imagination and therefore the player can have different ideas about locations. With the CGA I used to buy Level 9 adventures, not because they had the best graphics available for adventures on the Commodore but because the language was

well in advance of what other companies had to offer. Now on the ST with the stunning graphics capabilities I have started to buy adventures by Magnetic Scrolls because they have a combination of good graphics and an easy but detailed language. I also think that in a game where the player is a detailed scripted character (eg. Foul then graphics actually help the flavour of the game. Lastly I think that comedy games are far better than the old serious adventures. I would much rather play Knight Orc or Gold of Thieves than any Dark game which have been exploited to the full and are getting boring and too long to complete. Now what the Zero self-mapping system was introduced this took a lot of the playability out of the games. Couldn't they just have a DOTT0 feature like Knight Orc?

• Larger memory means and more use of disks means adventures can be virtually unlimited in size and complexity but this in turn means

longer development and thus higher costs. Whether or not a text based adventure too graphics should make no difference to the best use of things but too many programmers now rely on graphics to sell a game and playability seems to be getting lost on the way.

TRY THIS PUZZLE...

...what did Level 9 used to do, disks and ways to do, 320 still do tell the way from California but US Gold never do? Answer: Reply to the "Tin snail" letter! What a golden opportunity to get feedback from customers, build mailing lists to read Readers Digest and help you finish their old games so you can buy their new ones and get stuck all over again. They could even discourage piracy by replying only to the registered users, a tried and tested method of protecting business software. I still have my handwritten tips for Adventure Quest, passed by the author himself (Mike Austin of Level 9) as the "By back with a clue" sheet which was enclosed in each game together with the "internal coding guarantee" given for each tape. None of your 90 day limited warranty disclaimers in those days. They even included a stamped addressed envelope to send to them for your clue. Of course the games were great but I could this time (no pen intended or customer service have something to do with their subsequent rise in fame and fortune. I struggled through each new release with their help and kept coming back for more and others must have done the same. What chance of the same treatment nowadays. And Activision/Infocom please note, but books costing more dollars than the game from USA addresses only is no way to do it. Bring back the human touch.

• Couldn't agree more. Trouble is, more distribution means masses of queries which cost money to answer. Perhaps the software houses could set up and finance a joint help service manned by experienced players with access to game programmers/authors. There again you

NO PROBLEM

DEAR, YOU - GETTING STARTED

Get the coat and gun then feed the door maid "gravel" and go in. Take the ball from the disk and the key from the wall. Use key then enter locked room and open door. Unlock the door and get everything then go to the cellar. Hit the button on its own to open a secret passage. Go to the cellar and use money in right hand machine until you are. Use left to top floor and open waterbuckled to get by trap. Take left to bottom floor and hit the elevator Go to the bar and enter door to the street.

UNWRITTEN - GETTING STARTED

Get out of the car and open mailbox, now smelt. Examine books in the library to get spell translators. Get the Spider Cider and the Ghost from the store cupboard upstairs. Take

the axe from the staircase. Take the skull from the nightstand in the bedroom and read the book. In the master bedroom use the stick to ward off evil. Read the journal then go to the lounge and get a key from the chair which will open the cabinet in the master bedroom. Take the box then go to the downstairs hallway where opening any door will bring the skeleton battle who can be disposed of with the Ghost.

LEONARD SAINT LARRY DOES LOOKING FOR LOVE IN SEVERAL WRONG PLACES

The following tips should help on the on-line ship: Go to room and take fruit. Go next door and come back immediately. Return next door, open nightstand and take sewing kit. Go to bar and take up. Go to room and change into swimwear. Go to pool and rub sunscreen on body. Lie on chair lounge. Enter pool and dive under and take token up. Go to barbers and sit down (get wig). Go to captain and pull the

lower behind him. Go to Mafcoot and jump in and wait for it to lower. Wear sunscreen, eat the and wear your R2AP. On the island head in to the underground.

MANHUNTER NEW YORK

Day 2: Investigate explosion at Bellevue Hospital. Access Mad and take suspect's move items. At Bellevue, examine corpse for identity. Access Mad for more info. Go to Trinity and investigate left side of church. Go to the bar and play billiards with bartender. Play video game. The game involves negotiating a maze where at several points you land on red squares and run past three balls at three rows of keypad dials. If successful the game flashes a screen depicting a further. The game's package contains a map of the maze. Make note of the keypad dials which are discolored by the squares which cannot be avoided when progressing through the maze (there are three of them). Go to ladies la in Prospect Park and go to east terrace. Sit and wait three times - wood!

CHASE STRIKES BACK

When using the circle save your position as close as possible to the problem for specific help.

BOSS - PART ONE

Don't worry about the knives from the wall - collect them to throw past the moving force field (only timing needed) to operate the pressure pads. The lights behind the wooden door are easily defeated by approaching from the other side and dropping them down TARD jobs - the pit on the floor below is directly under the one above. In the corridor with pit and gain stand with back to pit in van force field. Then dagger at head to pass through gate. Barriers remove blocks from track to move wall. Up again, fall strength fireballs - lots of them - before removing gate - then back to the closed door which should now open. Up again - turn left then keep moving forward, stepping around pit. You'll be open so watch your compass - about four times keep moving forward. On entering open room your final exit is in the center of the far side. Follow the corridor to find the three Demons.

BOSS - PART ONE

From the maze with streamers go through door and bear left just the pit which generates towers of red monsters. Up the stairs. All the cells with mummies. Up again - simply keep walking straight on across the large open area. Cross the room with poison balls to gain

access to the Statistical Demons. These two routes should help you explore more of the game but there's plenty to do along the way which you can discover for yourself!

DUNGEON MASTER

A healthy bit for those wanting to increase their skills ready for Chess Wizard - if you have the handbook use MPOKE repeatedly. First - keep making potions. Next - find as many objects as possible then throw them back and forth along a corridor. Fighter - use any weapon repeatedly - run this or if you like. Level 12 - Knight - you don't need to complete this level. Once you have found the Ka key and assuming you already have two, go to level 7 and collect the winged key then the long staircase which takes you to level 14. Deal with the dragon (or dodge) then up to level 12 for the murder key which is needed to access the forest. Then advance your steps to level 7. Long winged magic ball it sends over two thirds of level 12.

FISH - THE JAGGED WARP

Put foot on the go south. Move backward then take torch. Turn on torch then go outside. At the abbey take pass, turn off torch then north twice. Open cave then go down and make table. Move left then down for cord and back to pass. Stand on pass and climb up. The cord is purple. Then then pull cord, side cord, take purple then down. Put lid in doorway then go down. Put purple in hole, take shadow and look inside. Lid greened and seal the hole in attack.

SPACE QUEST II

Can't cross the river? Climb the tree - when it snaps press right arrow key to crawl across. Can't escape from the hunter's cage? Call hunter twice, throw the cootie then get key and unlock door. Can't climb down the chandelier? Tie rope to log then climb down. Then swing rope and jump. Little pink creatures won't open the stone door? Type 'word'. Can't find a light source in the caves of the alien squid? Hold the gem in your teeth. Can't reach the landing platform? Blow whistle in clearing to get something to clear your way. Getting fired by jet on the asteroid base? Attack plunger to barrier.

SPACE TALK II

Try to get a barbarian as a special monster so he does a lot of damage. Get a robot with a durability of 18 and make him a monk. He will usually get first hit. To gain experience fast, get a team, go south and fight worms. Go back to guild, save then shoot, reload team and repeat. Each time you'll gain 254 experience. D.Cid has a team of his which does 40-50 damage. The Reaver board is the second house on Thompson Street. High level (4) parables and scenarios get double hits. Dungeon 1 is in the Sacred land. Develop a level 2 (level 2 spelled computer fast)

SPACE TALK II

The tanks. Only have six members in your group. Use old warrior to group. Poison all but the old warrior by drinking water from the fountain. All have giant. One torch to old warrior then put him at front of group and poison him. Then go back to entrance.

BEYOND JOURN

Pick up every scroll and stick/wand/stave you

find. Go to the magic shop and ask the old woman about their uses. Sell Blackbird and Fireworks - both scrolls. Sell various objects - book, crown, jewel, doubloon. To use the spells - point sticks and say spell words.

CHARACTERBANK

The Chateau - 1922 80 Hall - Last bit of ore, pick up punch card. Study - Pick up orange sphere. Hall - Use sphere on top of fountain. Landing - Look at feet of statue, get golden key, use on barista, look at open shelves, get mother gloves, look at right hand corner of rug, get (purple) ball. Father's - Look under bed, get grapple and rope, look at pillars and get parchment. Bedroom - Push drawer, look at combination. Kitchen - Look in bottom left cupboard, use combination on safe, drop combination and get lighter. Get bottle and drop wine. Hall - RE then light lighter. Stairs - up, east. Chapel - Look left of photo, get candles, light candles and extinguish lighter. Look at book and get parchment. Library - Drop photo, letter and bottle. Look mirror, push switch. Hall - Get sphere then drop it. Library - push sphere in desk, look then get letters and sleep candle. Machine - Push lever up, use focus on lever hole, push lever down, go up, push switch, use punch-card in slot.

GARD OF THIEVES

How do I get out of the boat? Jump west. How do I get into the castle? Help me in the arena. How do I get on the rat race? Bet on the grey rat when the race is in the courtyard with rats from confusion in drawing room. How do I calculate the boat? Fish in the moat with a rod made from you, cooties, needles and maggots. Put pin into the fish. Why can't I open the safe? Because it is a red herring! How do I get into the safe cellar? On the stairs, pull the pipe, open stopcock, wait then close stopcock. What do I do in the safe? Another red herring. What do I do with the caudron? Put an eye, heart, skin, berries, and candy in it then open pygmy. What can I do with the bellard baby? Open the red ball and look inside it. How do I get into the mill? Shout "Stop the mill". How do I buy the safe? With your winnings on the rat race. How do I stop the late from breaking? Put it in the bag. How do I climb the slippery slope? Wear gloves in temple garden.

BERNARD JONES AND THE LAST CRABRAB

At the university: Enter your office after taking your way through the student. Take all the junk mail then the package and signs it. Leave through the window. After meeting Demons go to Henry's house and take the painting then go to Venice, in Venice. At the restaurant look at the wine bottle then take it. Enter the library. Take the little lamp in the bookshelf which is not completely fixed (you'll have to search for the correct shelf). At the stained glass window look at the Small Diary. Note the picture of the window that is drawn in the diary and the statement (first on the right etc.) Press enter and leave the area. Search the place for the metal point and then take it (the red corner comes out). Search the library for the stained glass window that matches the one in the diary. Look at the pillar corresponding to the statement in the diary, either left or right. Using the pen, open the slab represented by the inscription on the pillar. Click in to enter the sewers.

OUT OF THE SHADOW

AGE SHOWCASES CARL CROPLEY'S COMPUTER GRAPHICS...

Back in 1993, Carl Cropley had a very tough decision before him: should he become a computer graphics artist or start a career as a qualified refrigeration engineer? Fortunately Cropley opted for art, designing graphics for such computer games as *Redneck*, *Flash*, *The Mystery of Arkham Manor*, *Brian Clough's Football Fixtures*, *Colossus*, *Tom Clancy's Command*, *Blade Runner*. (More recently he's worked on *Demons' Tomb*, *Impulsion* and *Hound of Shadow*.)

"When starting the graphics for any game I usually research the project - referring to literary books, taking photographs and producing rough sketches. In the case of *Hound of Shadow*, the idea to produce all the pictures in video format came from a discussion I had with Chris Elliot and Richard Edwards, the creators of the game. I began to research the 1930s and visited the locations in London that Chris and Richard had specifically requested appear in the game. I then produced my initial roughs before producing the final screen versions. The 16 shades of brown used to produce the video effect gave me the scope to produce more realistic images."

Cropley uses a 286 Alpha 1000 and Electronic Arts' Deluxe Paint II and Deluxe Video II to produce his graphics.

"All my pictures start out as simple filled line drawings. Using the shade, blend, smooth and clone functions of *Deluxe Paint II*, I can then add shadows, highlights and textures. One screen I'm particularly pleased with is 'The Reading Room Desk in the British Museum' in *Hound of Shadow*. The lights used in this room during the 1930s were single light bulbs rather than the more modern fluorescent strips used today. This meant I had to completely recreate the way the light would have fallen in the 1930s. This, together with the perspective in which the desks appear and the spines of a shelf, created quite a challenge to my abilities."

Cropley is currently working on the static and animated graphics for a *Dragon's Lair* style game, "It's a big lot of tools. Don Bluth and Chuck Jones". As for the future, Cropley believes: "artists and animators have been limited for quite a long time but with the advent of CD technology, games designers will have to become interactive storytellers - games will become more like *cinematé*."

In the meantime, Cropley would be pleased to hear from anyone who needs the talents of an experienced computer graphics artist. Write to: Carl Cropley, 111, Saurin Avenue, Belsize, Nottingham NG6 6GL.

NOW IT'S YOUR CHANCE

Are you a talented computer graphics artist? Do you want to give your work international exposure? Are you looking for a lucrative contract with a games software company? M2 will try to help you achieve these ambitions, and more... 200 hard examples of your work, with a brief description of yourself and how you design computer graphics, and you may just see your talent on display in a future issue of the magazine.

Send to: M2 ART, Entry-Cover, 35-37 Parncliffe Lane, London EC1R 6BU

TRICKS 'N' TACTICS

THE ROUGHEST & TOUGHEST CRACKED BY ACE READERS

SPACE ACE

The Complete Solution

Don Butler's rather pricey, but very pretty interactive cartoon is fortunately not quite as frustrating as Dragon's Lair owing to a very useful **Shift** option. The complete solution will, however, undoubtedly prove useful to those still meeting rather sticky ends. It has been compiled from the solutions sent in by **Daniel Williams of London**, and **Chris West of Egham, Surrey**.

Scene 1: solution is in the manual.
Scene 2: When Dexter appears move **right** to avoid the first stomping arm. Once the arm goes up, move **left**. When the third crack appears in the ground, move **left**, wait for the second stomping arm to go up then move **left**.

Scene 3: When all three space ships come close to Dexter, move **down**. When he reaches the rock, move **up**.

Scene 4: When the spaceship starts landing down towards the station, move **up**.

Scene 5: When the truck monster appears, press **fire**.

Scene 6: Wait for the arm to go down, then up, then move **right**, and quickly **up**.

Scene 7: Wait for the platform to come up for the second time, then move **right**. When Dexter lands on the platform, move **right** again.

Scene 8: When Dexter appears on

The path move **down**, quickly followed **right**.

Scene 9: Just before Dexter reaches the corner in the path, move **down**, then quickly move **left**.

Scene 10: When Dexter is grabbed by the monster's tentacles, press **fire**.

Scene 11: When the right-hand monster drops below the bridge then move **up**.

Scene 12: As soon as the dog jumps, move **up**.

Scene 13: When Dexter stops running, move **right**.

Scene 14: When Dexter stops running, move **up**.

Scene 15: When the robots begin to move their arms quickly, move **right**.

Scene 16: When Ace approaches the corner in the corridor, move **left**.

Scene 17: When Ace reaches the centre of the floor, move **left**.

Scene 18: When Ace is approaching the corner in the corridor, move **right**.

Scene 19: Just before Dexter reaches the ladder, move **up**.

Scene 20: When Bert's staff is in motion, press **fire**.

Scene 21: As above.

Scene 22: When Ace picks up the staff, press **fire**. When Bert's staff is in motion, move **left** or **right**.

Scene 23: As soon as the scene begins, press **fire**. When Bert begins his round house kick,

move **down**.
Scene 24: When Bert's staff is in motion, press **fire**.

Scene 25: When Bert swings his staff, move **up**. When he swings again, move **down**.

Scene 26: When Bert swings, move **left**. When Ace is behind Bert, move **down**.

Scene 27: When Bert's goats approach, move **up**. When the screen changes, move **left**.

Scene 28: When Ace is over the platform, move **down**.

Scene 29: Just as the platform is about to hit the bus, move **right**.

Scene 30: When you see the rig, move **right**.

Scene 31: When Ace reaches the corner of the corridor, move **left**.

Scene 32: When Ace reaches the perpendicular mirror, move **right**.

Scene 33: When the ray hits the ground, move **left**, then immediately **right**.

All being well, you have now completed the game.

THE DUNGEON MASTER GUIDE

Part Three

A guide to help you through each level of the Dungeon.

Locations of monsters have been omitted to leave some surprise.

Level One

All 24 characters must have been chosen. By clicking on one the inventory will be displayed along with the option to resummon or reincarnate.

Resummoning a character will return him/her to life, but without previous attributes.

Reincarnating a character will return him/her to life, but without previous attributes.

A fire storm can be found before going to level 2.

Level Two

Items to be found: 3 Fabrics, 2

Bags, 1 Arrow, 3 Throwing Stars, 2 Small Rocks, 3 Boulder Shells, 2 War Magic Bombs, 1 Copper Coin, 4 Torches, 5 Flasks, 2 Charms, 2 Yn Potions, 1 Diamond, 2 Pairs of Leather Boots, 1 pair of Leather Trousers, 1 pair of Gilt Trousers, Humesoot Caps.

Small details can help your search! - Press button on wall for a fabric.

Two pressure pads in room with gate - step on first pad, then one step right, then forward, one left, and out.

Large room with gate and 9 pressure pads - forward 3 steps, back one, forward 2 steps, back 1, forward and out.

Pressure pad with rock lying nearby - place rock on pad to open gate.

'Step inside, take a risk' - step into transporter and search

DM GUIDE

Some useful additions

Here are some additions to the *Dungeon Master* guide provided by fellow fan, **Matthew Hill of Brighton, Sussex**.

- ED0026 - Adds 1 to Mana
- ED0027 BLADE - is found on Level 7 (NOT 11)
- ED0028, ROCKS - are also found on Level 8
- ED0029, BOMBS - are only found on Levels 7, 8, 9, 10, 11, 12
- ED0030 - adds 1 to Mana
- ED0031 SHIRT - 1 to all levels, 4 Bloodst, Speedwalk, 8 Fireshield
- ED0032 SHIRT - POWER SHIRT - +2 to all levels, 8 Fire
- ED0033 SHIRT - SHIRT - produces varying strengths of fireball, poison ball and spirit ball (YES, YES)
- ED0034 SHIRT - should be spell SHIRT
- ED0035 SHIRT - should be spell SHIRT - has LIGHT spell, not Fireball
- ED0036 SHIRT - 4 Mana not +7
- ED0037 SHIRT - Found on levels 8 - 12, not 6 - 8
- ED0038 SHIRT - Start of Mana only have limited changes
- ED0039, PENDANT - is called PENDANT SHIRT, Level 8
- ED0040 SHIRT - enhances physical skills
- ED0041 SHIRT - enhances mental skills
- ED0042 SHIRT - enhances character protection
- ED0043 SHIRT - should be SHIRT, which adds 15 to Anti Magic
- ED0044 SHIRT - also an 'ancient' is one of the robes on Level 8
- ED0045 SHIRT - doesn't and higher water elemental, but also water, spiders, winged snakes, trolls, blue trolls, rust monsters, beholders, wizards, ghouls, etc. - not all monsters, however.

Do not enter transporter saying 'No, No, No!', you will end up back on Level 5.

Towards the end of the level is a passage with a lever at one end and a gate and transporter at the other. Ignore the transporter - it only takes you to an earlier part of the level. To enter the room you must press the lever and move quickly to the gate and enter before it closes.

Level Seven

Items to be found: the Firestaff, Soft Blade, Runedown, crown of Huma, the transporter, 100, bombs, 100 poison, sceptre of life, Gem of Ages, Runedown, Dragon spit, Sceptre of Speed, 2 Green Magic Boxes, 4 Flasks, Water Flask, Orange gem, Carbuncle, Majordomo, Kink, Ka Key, Winged key, Turquoise Key.

Although all the following information guides you through level 7, (on first entering the level you can only open one gate with a Ka Key). The other three Ka Keys and other keys must be obtained from lower levels.

The 'Sceptre of the Firestaff' - after passing through the first 3 doors that require Ka Keys, you will come across 4 rooms on the right. Only one of these can be opened with the turquoise key that you will find in this level. A list of items to be found within these rooms will given in an earlier part of this guide.

'Ganger, Enter with caution' - First you will find a door that may prove rewarding. As you turn right along a long corridor with short passages on the right, a button will be found on the left wall (there are 4 half passages along). Press the button to open a passage on your return journey.

In the room at the end of corridor will be found a Turquoise Key under some ashes. To the left is a button that opens a passage at the end of which are some crystals and a Ka Key.

On your return to the room with the ashes you will find a passage has opened in front of you. Enter, turn left, right, left and your path forward. To find a button on your left, press the button and walk back the way you came to find the winged key has been revealed. Travel down the corridor, it is a direct route to level 12. Open gate and return.

Return to the Ganger, Enter with caution! door. Opposite is another corridor at the end of which are some very useful items. Leave this corridor and open the door on your left with the Ka Key. Walk along the corridor for some distance taking many turns to find the Ka Key. Don't hang around

when you find the Firestaff! You can reach the Power Gem from Level 14.

Buty Key opens Enter with caution! door.

Master Key opens door to retrieve Firestaff.

Level Eight

Items to be found: Softa, Rabbit's Foot, 4 100, bombs, 2 Cheats, Map of Order, Staff of Mana, Fire Staff, Throwing star, Green Magic Box, Jewel Symbol, Torch, Copper Coin.

Level 8 consists of a very large room with a number of secret passages, also numerous pits.

Around the wall you will find a short corridor with a chest and two holes in the wall. The holes for buttons which pass through various blue doors and travel around the room. At the start of this passage you will find a button on the wall. Press it to open a secret panel behind the blue face on your right, press the green button behind this panel to switch off the flames and thus stop the fireball from hitting you as you search the level. If you stand with your back to the central tower and walk towards you come to the end of a wall. Step around the fire in the other side and take a further 10 steps forward to find a key in front of you.

One of the buttons around the wall will reveal a series of passages culminating in what seems to be an endless passage. In effect you are being transported back to the start of the passage. Stand with your back to the beginning and take 26 paces forward, then turn right and wait for a moment for a panel to open. You will find a gate behind which is a button on the left wall. Press to open a secret room.

One passage you find will end in a gate (you should have a gold key on you to open it). At the end of the passage you will find a skull on the wall. Use the skeleton key that you found in the chest to open a secret panel. You will find a number of these in the levels to come. Always open them to reveal access to the master staircase which begins on Level 8 and finishes on Level 14, opening in at the stairs at entrance.

If you drop down one of the pits in the room you will find a series of corridors, search them to find another pit at the bottom of which is a Fire Staff.

Well, that lot should keep you happy for some time. In the final instalment, next month, levels 9 to 14 get a similar treatment.

SUPER HACK

Minden Harbor, Mark Lawrence of Bealton, Essex, has provided some solid for Briggs, many being shot the pieces in Oban.

Thunderbolt: This gives you instructions. Hit the program below in Amiga Basic and save it for future use. Now insert Operation Thunderbolt disk I, in drive 0 and if an alert comes up click on cancel to remove it. Now run the program and after a few seconds the screen should go black. Operation Thunderbolt will now load as usual but you should have noticed the 'No'.

Abstract

[illegible]

FOR THE 14 YEARS SINCE THE 1974-75 season, when the first epidemic occurred, the 1988-89 outbreak represents the highest number of cases since 1974-75. The 1988-89 outbreak is the first to occur in the United States since 1974-75.

1999, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024, 2025, 2026, 2027, 2028, 2029, 2030, 2031, 2032, 2033, 2034, 2035, 2036, 2037, 2038, 2039, 2040, 2041, 2042, 2043, 2044, 2045, 2046, 2047, 2048, 2049, 2050, 2051, 2052, 2053, 2054, 2055, 2056, 2057, 2058, 2059, 2060, 2061, 2062, 2063, 2064, 2065, 2066, 2067, 2068, 2069, 2070, 2071, 2072, 2073, 2074, 2075, 2076, 2077, 2078, 2079, 2080, 2081, 2082, 2083, 2084, 2085, 2086, 2087, 2088, 2089, 2090, 2091, 2092, 2093, 2094, 2095, 2096, 2097, 2098, 2099, 2100, 2101, 2102, 2103, 2104, 2105, 2106, 2107, 2108, 2109, 2110, 2111, 2112, 2113, 2114, 2115, 2116, 2117, 2118, 2119, 2120, 2121, 2122, 2123, 2124, 2125, 2126, 2127, 2128, 2129, 2130, 2131, 2132, 2133, 2134, 2135, 2136, 2137, 2138, 2139, 2140, 2141, 2142, 2143, 2144, 2145, 2146, 2147, 2148, 2149, 2150, 2151, 2152, 2153, 2154, 2155, 2156, 2157, 2158, 2159, 2160, 2161, 2162, 2163, 2164, 2165, 2166, 2167, 2168, 2169, 2170, 2171, 2172, 2173, 2174, 2175, 2176, 2177, 2178, 2179, 2180, 2181, 2182, 2183, 2184, 2185, 2186, 2187, 2188, 2189, 2190, 2191, 2192, 2193, 2194, 2195, 2196, 2197, 2198, 2199, 2200, 2201, 2202, 2203, 2204, 2205, 2206, 2207, 2208, 2209, 2210, 2211, 2212, 2213, 2214, 2215, 2216, 2217, 2218, 2219, 2220, 2221, 2222, 2223, 2224, 2225, 2226, 2227, 2228, 2229, 2230, 2231, 2232, 2233, 2234, 2235, 2236, 2237, 2238, 2239, 2240, 2241, 2242, 2243, 2244, 2245, 2246, 2247, 2248, 2249, 2250, 2251, 2252, 2253, 2254, 2255, 2256, 2257, 2258, 2259, 2260, 2261, 2262, 2263, 2264, 2265, 2266, 2267, 2268, 2269, 2270, 2271, 2272, 2273, 2274, 2275, 2276, 2277, 2278, 2279, 2280, 2281, 2282, 2283, 2284, 2285, 2286, 2287, 2288, 2289, 2290, 2291, 2292, 2293, 2294, 2295, 2296, 2297, 2298, 2299, 2300, 2301, 2302, 2303, 2304, 2305, 2306, 2307, 2308, 2309, 2310, 2311, 2312, 2313, 2314, 2315, 2316, 2317, 2318, 2319, 2320, 2321, 2322, 2323, 2324, 2325, 2326, 2327, 2328, 2329, 2330, 2331, 2332, 2333, 2334, 2335, 2336, 2337, 2338, 2339, 2340, 2341, 2342, 2343, 2344, 2345, 2346, 2347, 2348, 2349, 2350, 2351, 2352, 2353, 2354, 2355, 2356, 2357, 2358, 2359, 2360, 2361, 2362, 2363, 2364, 2365, 2366, 2367, 2368, 2369, 2370, 2371, 2372, 2373, 2374, 2375, 2376, 2377, 2378, 2379, 2380, 2381, 2382, 2383, 2384, 2385, 2386, 2387, 2388, 2389, 2390, 2391, 2392, 2393, 2394, 2395, 2396, 2397, 2398, 2399, 2400, 2401, 2402, 2403, 2404, 2405, 2406, 2407, 2408, 2409, 2410, 2411, 2412, 2413, 2414, 2415, 2416, 2417, 2418, 2419, 2420, 2421, 2422, 2423, 2424, 2425, 2426, 2427, 2428, 2429, 2430, 2431, 2432, 2433, 2434, 2435, 2436, 2437, 2438, 2439, 2440, 2441, 2442, 2443, 2444, 2445, 2446, 2447, 2448, 2449, 2450, 2451, 2452, 2453, 2454, 2455, 2456, 2457, 2458, 2459, 2460, 2461, 2462, 2463, 2464, 2465, 2466, 2467, 2468, 2469, 2470, 2471, 2472, 2473, 2474, 2475, 2476, 2477, 2478, 2479, 2480, 2481, 2482, 2483, 2484, 2485, 2486, 2487, 2488, 2489, 2490, 2491, 2492, 2493, 2494, 2495, 2496, 2497, 2498, 2499, 2500, 2501, 2502, 2503, 2504, 2505, 2506, 2507, 2508, 2509, 2510, 2511, 2512, 2513, 2514, 2515, 2516, 2517, 2518, 2519, 2520, 2521, 2522, 2523, 2524, 2525, 2526, 2527, 2528, 2529, 2530, 2531, 2532, 2533, 2534, 2535, 2536, 2537, 2538, 2539, 2540, 2541, 2542, 2543, 2544, 2545, 2546, 2547, 2548, 2549, 2550, 2551, 2552, 2553, 2554, 2555, 2556, 2557, 2558, 2559, 2560, 2561, 2562, 2563, 2564, 2565, 2566, 2567, 2568, 2569, 2570, 2571, 2572, 2573, 2574, 2575, 2576, 2577, 2578, 2579, 2580, 2581, 2582, 2583, 2584, 2585, 2586, 2587, 2588, 2589, 2590, 2591, 2592, 2593, 2594, 2595, 2596, 2597, 2598, 2599, 2600, 2601, 2602, 2603, 2604, 2605, 2606, 2607, 2608, 2609, 2610, 2611, 2612, 2613, 2614, 2615, 2616, 2617, 2618, 2619, 2620, 2621, 2622, 2623, 2624, 2625, 2626, 2627, 2628, 2629, 2630, 2631, 2632, 2633, 2634, 2635, 2636, 2637, 2638, 2639, 2640, 2641, 2642, 2643, 2644, 2645, 2646, 2647, 2648, 2649, 2650, 2651, 2652, 2653, 2654, 2655, 2656, 2657, 2658, 2659, 2660, 2661, 2662, 2663, 2664, 2665, 2666, 2667, 2668, 2669, 2670, 2671, 2672, 2673, 2674, 2675, 2676, 2677, 2678, 2679, 2680, 26

FUTURE WARS

The Complete Solution

Well, the animated picture from Dolphin Palace certainly seems to have got adventure addicts worldwide during the months of. We have been getting letters or fax calls a week, here at the A&E office, from thousands of readers asking for help. So, to save your sanity and our ears, here is the complete solution courtesy of Phil Thompson.

TABLE 1

Enter backdoor. Operate lift up button. Operate open windows. Enter

Table 1

Examiner: I jumped up and down. Took
minutes. Now, Examiner MC, show me

get and flag. Operate equipment to get merchandise. Use basket on cart to fill. Use basket on cart to store. Operate right hand door from exit side.

100

Open desk drawer to get paper. Operate keyboard to see typewriter. Make a note of number on typewriter. Examine map. Use red flag on hole. Exit right. Examine keypad. Operate keypad entering number found on typewriter one digit at a time and wait to allow after each one. After final digit go through console.

Abstract

Live paper on site. Operate green button, orange and button and

[illegible]

100

On left, looking on green arrow
side. Use microscope on
micrographs. Examine rays of light
to and around. On left

100

Examine trees by taking to get right. Use ropes on branches. After years and years for rain, take clothes. Do not.

1000

Get round back off handle. Open up larger hole to get coin. Get back to push in beyond off handle. Use coin to turn a crank. Listen to sounds. Get to handle.

[illegible]

Listen to information then leave, taking fence from sleeping guard. Go back to large tree. Use fence to get moth's tail and put it on. Go to lake. Use plastic bag with lake. Go back to castle and put bottom of crown.

Here's an interesting fact to slip out at one of those intimate dinners, where you are trying to impress A.H. Other with your cosmopolitan intellect and vast knowledge of world affairs: "Games have many Wikileaks were sold in America last year?"

How about this then - an estimated 22.5 million units, worth something just over a billion dollars over the country. These are two years for handheld units, however, gone are the days when the tape machine attached to the left was de rigueur, but it does give you some idea, even in a relatively stable market, the kind of demand there is for entertainment on the move.

Once Wikileaks land all the closed became available, a whole new area of personal entertainment was opened up and going to work on the bus became slightly more desirable. These ghetto blasters draped around your right and - Oh - as the toilet bowl from neighbour's Chicago headbangers could be annoying, but that can always be solved by having your own up that little bit louder...

That was the revolution in portable audio, this year comes the evolution in portable video games which is going ramp across the USA like never before. I guess it's true to say that portable video gaming has been with us for years. The first time most of us ever heard of Nintendo, it was probably because we found a Game and Watch tucked away in the depths of the Christmas Stocking. And companies such as Tomytec have been producing larger non-programmable battery-operated games too, it seems like, ever longer.

But this is the year that every player in the \$4 billion dollar videogame market has either got a programmable handheld in the shops or in the final stages of development. The big boys are taking this one very seriously - and you may have to look at the numbers that the Gameboy has been generating to comprehend why.

From nothing to an installed base of one million units, all achieved in the last few months in 1989. In my book, that goes under 5 for Space Invaders.

"We think Gameboy just showed all kinds of its potential in 1989 and we're looking forward to more phenomenal sales in 1990," said Fumio Ueda, Nintendo of America's vice-president of marketing. By that, he means to sell four million more by the end of next year. He's unlikely to be wrong.

And that, the Lyons - technologically wise owner of Gameboy - and reports wonderful things (immense demand?) of its first market in New York from the Christmas season, with a reported 250,000 going out the door.

But poor old Atari. For a brief moment it came claim to be the world's only portable colour game system - a fragile claim that was viciously copied by NEC, producing working model of its own handheld at the recent Las Vegas Show.

The NEC handheld is colour alright, with a full 400x200 pixel TV display and what's more has an instant and rapidly growing software base, as it utilizes existing PC Engines/Turbo Grafx-16 software. That has to be a big plus, although there is still some work in the lab to do on the battery life of the unit which will have to be better than the present three hours in order to be a competitor.

Finally, bubble from its surreal Christmas with the Genesis, there are rumours of a Sega handheld hitting the shelves later this year - again in colour and compatible with, fancy that, Sega Master carts. Is this a bandwagon or is this a primitive transportation device piled high with a lot of musical instruments?

Oh. So which one of these babies is going to win out? There are a number of factors to be taken into

John Cook reports from America where gaming on the move looks set to hammer home Nintendo's domination of the videogame market

That's Handy!

Don't just blather—do your homework, combining demanding your report card!

Nintendo will be spending around \$30 million dollars in advertising the Gameboy and other Nintendo products in the first half of '90. Atari's initial ad spend for the Lynx is \$1 million.

Sonic the Hedgehog on Atari Lynx via Atari's Lynx. (Screenshot from Atari's Lynx.)

Nintendo has been smart in the type of software it is "encouraging" its licensees to produce.

Available in a single, standard design, even with such sophisticated graphics.

At the time, the Game Boy was the only portable game console available.

consideration, but why don't we cut them down to three major areas for consideration: technological sophistication, software base and price.

TECHNOLOGY

I suppose, first must come the Lynx which, when you first get your hands on it, is a very impressive piece of hardware. A superb 160x102 display of 70 colors out of a 4096 palette. Cool. It's Meg (6800) does the house keeping, but there are custom chips in there to give hardware sprite scaling, hardware scrolling plus all the four channel beep sound you could eat. Fast and Low!

An 80 would have been happy with one of these - and the "look cool" factor is the major plus of the machine. A minus factor is the power hungry screen giving a cooked in hours of battery life. That'll be Dana-dell hours, not rechargeable hours, of course. That won't get you across the Atlantic - let alone through US immigration procedures.

A strong second comes the NEC hardware. Its true TV screen has astounding clarity at only three inches across and it's unlikely that anyone will notice the difference that the 16 colors on the display only come from a 142 palette. Its 6802 may not have the sophistication of the Lynx's, but there's enough help for the thing to cope with white sprite intensive games such as *Contra*, although there is, of course, no hardware scaling. Big minus right now - only three hours of battery. It may be lucky to release the thing to Jap. Public, like that, so expect it to at least double before you can get it in the shops.

As the Sega machine is yet to be shown, any conjecture about it is wildly speculative, but let's hope its Master System compatibility if indeed it is a low end capability rather than the thing performing at max output.

But even if it wins, the Gameboy still looks like Mario (128 screen, 4 Mario 180x144 display. A cut down 260, Whomom. State of the technological art in the 80s. But a battery life of thirty hours or so will keep you going all the way to the West Coast by plane, let you have the odd game while you're over there and see you all the way through *Contra* and *Excite* back at Heathrow.

On technology alone, then, it's Atari ahead by half a length, with Nintendo still at the starting gate.

SOFTWARE BASE

No problem here - on a scale of sophistication and availability, the NEC, when it comes out, must surely be streets ahead. There are already 20 titles out there and the same number again are due to hit the shelves in the first half of this year - with familiar titles such as the *TV Sports* series from Cinemascope. Most PC Engine games are impressive graphically and have great playability. In the short to medium term, the soft-

ware base can only grow larger and better.

Again, if the Sega machine is compatible with Master System games, it already has a great number of very solid titles to play in and go. The quality of Master System games is broadly acknowledged to be improving - the recent release of *Golden Axe* being a fine example. Old technology compared to the Lynx though.

The Lynx has the original six games that were programmed for it by Epyx and eight more that it. I don't suppose anyone can deny the impressive display of *Blue Thunder* - an Afterburner clone - it's out performing even on Amiga. But do you want to play *California Games* again?

Atari are bullish about future software development, of course, and certainly has been added to that with the announcement of a link-up with Atari Games/Tengen which should ensure a greatly supply of marketable coin-op originals. Here and now, however, there must still remain a small question mark until we see the software on the shelves.

Again, on by any sophistication standard, the Gameboy must line behind. That iron screen is never going to blow you away. But unexpectedly, the quality of the software that is available for the machine cannot fail to impress. *Adventure of the Gator*, from that of America (for instance, is a partial simulation that has the best ball movement algorithms I've seen on any computer anywhere for the past ten years. When you first yourself tapping the Gameboy in a vain attempt to judge the ball in the right direction, you know that someone, somewhere has done something rather clever.

Nintendo has also been smart in the type of soft-

LOW BUDGET HANDHELS

Game and watches have always been with us - well...

Well, what it seems like anyway, but with the very rapid explosion of the programmed hand held market in the past year, a whole host of non-programmable games have appeared from unlikely sources such as Tamagotchi and *Wario* - one better called *Wario's* NES cartridges.

And know what? They're all completely crap. Forget the Atari approach - and God knows I'm usually the type to eat a grade 6 manually operated lever-throwing device - but these games are universally going for the low, low end of the games market and this is reflected in the poor standard of the quality and sophistication of the games. You don't even get a watch in some of them.

Maybe the time might be worth a look - but other than that, take the advice of a rather disenchanted man.

Don't!

Nintendo handheld (left) with GB* and the Knight Rider*

ware it is "encouraging" its licensors to produce. Smart move: Nintendo one was to bundle Tetris with the thing - the game most likely to appeal to the widest possible audience across the age ranges and across the sexes.

Many other puzzle games are in the works, including a surprisingly playable version of *Bluth's* *Star Wars* arena blasters. *Atari's* being an unlikely example from *Garrett's* and *Classic* invaders: a forthcoming *Runescape* shooter release from *Tate*. But there has been a deliberate approach to pitch much of the software away from the traditional shoot-'em-up brigade and towards older users. The ones that take trains and planes to work. There's only one way to describe this particular can't fail. Strategy.

The Lynx and the NEC pack and pack now, with Sega falling back and Nintendo just breaking into a brisk trot.

PRICING

This is where it all becomes really interesting. How much would you pay for a hand-held machine? You've probably already got a computer or console, remember. This is going to be your secondary device - the one you play on the way to work, in the back row of the classroom, down the corridor, wherever.

Well, expect to see the Gameboy selling in the \$80-\$90 dollar range. *Sony's* QED. Does that sound much to you? A nice birthday present, yes? Something you might get from a well-off granny at Christmas maybe. Cuts for the things - most seem to be going up at around \$20-\$25, that's cheaper than the majority of NES cartridges.

The Lynx - the only other contender yet to make it into the shops. Well, you can double the price of the basic Gameboy unit - say around \$180 dollars. You can pick up a Genesis or NES for that kind of money and surely pull *Atari's* machine well beyond the scope of the impulse buy. *Software?* To you, \$35-\$45 dollars - and a little bit more than the average Nintendo cart. Add to this the fairly running cost in batteries and the Lynx becomes what the marketers like to call a 'premium' machine - not you and me call prices.

The NEC handheld, if anything, is likely to be a little bit higher than the Lynx - but will have the added advantage of being able to be used as a TV set with the addition of a low-cost tuner...which no doubt will be thrown in as part of the deal by particularly sales oriented. Who knows about the Sega, but it can't hope to undercut the Gameboy if anything (that's based not about its technical specs, is true).

The Gameboy suddenly puts on a sport of speed and races up on the inside of the Lynx as the field approaches the 'Winning Post'.

CONCLUSION

So - who wins? The NEC and Sega are bound to have an impact when they come to market, because of the large existing software bases - but here and now,

Remembering Tetris? It's coming back to you. Tetris is a classic from 1985.

In the cold hard reality of the market this is a one horse race...

Nintendo cleans up - again!

One clean, one messy. One is a classic, the other is a classic - the game is classic.

Atari Lynx... the 'goth' word factor is the major plus of the machine.

The don't expect to see more within the next three months for all three.

doesn't the numberline Lynx seem to blow the technological searchlight completely away?

Well, hang on. We have forgotten one small point. Nintendo itself. Let us not forget that in the USA, Nintendo is now a phenomena like you would not believe. By the end of this year it will have an installed base of 26 million NES consoles in American homes. Every one calls it, of course, the Nintendo. And the manufacturers have not missed the opportunity to make large amounts of dough on the back of this.

There's Nintendo installed console, you can enter the slots, cards, pins, dippers, all on the shore and landscape, use the Nintendo crinkly and replace you've been playing Tetris for the past few hours to the Nintendo clock. Even when you turn the telly on, there's a high probability you're here into the Super Mario Bros. Show.

And what does everybody outside the industry call the Gameboy. The New Nintendo. One kiddo goes up to another with this little hand held device (just the right word, says, "Have you seen the new Nintendo?" - the immediate reflex answer is, "What One Now?").

Here's another thing - with an estimated \$2.7 billion dollars in sales generated by the big N and its mates in '89 it's not short of a few bucks when it wants to promote a new product. There's 30 million - yes - 30 million dollars being spent by Nintendo on advertising alone in the first half of 1990. Not all of it is directed towards the Gameboy, but see "Nintendo" that often to the consumer and expect it to probably effect their buying choices even if you bring out a Nintendo board of condoms.

Nintendo expect to sell another four million Gameboys in 1990. *Atari* say they are going to sell one million Lynx machines. It's publicly announced at budget is probably one million dollars. I know who my money is on to succeed.

Sure - the colour revolution in handhelds will come - but until all the major machines have been released (all likely to be around the \$200 mark) strongly suspect that many prospective Lynx buyers will wait and see what the competition all offers. And while they're waiting - what could be better than just one more game of Tetris on the Gameboy.....

In the cold hard reality of the market, this is a one horse race - and I'd put my shirt, pants, T-shirts boxer shorts and anything else that came to hand, on a wager that this is the year that Nintendo cleans up - again.

COIN-OPS

BEAST BUSTING - WHO YA GONNA CALL?

After all the hustle bustle of the ATEI Show last month, it's back down into the arcades - as John Cook gets through large amounts of small change and focuses on that ol' Silver Ball

BEAST BUSTERS

SNK

Regular readers will know that I have a violent dislike of the "moo-on-don" style of game that has become so popular in the last couple of years.

These are electronic shooting galleries, with the player gripping a simulacrum of an automatic weapon and blowing away innocent-chased busy bobbies, young children, cats, etc, all in the name of truth, justice and lower petroleum prices.

Now I know it makes me sound like a bit of a wimp - but while I don't mind giving all kinds of alien beingz guns 'ell, I draw the line at pretending to kill large entities representing real human beings.

Why? Well - cos this for a powerful intellect: Just argument - it's not nice. Shooting alienz is creating a fantasy world to have fun in - putting realistic human beings in that world and then killing the odd fan dead, is starting to impinge on the real world in a rather disturbing manner.

So, as far as I'm concerned, you can trash Op Wolf, Mechanised Attack, Op Thunderbolt and Line of Fire...but I think you could save Beastbusters if you really wanted to.

Beastbusters is the latest release from SNK, and has all the

phantasm we have come to know and love. Guns - three of 'em. Things to mow-mow by the score. But it's the theme that saves Beastbusters from a sorry fate - it's stark horror, straight out of the Full Moon.

The theme of the thing has you takes two others if you liked entering a team where something has gone very wrong - it's full of zombies, werewolves and nasty soundz things. Imagine Southend High street on a Saturday afternoon. And you get to blow them all away - but do they lie down and stay dead? Noo!

Apart from that, it's a bit conventional - you shoot special powersupz for more ammo, grenades, napalm, etc - but the movie theme and the 'fantasy' graphics bring it through.

Having played it through to the end - and it took like 100k, are planning a followup by the way - I can tell you that the surprises keep coming all the way through to the final screens, although you'd have to be phenomenally good, or spend a lot of dosh, to reach them.

It's not trying to make you feel like Rambo and all the time it's obvious it's just a game. Splatterhouse needs Op Wolf! - give it a try.

Incidentally - I played Line of Fire to the end in the same session. I won't waste space describing it... suffice to say it was technically superb...but as a game, a load of rubbish. Oh?

SHADOW DANCER

SEGA

What do you get when you cross One Man and his Dog with Shadow? Shadow Dancer, that's what, where, "The young Ninja battles together with his faithful pet dog."

These terrorists have set time bombs all over the city and you have to - excuse me a moment... get down Shadow... you have to deactivate them.

OK, so it's a jumps, jumps, kicky, kicky clone with a novel twist, but it is very playable and quite challenging. Steep follows you around and when you crouch down and press both the jump and fire buttons at the same time, he leaps forward and starts growling at the front of your nearest opponent.

At this point you have to leap up and give some help, 'cos left to his own devices, Sheep might get hit - where upon he starts to the ruin of a pooch.

He does get back to his full size after a bit, but all he'll do in this state is "Grrrrrrr". As in

Shindo, you can throw Shinken around and have a Ninja Magic smart bomb that kills all known terrorists dead.

Hardly breath-takingly original, but an effort that'll probably appeal to Shindo fans and ring lovers everywhere.

FINAL FIGHT

CAPCOM

What on earth does Capcom think it's doing with the super-hit IP System board? The release before last was UR Squadron - a basic horizontal scroller. Now, and now, we are offered Final Fight - a beat 'em up.

OK, so the sprites are big, but does the world seriously need another one of these? Capcom are definitely suffering from a distinct lack of imagination, despite the fact that they have the hardware to not perform almost every other system in the arcade.

More, bigger and prettier is not always better, less. Anyone with some startlingly original game ideas - send them in to us and we'll pass them on to Capcom. They need 'em!

AMERI DARTS

AMERI CORP

There have been a fair few darts games on some formats, but I can't think of one as new as - until now. And y'know, it's quite a bit.

First you have to choose a type of game, traditional 301 and cricket, plus some technoball where you have to hit flanking sections of the board within a time limit.

You then use a joystick to give force and direction to the throw and press the fire button for the pressure to let go of the dart.

THE SILVER BALL

Book pinball. I love video too, but there is something altogether more sophisticated about leaning on a pinball, trapping the ball on a flapper, surveying the swirling crowds of underlings, then nonchalantly taking the jackpot with a single well placed shot.

The skills involved are slightly different to those used by old ladies and the concentration needed to play well produces a slightly different effect - less intense, slightly more refined. Ring any bells with anybody?

In the US, where the coin-op business is worth about six billion dollars (compared to the two billion generated by the movie last year), almost half of that is generated by pinball.

In France, you can't walk into a city without bumping into a pinball table - and playing off the Champ's Elysee, with a double espresso on one side and a cognac on the other must surely be one of life's more perfect moments.

In the UK, you are lucky if an arcade has a single table...sucker if it's in full working order. Why? Well...it's the Law. Very early pinball tables in the 30's - this was in the pre-hippy days, when the game was a variant of bagatelle - there were payout machines where you could bet where the ball would land. This resulted in the banning of almost all pinballs.

Score is automatic, of course - although that is unlikely to stop some people chucking up on the side of the cabinet, I bet.

The control system does take a bit of getting used to, but after a while you can control the flight of the dart very well and it becomes a lot of fun.

I expect this will find its way into a fair number of pubs - popper for that, particularly if it gets rid of all those appalling Nintendo Play Choice 101's.

despite most seem for amusement only.

Modern games don't payout, of course, but you can win more than your initial bet in credits, so that pinball is firmly classified as a game of chance.

This means you have to have a gaming licence to operate one and also limits the ways that the distributors can sell tables to the arcade operators.

Despite all these problems, there seems to be a growing interest in pinball - largely because of a massive increase in the complexity of the hardware that runs the tables. Large amounts of flashing lights and Megabytes of digitised sound are now the order of the day. More about the mechanics of these new age tables in later issues - but why not roll all and try one of these newer efforts in the meantime.

Italy had a big hit last Fall with a table based on the Elina character - an easy to understand table with well defined goals, such as multiple ramp shots.

It's latest, Mouse' Around, is far more complex in design - although it's still a good bet. My favourite manufacturer, however, is still Williams. This company has been producing great table for a long, long time - with classics such as Cyclone, Comet, Fast...but they've gone back to a simpler playground with Red Cat.

Particularly good for the first timer, if you've not played pinball for some time, by going back and giving this one a go, but don't worry - I won't make you feel, dumb or silly.

ON SALE MARCH 15 - AT ALL MAJOR NEWSAGENTS

Midwest MT-44 is used with MT-40 to turn your strings, drums, programs (even those of the art sort) into short, specially designed MIDI-to-analog converter into real music.

170 sample player and come in families of instruments: pipe organs and harpsichords, Latin percussion, orchestral strings, orchestral wind, etc.

EFFECTS

Contained on the LA side of the back is the effects section which incorporates 30 percussion sounds and an entertaining 33 sound effects. The latter cover a wide range from the sound of cat crashes, punches being thrown, test tubes, thunder, screams, tears, etc., water, etc. The drum sounds aren't too bad either.

The CM44 also has two built-in digital events units which are preset at some values. Each of the two sections has its own menu and, which are quite nice ranging with various room sizes and depths of effect. Unfortunately you will need programming software in order to use them. There are no easy commands to set them up, streams of system exclusive data are needed—that's the heavy end of the MIDI code which needs handwriting, patience and check sum data to even get a response, and you will need two entirely separate routines for each event unit.

SOUNDS GOOD

The range of sounds on offer is excellent. The LA sounds are quite good at imitating instruments, though my own preference is to use them for the more synthesizer type of sounds: lead notes, bass or general background. For realism the PCM department takes an awful lot of beating. It is also considerably quieter than the LA section which has a fair suspicion of how about the beauty on close inspection. I would go for the pianos, chains and large bass department without any hesitation.

Although the CM44 is quite expensive, I doubt whether you could have 14 channels of sound and one percussion channel plus events for less money.

FM MELODY MAKER FROM HYBRID ARTS £69.95

For less than one tenth of the outlay required for the CM44 tone module, ST owners can purchase the FM Melody Maker. Comprising of a plugin card-based controlling software, the package does, a surprising amount for your money. First of all you have a set of 76 Pre-sequenced sounds to use at will in 16 steps in stereo—well, pseudo stereo. FM, by the way, was the method of synthesis pioneered by Yamaha. Secondly, you can write your own songs in step-time and have them accompanied in no less than 16 styles. Thirdly, you have a drum programmer which supports MIDI, and finally there is a real-time sequencer. Its development company, Richard Watts Associates, were responsible for the very successful built-on FM Sound Expander for the CM4 a few lightyears ago.

SEQUENCING

On loading up the program you are presented with the step-time sequencer. As the name implies, step-time sequencing is the process where notes are inserted individually—rather in the manner of a typewriter. All notes are inserted by selecting the correct note value from the lower part of the screen and inserting in the single store in the upper half of the screen. This could be a slight problem if you don't happen to read music. On the other hand you could always copy the music from one of the many books available in any music store. To help you position the note, the name of the note is displayed above and below the store as you move it about. On clicking it into place it will sound and it has a range of four octaves you can choose from. You can perform the same trick for rests also. The spacing of the notes is automatically worked out for you and notes can be tied, although there is no option for joining the tails of notes—'beaming' as it is known in the notation business. I found that you could fool the notation scoring a little without too much effort though. Burn notes can be condemned to the trashcan and you can scroll back and forth through the music either by using the scroll bars on screen or the left and right cursor buttons. Most of the music features bits of Melody Maker are duplicated on the QWERTY keys.

The other part of this section comes when you add the chords. If you are copying from a score this should present few problems as the

range of chords offered is quite wide from the simple straightforward chords to the cyber limits of diminished sevenths and augmented chords. Whenever you want the chord to sound you simply click and it appears above the note or the store in shorthand form: e.g. MA7. The reason for this is that Melody Maker has the ability to accompany your chords in any one of sixteen styles—rather like a single keyboard. Having entered your song—complete with repeat sections, number of beats, per bar and repeat sections—you can then play the whole work back and the accompaniment will chug merrily along with you in the style you have chosen, inserting drum breaks every eight and sixteenth bars for you. Even better is its ability to let you mix the relative volumes—but you can also change the four voices. Click on the mixer icon and not only can you alter their relative volumes but you can also change the voices. You can assign MIDI channels to the voices and select velocity sensing. This I found to be of great advantage as it found that the FM drums were lacking in depth. If you have a split or tone module lying around then plug it in, and expand on the sound already working out of the speakers.

OTHER SECTIONS

The other parts of the program are tightly not integrated with the main part. The drum machine has an excellent grid display that lets you set up to 20 patterns with ease, using not only the internal drums but also several extra MIDI drum voices to which you assign both channel and note number to get the correct drum voice. You set the patterns up, then flip screen pages to find the song page which lets you sequence the patterns in any order you like. Up to thirty of the patterns can be sequenced. It is one of the several MIDI drum programmers I've seen.

Chord number lists is a database, real-time MIDI recorder with a metronome click option, a selection of number of beats in the bar and the number of bars count in. Finally it is more like a pattern than a sequencer. You can edit anything or overwrite although you can save and reload your scribbles. But it works!

Chord number three turns the hardware into a nine-voice expander via an external MIDI keyboard. Each voice can be allocated a separate MIDI channel and there is provision to have only six pitched voices plus five drum sounds. You can beef up the sound considerably thanks to the page which lets you define the voices and afford them up to two octaves up or down. It has a MIDI key option as well and the sounds can respond to velocity. No recording possible here but as an expander it works too!

VERDICT

Although it only uses two operations (an FM mixer) to create sounds, the variety and clarity of them is very good and due to the ability of the internal chip to change one of the operations even faster to give greater time expansion. There is room to improve on the program but it represents excellent value for money. It is a pity that its facilities are not integrated the various components cannot load into one another. FM Melody Maker is fun—it converts your ST into a low-budget single keyboard. It is very easy to use, and the on-screen help pages (in three languages) are most welcome. As an easy-to-use starter music package, FM Melody Maker has very few rivals.

DIY MUSIC STUDIO

HOW WOULD YOU LIKE TO SET UP A COMPLETE SOUND FACTORY AT HOME? JON BATES EXPLAINS HOW.

Most companies are now selling tone modules for home consumption. These keyboardless synthesizers — capable of producing many sounds simultaneously — are, previously the domain of the professional studio or serious pipping musicians with time to spare. Now they are coming down in price and appearing in nice neat stand-alone boxes with rubber feet to fit on your best bit of Occipital or MFI.

KAWAI PHM E299

Top of the list for value has to be the brand new tone module from Kawai, who have been very successful in the synthesizer world with their 'W' series of keyboards and modules. From this they created a series of dirty little field sound keyboards — the 'PH' range. They took a bit of a joke — sort of plastic and semi-represent of a floppy organ. The module version has 200 sounds on board and at least 100 of them are absolutely cracking. They can sound like real instruments — check out the acoustic guitar harmonics — or like the lullaby quite imaginably and there are enough 'spicy' sounds to do the soundtrack for 'Star Trek II'.

SOUND AND RHYTHM

Not only do you get the sounds but you also get 28 built-in rhythms complete with fills and introductions. The percussion sounds can also

a MIDI keyboard/ynth into it — making sure that the MIDI channels match on both pieces of equipment — and play away. The PHm outputs in stereo or mono from the guitar jack sockets on the back, and the overall volume is controlled from the fader on the front. Perhaps a headphone socket on the front might have been a useful — as would a MIDI data light. The latter flashes any time any MIDI data is received by the instrument — very useful when working out who on earth your equipment is talking to, who. Under the LCD display are the movement buttons to take you through all the sounds one by one and the PHm comes with a handy plastic card with a sound list on one side and the basic setup and preservation notes on the other.

MIDI

The internal MIDI functions are most comprehensive: sounds, notes and channel numbers, program changes, velocity and after-touch sensing, pitch bend, modulation, volume, sustain pedal. All these are separately switchable from the front panel. Headers to say you can also transpose, fine tune, and alter the rhythm speed. If you are running the module with a sequencer on your computer you will doubtless want to access sounds on separate channels. This too is possible as the PHm is also a multitrack instrument capable of playing up to four sounds plus the percussion parts simultaneously. To help you set this up there are 30 'Ymcs' contained on an internal table. These set up the instrument in a variety of ways. You can't deviate from the preset forms, but they are pretty comprehensive. The forms include various dual settings, with two voices spread over the whole keyboard, and have several preset detunings and transpositions to various split options. The latter will allow you to have several varieties of sound split into areas of the keyboard and sometimes overlapping. There are three presets for use with sequencers and even an optional chord facility where a chord is played under each note depressed. When used with sequencers there is even the possibility to change part of the preset sound and call up other preset combinations of sounds until the sequence is running.

MISSING IT DROPPING

In use, an producing sound modules, specifically designed for computers, Roland have taken the most steps to make the module suitable for sound modules. It has a lot of 'memory' of a sort, being a sequencer with sample hardware which leads to form a new system. The CR-1 is the digital sequencer of a new type, and is a hardware MIDI master that will run up to 24 MIDI channels. In the sequencing software, steps have been made, pre-set, to allow the relative volume of the MIDI and also on the program left and right. This is a sequencer that allows you to set up a MIDI channel with a sequencer that allows you to set up the relative volume of the MIDI and also on the program left and right. This is a sequencer that allows you to set up a MIDI channel with a sequencer that allows you to set up the relative volume of the MIDI and also on the program left and right.

When used to sample sequencers the CR-1 will set up all the sequencing data and also allow you to set up the relative volume of the MIDI and also on the program left and right. This is a sequencer that allows you to set up a MIDI channel with a sequencer that allows you to set up the relative volume of the MIDI and also on the program left and right. This is a sequencer that allows you to set up a MIDI channel with a sequencer that allows you to set up the relative volume of the MIDI and also on the program left and right.

PROMITS

On the menu side is the fact that you cannot easily drop into any of the voices and alter them drastically to your own requirements. In other words it's basically a preset tone module. Although there is a definite trend towards preset tone modules with less emphasis on the sound creating side — most players tend to either stick with the sounds in the instrument or to alter them off the shelf in the form of memory cards or disks. The other slight issue is that you don't seem to be able to store your favourite combinations for recall later on. Although it's not a problem, the last setup you make, it can't be encouraged, via MIDI, to recall any of your previous setups.

The unit is also quiet. Even stuck through a 200 watt professional recording studio monitor system the background noise was negligible. At the price, the Kawai PHm is an excellent buy.

ROLAND CM-64 E789

As reported in the December issue of ACU, Roland have launched a series of tone modules, specially designed for use with home computers. There are three in the range: the CM-32, which is an LA synthesizer module and sounding very much like their MT-32 module. The CM-32P is a module of sampled sounds. Very much like the U110-track mounted module. The Roland CM-64 is a combined version of the previous two. All three are identical in appearance. On the back there are a pair of stereo/mono guitar jack outputs, MIDI in, out and thru and the power input. On the front there is a power switch, a volume control and a MIDI data light. Since they are designed as preset modules, all the sound sequencing and setup routines are performed by your micro's sequencing software. This is achieved by putting the appropriate program number at the beginning of each MIDI channel used in the music. Changes in sound to each channel are inserted whenever you like. All the tone modules have fixed MIDI channels.

VIEW

The CM-64 is capable of producing a maximum of 64 notes simultaneously, spread across 15 channels of MIDI which can also be run at the same time. The LA section operates on MIDI channels 2 to 8 with drums fixed on channel 10. You can have different sounds on each channel, choosing from the 128 different instrument sounds available. Although is a different box, the LA side of the module is essentially the ever popular MT-32 sound module and is thus compatible with the X2's programming software.

The PCM — that is the sampled sounds — are fixed on channels 11 to 15. Again you can assign a different sound to each part. There are 64 PCM sounds on board, including convincing piano, strings and choir. For an extra 448 you can get hold of one of the PCM cards, which will add an extra 64 voices to the range. These are the same cards that M into the U-

A mighty little, the Kawai PHm is small in dimensions and when in business has more than enough sounds and features.

be accessed on MIDI channel 10 as independent instruments, and if this is not enough for you there are additional percussion instruments on part of the 200 sounds on board. These are sensibly arranged so that by picking one of the preset percussion sounds you will have a two or three split across the keyboard. To make use of complete MIDI compatible the rhythms can be synchronized to either internal or external clock pulses. It would have been nice to have the nifty patterns output in MIDI notes as well.

Like all tone modules it has multiple function buttons on the front panel — via these you can set up the instrument to your requirements. At its most basic level you simply plug

Sound	Speakers on TV
Performance:	It sounds like good sound effects on most games

HARD FACTS - SOFT BELL

Available:	Home computers included
Existing Software Titles:	Very good
Current Releases:	Growing slowly
Genre:	All-round
Prospect:	Continued support ensured, but few machines on the horizon
Software Loading:	Instant

BUY LINES

Best Buy Price:	£169
Second Hand Availability:	N/A
Maintenance:	One year guarantee. Fully serviceable to dealer

SEGA MEGADRIVE

Machine:	Regulation
Package:	Megadrive plus controller and two games
Memory:	768 main + 65536 video

Processor:	68000 + 68010
Price:	£149.95 to be under £200 when it finally appears
Contact:	Vega Electronics 04 787 6030

The selling edge in the console market - at least the one we will be able to buy this year - although the Megadrive is still not officially available, grey importers are buying it the way it is the facts. All sell under other Sega Megadrive still enjoying the official kit version. If you wait, your machine will be the new software - it not, you may find the software will bring up any quality.

GRAPHICS AND SOUND

Resolution:	640x448
Palette:	1,024
Colors:	64
FR:	70
Monitor:	No
Speed:	80
Sound:	Very fast
Speaker Quality:	N/A
MSX:	No

Screen Output:	No
Performance:	100 frames per second is produced by a custom 68010 microcontroller

HARD FACTS - SOFT BELL

Available:	Expected with included controller
Existing Software Titles:	Very few titles
Current Releases:	N/A
Genre:	All-round, can you believe it or not?
Prospect:	Can the console support the processing needs of the machine without generating a recurring concern. Even though the software is expected to be what it is, a good design date should be around 1990
Software Loading:	Instant

BUY LINES

Best Buy Price:	£169, available through grey imports as yet
Second Hand Availability:	N/A
Maintenance:	Watch out, grey imported machines really have any real warranty.

NOTES ON THE SIDE

All prices are correct at time of going to press - but shop around and try for special deals, especially with bundled software or peripherals.

'Spikes' refers to software updates and to really only included for specialist interest: most modern programmers use software updates too often.

Grey machines are available in grey imports - units individually imported by retailers. These machines ought to be avoided until you have experienced warranty problems or more, with some of the latest consoles, software loading problems when the machines finally officially introduced the MSX. This is because Japanese companies frequently engage in their own incompatibilities between machines supplied to different territories.

PRIZE CROSSWORD

APRIL '90

**CLUES ACROSS**

- Game played by Flood and I in Bonzo's House! (8)
- Basic instructions, perhaps (4)
- Person striking poker's enemy in game (8)

THE ACE STOCK MARKET

EVERY MONTH ACE PRINTS ITS OWN GAMES CHARTS. UNLIKE OTHER CHARTS, THEY'RE BASED ON REVIEW MARKS AND NOT ON SALES...SO YOU CAN USE THEM AS A RELIABLE GUIDE TO WHICH GAMES TO BUY. NOT ONLY THAT, BUT IF YOU CAN PREDICT NEXT MONTH'S ENTRIES YOU CAN WIN SOME GREAT PRIZES.

Confess! You're getting good at this! Last month, several people got very close to getting all the entries right - 4/10 is the right order. Check out the prize winners for round two on page 120.

One small point for entrants to round four: the closing date for that round was incorrectly printed as 27th March 1993 (that's the closing

date for this month's round) so we'll do the usual put all entries into a hat and pick out seven winners at random. Sorry about that, everyone, but it's the best way of dealing with the situation. Everything's back to normal this month and we'll take normal care to see it doesn't happen again. Make sure you get your entries for this month in on time...

HOW IT'S EVEN EASIER TO WIN!

Source: only need to fill in your predictions for the top three entries (month chart) and you don't even have to get them all right to stand a chance of winning. The entry form on p. 118, listed winners on p. 120.

THE COMPANY COUNTER

FTL, which has been leading in some statistics reviews for (Share) Software Bank, has managed to hold its own near the top of the Company Counter table.

Style is still doing high on the charts, retained (hardcore) Cat Moon (System 1's) high placing comes from a very small number of highly favourable reviews. 'T' is a Company Counter is based on publishers' performance according to how well featured their titles are by reviewers in all the UK computer magazines. The counter headed 'Rating' is a rating based on actual review scores received during the previous month. -/+ indicates whether this rating has gone up or down from the previous month.

The Share Price tells you how well a company is doing relative to its past performance. Plus, 100 is the 'total' amount if a company's price is over 100,

the firms review are improving anything under 100, and this month's best just went up to previous standards. 100 is also the initial share price given to all

entrants to the Company Counter.

Most 'new entries' are marked with an asterisk (*). In order to earn a Share Price, companies must be releasing games and getting their reviews in the magazines. If they come up with the goods,

Finally, there's the index figure. The average score for all games reviewed this month is printed below; each publisher's index figure shows how well its games have done compared to the average mark. This month's average index of 70.9 is the lowest (but not least) a figure a game can score.

THIS MONTH'S SOFTWARE INDEX RATING: 71.58

	Rating	+/+	Share	Index	Thalion	71.09	100	0.76	Excel	70	100	13.20

Rules

Winners must be named by the closing
date for the round (10/10/88).

No employees of Pinks, or of any company
involved in the production, distribution, or sale
of ACE Magazine are eligible to enter.

Only one entry per household.

The decision of the judges is final and no
corrections or amendments will be accepted.

THE MACHINE COUNTER

AMIGA RATINGS

Star One Player	Micro Style	80.5
Star One Player in Space (Game in Battle Squadron)	Commodore	80.0
Dragon's Breath	Amiga	80.0

Star One Player and Dragon's Breath have been around for several months now, but the Micro Style and Commodore ratings suggest that Battle Squadron is the most popular game in the Amiga Counter.

AMSTRAD CPC RATINGS

Chess 40	Oscom	80.0
Star One Player	Amiga	80.0
Star One Player in Space (Game in Battle Squadron)	Amiga	80.0

Star One Player and Dragon's Breath have been around for several months now, but the Micro Style and Commodore ratings suggest that Battle Squadron is the most popular game in the Amiga Counter.

SPECTRUM RATINGS

Star One Player	Virgin	80.0
Star One Player in Space (Game in Battle Squadron)	Amiga	80.0
Dragon's Breath	Amiga	80.0

The question about Spectrum ratings should be asking: how many games are there? The answer is: 100. The question about the Amiga ratings should be asking: how many games are there? The answer is: 100.

COMMODORE 64 RATINGS

Star One Player	Electronic Arts	80.0
Star One Player in Space (Game in Battle Squadron)	Amiga	80.0
Dragon's Breath	Amiga	80.0

Star One Player and Dragon's Breath have been around for several months now, but the Micro Style and Commodore ratings suggest that Battle Squadron is the most popular game in the Amiga Counter.

PC-COMPATIBLE RATINGS

Star One Player	Electronic Arts	80.0
Star One Player in Space (Game in Battle Squadron)	Amiga	80.0
Dragon's Breath	Amiga	80.0

Star One Player and Dragon's Breath have been around for several months now, but the Micro Style and Commodore ratings suggest that Battle Squadron is the most popular game in the Amiga Counter.

ATARI ST RATINGS

Star One Player	Electronic Arts	80.0
Star One Player in Space (Game in Battle Squadron)	Amiga	80.0
Dragon's Breath	Amiga	80.0

Star One Player and Dragon's Breath have been around for several months now, but the Micro Style and Commodore ratings suggest that Battle Squadron is the most popular game in the Amiga Counter.

THE 16-BIT COUNTER

Star One Player	Electronic Arts	80.0
Star One Player in Space (Game in Battle Squadron)	Amiga	80.0
Dragon's Breath	Amiga	80.0

Star One Player and Dragon's Breath have been around for several months now, but the Micro Style and Commodore ratings suggest that Battle Squadron is the most popular game in the Amiga Counter.

Star One Player and Dragon's Breath have been around for several months now, but the Micro Style and Commodore ratings suggest that Battle Squadron is the most popular game in the Amiga Counter.

THE 8-BIT COUNTER

Star One Player	Electronic Arts	80.0
Star One Player in Space (Game in Battle Squadron)	Amiga	80.0
Dragon's Breath	Amiga	80.0

Star One Player and Dragon's Breath have been around for several months now, but the Micro Style and Commodore ratings suggest that Battle Squadron is the most popular game in the Amiga Counter.

Star One Player and Dragon's Breath have been around for several months now, but the Micro Style and Commodore ratings suggest that Battle Squadron is the most popular game in the Amiga Counter.

THE GAMES YOU HAVE TO HAVE...

SOMETIMES YOU KNOW YOU'VE GOT TO FACE UP TO THE TRUTH. YOUR SOFTWARE COLLECTION IS GETTING YOU DOWN, YOUR DOG'S SICK, YOUR FRIENDS ARE CONVINCED IT WAS YOU THAT LOST THE WINNING POOLS COUPON, YOUR BROTHER HAS DECIDED YOU NEED TO CHANGE YOUR IMAGE, AND YOUR GIRLFRIEND (OR BOYFRIEND) HAS JUST BECOME A MISSIONARY...THERE'S ONLY ONE THING FOR IT...GO OUT AND GET A NEW GAME. AND TO MAKE SURE YOU REALLY SEE THE BRIGHT SIDE, HERE'S A LIST OF GAMES YOU'VE JUST GOT TO ADD TO YOUR COLLECTION.

ARCADE STYLE

Including coin-up conversions. Games with a high fun factor and plenty of addictive action features in this category.

ARKANOID

Imaging ■ Spectrum
£7.95 ■ C64 £8.95
£12.95 ■ Amstrad
£8.95 ■ £14.95 ■
Atari £7. £14.95 ■
Atari £7. £14.95 ■
MSX £8.95 ■ IBM PC
£12.95

Conversion from
Atari's hit game, it
is like the last version
of the classic Breakout.
Simple to control: the
player controls a bar at
the base of the screen,
sliding it left and right.
The object is to keep a
small ball in play, bouncing
it off the bar to
destroy formations of
bricks in the top half of
the screen. Eliminate all
the bricks and move on to
the next of 50 screens.
Extra video features con-
tribute to the addictive
ness. As a faithful coin-up
conversion, Arkanoid
comes out hot, but for a
different slant on the
same theme and some
styling, try Asterix
Impact, which also builds
up the difficulty levels
over gradually.
■ ACE £5.49/£6

BOUNDER

Imaging (Imaging) ■ Spec-
trum £7.95 ■ C64
£8.95 ■ £11.95 ■
Amstrad £8.95
£11.95

A great arcade shooter
emup, and very addictive
too. The guide a ball as it
bounces from one pla-
form to another, fight
about the vertically
scrolling landscape. Land
on marked squares and
you can stay still longer
or gain a mystery bonus.
It's a 3D or 2D one of
the game's many modes,
however, and you'll lose a
life. Bonus: learning the
bars at the end of each
level help vary the pace,
and three tough gaps
really keep you coming
back for more. Bright,
witty graphics, great
music — and it's re-
playable.
■ ACE CLASSIC

BUBBLE BOBBLE

Imaging ■ Spectrum
£7.95 ■ C64 £8.95
£11.95 ■ Amstrad
£8.95 ■ £14.95 ■
Atari £7. £11.95

Probably is the essence
of the two-player coin-up
conversion. You and a
friend play bubble-blowing
adventure, involving
through 300 maze and
platform screens, fighting
off the baddies by encap-
sulating them in your bub-
bles to turn them into
juicy fruit. More frequent
and various bonuses
lead to you reach the
most difficult maze
screens. Unusually
good fun, it's a little on the
crazy side. Can also be
played as one player
against the computer.
■ ACE RATED 88

CONQUEROR

Imaging ■ Amstrad
£14.95 (Amiga and ST
versions under develop-
ment)

Once presented your very
own battlefield, the screen
is a huge combat and plan
your strategy for the cam-
paign. This is a tricky
game to get to grips with,
but if you persevere you'll
find you soon become
mesmerised by the thing.
If you can't get a 100%
Arcade through — target it
■ ACE RATED 88

ELIMINATOR

Imaging ■ Spectrum
£7.95 ■ £11.95 ■
C64 £8.95 £14.95
■ Amstrad £8.95
£11.95 ■ Atari £7.
£11.95 ■ Amiga
£7.95

Graphically wonderful
madness that brings the
John Phillips, which all
test your psychic skills.
out. It's one of those you
driving on the ceiling.
Though it's tough to get
to grips with at first, the
addiction level is so great
you'll keep coming back
for more.
■ ACE RATED 88

EXOLON

Imaging ■ Spectrum
£7.95 ■ C64 £8.95
£11.95 ■ Amstrad
£8.95 £14.95

Graphically superb but
essentially nothing about
emup in which you run,
dash and jump your way
along a planet's surface
blowing away at alien
defences. It gets and a
mode launcher are used
to beat the boss, but if
things are too tough
then you can get an
amusement for extra pro-
tection and fire power.
■ ACE CLASSIC

NEW ZEALAND STORY

Imaging ■ Spectrum
£8.95 ■ C64 £9.95
Amstrad £9.95, ST
£79.95, Amiga £24.95

Although based on the
game in a head to head
with Rainbow Islands, New
Zealand Story is not a
game to be ruled out. It is
immense fun to play (pro-
vides lots of varied action
across many levels. Effec-
tively worth checking out.
■ ACE RATED 87

OIDS

Imaging ■ Atari ST
£79.95

A magnificent Daylight
blast. The Oids are relying
on you to pass them, but
the Boudier isn't going
to let them go without
throwing missiles, rockets
and a number of other
weapons at you. Included
with the program is an
edit facility that allows
you to design your own
planets — great stuff.
■ ACE RATED 88

PITSTOP

Imaging ■ C64 ■ Available
only on Ego Space Inter-
pretation ■ C64 £8.95
£14.95 ■ IBM PC
£24.95

In competition with this
for Games and Summer
Games 20.
Thrilling racing game
where the player is left
into two and you can't
the computer or a friend
lots of different Grand
prix circuits, tyre blow-
outs and of course the al-
ternative pitstop game
guarantee to give you hard
driving and your team a
real racing feel.
■ ACE CLASSIC

POWER-BROME

Imaging ■ Atari ST
£24.95

This superb arcade-style
shooting emup imma-
tion will have you
entranced for months to
come. It may not be the
easiest to get through
but it's well worth
persevering with. You'll be
playing this for months.
■ ACE RATED 88

PURPLE SAT- URN DAY

Imaging ■ Atari ST
£24.95 ■ Amiga
£24.95

A terrific mix of games
that delivers punch both
audio and visual. The com-
pletely good gameplay
ensures you keep play-
ing each new game time
and again. It's a little
tricky to get the hang of,
but master it and you'll be
pleased you persevered.
■ ACE RATED 88

RAINBOW ISLANDS

Imaging ■ Spectrum
£9.95 ■ £14.95, C64
£9.95 ■ £14.95,
Amstrad £9.95
£14.95, ST £24.95,
Amiga £24.95

The sequel to Bubble Bob-
ble is nothing short of fan-
tastic. The graphics and
sound are superb, as is
the gameplay.
One of the best (and
most addictive) conversion

number of cards that are on screen at once. You need to make full use of the mirrors, Nemesis controls and planning and outwitting blocks if you're to achieve your aim. Clear the first screen and you'll only have 75 more to go. Frustrating stuff, that's for sure, but not for the hard-core addict.

• **ACE RATED 900+ BT**

NEBULUS

Amstrad • C64 29.95p
ZX Spectrum 29.95p • Amiga 29.95p

Eight pages in the top of each issue is a list of the top 100 games using the top 100 of platforms, bits and bobs that form the rules. It's a highly original game that strikes a fine balance between frustration and addiction, added to which is the victory scroll. They make it a good-looking, playable version of a game.

• **ACE RATED 940+ C64**

SENTINEL

Amstrad Spectrum 29.95p
C64 29.95p
ZX Spectrum 29.95p • Amiga 29.95p

Stunts and compelling strategy games played over the chequered surface of a board dominated by the Sentinel. Fundamentally you have to attack strategy while trying to stay the Sentinel from attacking yours. Ambush tactics and fast trigger-fingers are both necessary in the very original and large 10,000 potential land-rover game.

• **ACE RATED 900+ AMIGA**

SKULL DOGGY

Amstrad Amiga 29.95p

Buildback claims that completely outdoes the original on this particular machine. Again, his flood-demon-based pouncing dog for diamonds in rivers over a hundred different screens—well a time test for each screen. Shockingly scores of deathly-demon screens to begin with and a choice of five star and six and eight-firing laser-player

option.

• **ACE RATED 900+ BT SPORE**
Amstrad 29.95p • C64 29.95p • Amstrad 29.95p • Spectrum 29.95p

The winning combination of strategy, focused shooting and great graphics make Spore a worthy full presentation—what a longer time to be able to play it up for 29.95.

• **ACE RATED 900+ C64**

TETRIS

Amstrad Spectrum 29.95p • C64 29.95p
ZX Spectrum 29.95p • Amstrad 29.95p • Amiga 29.95p

A fascinating geometrical odyssey, the Russian puzzle falls from the obscure mathematical topic of packing into a full game. One at a time, shapes fall downwards into a rectangular playing area. Left to their own devices they'll pile up until they reach the top of the screen; your task is to guide them down and park them tight so that doesn't happen. Different variants have proved to be rather versatile in their arcade aspects, but the brilliant original still holds them steady. They're well worth a look whatever your machine.

• **ACE RATED 900+ C64**

THINK!

Amstrad 29.95p • C64 29.95p • Amstrad 29.95p • Spectrum 29.95p

Originally released by Amstrad at a low price, but now available for a fraction of that from Freedom. It's a friendly addition game played on a full grid—either one or two players in which you attempt to connect four counters, horizontally, vertically or diagonally.

• **ACE RATED 900+ C64**

TOON

Amstrad Spectrum 29.95p • C64 29.95p • Amstrad 29.95p • Spectrum 29.95p

Extremely busy music game involving the player

controlling two chicks, and collecting music through 25 mazes, which increase in complexity as you progress. Also it later allows full and choices to avoid, often blocking the mazes and just waiting to be played.

SPECIALS

Original works that are simply unclassifiable feature in this section.

ATF

Amstrad Spectrum 29.95p • C64 29.95p
ZX Spectrum 29.95p • Amstrad 29.95p • Amiga 29.95p

Excellent combat-flight simulator that's a bit of a change for Digitastreamers, the simulation specialists. The emphasis is on solid action, the result being a warlike feel.

• **ACE RATED 900+ SPECTRUM**

BARK SIDE

Amstrad 29.95p • C64 29.95p • Amstrad 29.95p • Spectrum 29.95p

The second game using the Freespace program was a spin-off, which was more of an arcade-style game. The 3D graphics are again superb as are the music and graphics.

• **ACE RATED 900+ SPECTRUM**

ELITE

Amstrad 29.95p • C64 29.95p • Amstrad 29.95p • Spectrum 29.95p

One of the best space trading games, Elite set a standard for other computers to follow. One of the best space games in the whole genre, it's a breeding and trading effort at success, several galaxies, with plenty of variety in the game play. You can trade legal goods in intergalactic sales systems, or run the gamut of piracy in the galaxy's danger spots with your hotbed of contraband. Other way

longer your quest to become rich and later risk things that go to 11, but, the profits and 3D console against your smooth sailing, under graphics, the one requires planning to complete successfully.

There's a certain line in your planning, and as you risk as you'll find any others.

• **ACE CLASSIC**

INCREDIBLE SHRINKING SPHERE

Amstrad Spectrum 29.95p • C64 29.95p • Amstrad 29.95p • Spectrum 29.95p

A music maze world where music, size and music combine to provide a unique experience. The game's unique is a vast system of graphics, ranges, items and tempo, items surrounded by total drops and 3D safety nets. Floor switches include life and bridge traps, but the game's in the right order can be harder than it looks.

• **ACE RATED 900+ C64**

M1 TANK PLATOON

Amstrad Spectrum 29.95p

This is a welcome break from flight games that sounds enough detail to keep even the most computer-illiterate happy, and at the same time has a wealth of challenges and combat scenarios that should satisfy the most ardent gamer. A winner.

• **ACE RATED 900**

MAGNETRON

Amstrad Spectrum 29.95p • C64 29.95p • Amstrad 29.95p • Spectrum 29.95p

Graphics and action Steve Turner style. One of the world's best-selling flight simulators. It's a true test of your own skill and knowledge to make your play a little more. The ideal game for the Quaternions team looking for a similar, new challenge.

• **ACE RATED 900+ SPECTRUM**

QUEDDEX

Amstrad Spectrum 29.95p

In this impressively challenging game you must move a mobile ball through ten different screens of mazes, tunnels and obstacles, all within a set time limit. The game game cannot have a hint of added features to make it particularly pleasing; you can carry over scores from the last screen, for example, and there are 10 levels of difficulty.

It's a game you can play in any order you wish. Quiddex graphics and utterly absorbing play.

• **ACE RATED 900+ C64**

SPINDIZZY

Amstrad Spectrum 29.95p • C64 29.95p • Amstrad 29.95p • Spectrum 29.95p

Terminator stuff, your spinning top can knock enemies and obstacles, against a backdrop of the game's unique is a vast system of graphics, ranges, items and tempo, items surrounded by total drops and 3D safety nets.

Floor switches include life and bridge traps, but the game's in the right order can be harder than it looks. A few last guys and a lot of nice features, but the experience is the first.

• **ACE CLASSIC**

STANGLIDER II

Amstrad Spectrum 29.95p • C64 29.95p • Amstrad 29.95p • Spectrum 29.95p

One of the most examples of a game using vector graphics to their full advantage, this is a true test of your own skill and knowledge to make your play a little more.

• **ACE RATED 900+ SPECTRUM**

WIZBALL

Amstrad Spectrum 29.95p • C64 29.95p • Amstrad 29.95p • Spectrum 29.95p

Became a classic and can give the future generations what are often in obtaining the questions and winning the game's unique is a vast system of graphics, ranges, items and tempo, items surrounded by total drops and 3D safety nets.

• **ACE RATED 900+ BT**

STAR TRUCK V

Amstrad Spectrum 29.95p

This is hardly the last interpretation of Star Truck. The game's unique is a vast system of graphics, ranges, items and tempo, items surrounded by total drops and 3D safety nets.

TAU CETS ACADEMY

Amstrad Spectrum 29.95p • C64 29.95p • Amstrad 29.95p • Spectrum 29.95p

Eight simulation/strategy games in one, each with its own unique twist. The game's unique is a vast system of graphics, ranges, items and tempo, items surrounded by total drops and 3D safety nets.

It's a game you can play in any order you wish. Quiddex graphics and utterly absorbing play.

• **ACE CLASSIC**

TOTAL ECLIPSE

Amstrad Spectrum 29.95p • C64 29.95p • Amstrad 29.95p • Spectrum 29.95p

The first game using the Freespace system is a bit of a departure from the first, but it's still an excellent game. In total, it's a game you can play in any order you wish. Quiddex graphics and utterly absorbing play.

• **ACE RATED 900+ SPECTRUM**

WIZBALL

Amstrad Spectrum 29.95p • C64 29.95p • Amstrad 29.95p • Spectrum 29.95p

Became a classic and can give the future generations what are often in obtaining the questions and winning the game's unique is a vast system of graphics, ranges, items and tempo, items surrounded by total drops and 3D safety nets.

• **ACE CLASSIC**

RPG

Role-playing games have exerted an enormous influence on modern game-styles. They combine the atmosphere of text adventures with the action of arcade games and the brain exercise of strategy – but their graphical presentation tends to be weaker than other game genres. Gameplay centres around developing characters by raising their experience and skill levels in conflict with other, computer-controlled nasties. All that – and a quest too...

THE BARD'S TALE II

Electronic Arts, £64 £15.95, Amiga £24.95

The highly successful predecessor to *Bards Tale II*. BT II has the advantage of being slightly easier to learn. The Amiga version features some very nice sampled music (which when you enter a temple and suddenly coloured graphics – and of course, you can update your favourite characters, their attributes and equipment for you in BT II).

• ACE RATED 8/10

THE BARD'S TALE III

Electronic Arts, £64 £14.95

The latest Bard's Tale game offers a number of refinements over its predecessors (all of which are still well worth rating a good look at). First, the graphics are better and more varied. Second, there are ranged combat systems which take careful account of the distance between you and your opponents. Finally, the game's large and representative world is more...

• ACE RATED 8/10

BATTLETECH

Infocom, PC £29.95, £7

BattleTech features some remarkable character sequences, an audio style action, role play and strategy in short a com-

plete story. Transformed scenes bring the opposition and learning the magical, tactical and geographical secrets that will enable you to defeat the forces of evil for under ground. Superb story.

great looking interest, and tough challenges games. • ACE RATED 9/10

WASTELAND

Electronic Arts, £64 £14.95

Charge around irradiated USA-refugee mutant towns and take over in the roleplaying game. The atmosphere may not be as good as the Bard's Tale series of games, but the extra dimension of

strategy leaves the cut, dark and quiet moments of the BT series, very behind. • ACE RATED 9/10

BRAIN GAMES

Fed up with mindless blasting? Want a game that offers you an opponent who's worthy of your skills? Then this is your section...

CHESS MASTER-TEN 2000

Electronic Arts, £64 £9.95, £14.95 • Amiga £24.95 • Atari £7 £24.95 • IBM £24.95

Strongest chess game on the Amiga, with excellent graphics, 3D or 2D-view game, 17 levels of difficulty and all the playing options you could wish for. Plus some fairly hefty search engines.

• ACE CLASSIC

COLOSSUS CHESS 4

CDI, £64 £29.95 • £14.95 • Amiga £29.95 • Atari £29.95 • IBM £29.95

Best bet for IBM machine owners, with a choice of 20 or 30 move, amateur levels of difficulty, and a

myriad options which enable you to play, watch, even against a live computer opponent.

• ACE CLASSIC

COLOSSUS MAH JONG

CDI, £64 £9.95 • £24.95 • Amiga £24.95 • Atari £24.95

Run/Win the oriental game of strategy and chance. A total program and a short manual make this an easy to use and highly entertaining game of software for veterans and novices alike.

• ACE RATED 9/10

INFOGRAVES' BRIDGE

Infocom, £64 £29.95 • Amiga £29.95 • Atari £29.95 • IBM £29.95

Graphical the best of all contract bridge simulations, with logic playing. Cards decked against a suitable green-table background. Play a good game for a computer, which after all, is still short in the imagination and the imagination, and features a wide range of options and leading variations which you can struggle to according to your style.

• ACE CLASSIC

POWERPLAY

Amiga, £64 £9.95 • £24.95 • Amiga £24.95 • Atari £24.95 • IBM £24.95

If you want to try out your general knowledge, we reckon you'd be better off with the original and the biggest contribution of

strategy games and card with the absolutely masterful looking final four suits. Powerplay is a game only very rarely in the way of a final four suits, some of the suits, some of the suits, some of the suits.

SCRABBLE

Electronic Arts, £64 £12.95 • £14.95 • Amiga £24.95 • Atari £24.95 • IBM £24.95

The highly popular word game is included very successfully into the series. And, excellent design, and a surprisingly large number of letters (and it's very hard to find some things looking words in some words) Good enough to give you a good/better/best/words a rough game in the higher levels.

• ACE CLASSIC

WAR GAMES

Fancy yourself as a master of grand strategy, marshalling hordes of troops and sending them off to do battle on your behalf? Look no further than the ACE war games section...

ARMHEN

CDI, Spectrum £9.95, Amiga £9.95, £14.95

One of the oldest quality wargames featured in the series, Armhen was easily the best in the field. It has all the expected attributes, like separate scenarios and one of the toughest computer opponents you could ever want to meet. It thoroughly stands wargames which can be played as one of the old masters.

• ACE RATED 9/10

CONFLICT EUROPE

Infocom, £7.95, £14.95, Amiga £24.95, PC £9.95

The 16 bit progression of *Conflict Europe*. Lots of extra graphical and sound effects. The computer-controlled intelligence was marginally sophisticated but still enough to give a challenging game. The correct balance between strategy and randomised throughout. Great for beginners and veterans alike players.

• ACE RATED 9/10

THEATRE EUROPE

PC, Spectrum £9.95, £14.95 • Amiga £24.95 • Atari £24.95

The perfect game for it let users who go green with envy when they look at *Conflict Europe*. Theatre Europe is the favourite for the excellent 16 bit game. The graphics and sound play are well as sophisticated, but on the whole it's a real look of a game.

• ACE RATED 9/10

UMS

Infocom, £7.95, £14.95, £14.95, Amiga £24.95

Probably the greatest war game to date, UMS uses 3D systems enables the creation of almost any battle in the history. As well as a very sophisticated combat opponents yet. On top of this are add on scenarios and a very real time function (it's hard to say going for now longer, as special purchases).

• ACE RATED 9/10

Approximate level of detail in this role-playing title

FLIGHT SIMULATIONS

How about flying the latest US Stealth Fighter on a mission over Siberia? Or perhaps a quick flight over Hawaii would be more relaxing? Computer flight simulations can fulfill any flight-of-fancy.

BATTLE-MAWNS 1942

Lucasfilm Games/CD-ROM
 ● ST 270 \$95 ● Amiga
 270 \$95 ● PC 270 \$95

A NEW RIVAL OF COMBAT SIMULATIONS COMING: THE FOUR MOST IMPORTANT BATTLE OF THE 1942 (WORLD) WAR, FOR UNUSUAL-INTEREST ACTION FANS ONE HAS EVERYTHING - THE SENSE OF "BOMB" THERE'S TREMENDOUS, THRILLING AND SUPERBLY ASSOCIATE STUFF.

★ ACE RATED

RACING SIMULATIONS

In You can't have too much of a good thing, even if the excitement is liable to give other old flicker a good going over. Racing sims have really come into their own over the past couple of years - and this is where you find out how to get the best of motor racing action - all from the comfort of that armchair in front of your computer....

LOMBARD RAC RALLY

Micro-soft ● ST ● Amiga
 ● PC

Race through many types of terrain, both to mountain and forest, and through many types of weather conditions, such as fog or rain. The game has a nice atmosphere, and though the variety of graphics may be a little low, it's still a game you'd be cheering for a good while.

FERRARI FORMULA ONE

Electronic Arts ● ST
 114 \$95 ● Amiga
 114 \$95 ● PC 114 \$95

It's not the best, but still a game that's very easy

ahead of its time to start with. Take the wheel of a Ferrari One Formula race on some of the most famous racetracks in the world. A true challenge level.

R.W.R.

Micro-soft ● ST 114 \$95
 ● Amiga 114 \$95

The champion in the Best Sports Racing/Formula 1 (RAC), and a superb simulation, this one puts you into the world of performance like racing in more other than the Formula 1 (RAC). Brilliant graphics, brilliant sound, brilliant game.

STUNT CAR RACER

Micro-soft ● Spectrum

114 \$95 ● ST 114 \$95 ● C64
 114 \$95 ● ST 114 \$95 ●
 Amiga 114 \$95 ● PC 114 \$95

This places itself in the annals of computer history as being one of the most amazing spectacles to watch, not alone play, the game is a full-on computer spectacle, with the outside world made up of really fast smooth-flying vehicles, and the impression of real time is unbelievable. An amazing experience, and a clear winner. Where can things go from here?

SUPER HANG ON

Electronic Arts ● Spectrum
 114 \$95 ● C64
 114 \$95 ● ST 114 \$95 ●
 Amiga 114 \$95 ● PC 114 \$95

● Amiga 114 \$95

Not so much a simulation as a perfect arcade conversion of a brilliant live racing. Super Hang-on. Great game, excellent conversion.

THE DUEL - TEST DRIVE II

Amiga ● C64 ● ST ●
 Amiga ● PC ● MNC

Accelerate head to head at the best time with the car, and to an extent they're correct. There's nothing serious about the game. It's not a go-off, it doesn't claim to be technically or visually accurate, but why should it?

THE BOOKS YOU HAVE TO HAVE!

- If you ever find it possible to drag yourself away from your computer and watch the TV instead you might have seen a programme on BBC last month about computer games - those people who just can't get enough of their micros and are quite happy to burn the midnight oil just to be with them. This program suggested that such activities might be actually good if it's true. There's a magazine to provide if it's true. If it's not, it's a waste of time. A good idea, but actually, surely, surely, surely, to have gone with the books you have to have. 1. Doctor Doom's ABC - if you're interested read and play the right place to start if you're new to any of them.
2. The New Line - A program listing on TV. Search book for more advanced readers.
3. Digital and the Blue Car - Probably the best book ever written (well, with pictures) about.
4. Any-Port Book - Any hours you spend with the best of this book are hours well spent. All the philosophy you need for survival is contained here.
5. The Top 100 - All that philosophy explained.

ACE DEALERS

IF YOU GO DOWN TO YOUR STORE TODAY, YOU'RE IN FOR A BIG SURPRISE... ACE DEALERS GIVES YOU THE LOW-DOWN ON ALL THE LATEST BARGAINS, SPECIAL OFFERS, PROMOTIONS, STICKERS, POSTERS, FREEBIES, DEMOS, CANNER BAGS, AND THINGS THAT GO BUMP IN THE NIGHT...

GREAT APRIL BARGAINS

There are printers galore available around the country in the next month or so, to promote various games. If you think your bed-room walls could do with brightening up, wander down to your local independent retailer, where some, if not all, of the following should be available for a change, with the game concerned:

40 FORMATS: 3 Out (Rainbow Art), Space Haven II (Grandstand), Cybernet (Darnack)

PC ONLY: Saturn (Microgroup), Knights of Legend (Microgroup), Space Hopper (Microgroup), Mindhunter (Blind swap)

(Brain Lee Lovers (Blind swap)

FREE MGT BROCHURE

Many retailers are also stocking free brochures to tell you everything you ever wanted to know about the Sam Coupe brand, the new Spectrum compatible machine from MGT. So, if you're interested in the Sam, pick up some literature - again from your friendly local.

MICROBYTE JACKETS

From the end of March there will be Blue Angel baseball jackets and nothing is for sale from selected branches of Microbyte in a competition-organised with Accolade. Prizes will be given away with each Blue Angel purchase, and your

name goes into the draw for the big prizes - there's one jacket to be won per store (see freestanding stores and Microbyte in Gateshead, Bradford, Birmingham and Wakefield).

AND THERE'S MORE...

Microbyte has also launched a special card scheme for its regular customers. You can 'earn' some exciting free gifts through your Microbyte purchases, when you pick up one of the free Collect-a-Point cards.

Every time you buy a product from any branch of Microbyte software shops (see store list below), your card will be stamped in one of the 68 squares on the card. As you fill the squares,

you can choose when to stop and claim your gift - the more squares you've filled, the bigger the prize.

For example, seven stamps gets you a special Microbyte pen. After that there are T-shirts, sweat-shirts, sports bags, baseball caps, software vouchers, and jackets to be claimed.

The Collect-a-Point scheme is operating in all Microbyte stores, and you can join in right away. To get the scheme off to a flying start, the store is offering ACE readers an exclusive headstart. See the voucher below for details.

POT OF GOLD

Gordon is bringing out Rainbow Islands at long last, after the game never made it out of Telecomsoft when the British Telecom division

was sold off to Microprose. The Computer Shop chain is offering you a once-in-a-lifetime opportunity to get your hands on your very own special edition Rainbow Islands pen - with every purchase of the game. What?

You can find Computer Shop outlets in the Arndale Centre, Manchester; Newson in Leeds; Preston, Sunderland, Stockton and Nottingham. Also part of the Computer Shop chain are the two Games Store outlets in Carlisle and Middlesbrough, which stock role-playing games as well as computer software.

There are Microbyte stores in the Arndale Centre, Manchester; the Broadmarsh Centre, Nottingham; Kingsley, Newcastle; the Metro Centre, Gateshead; the Green-

market, Newcastle Upon Tyne; the Kingsgate Centre, Bradford; the Bull Ring Centre, Birmingham; and the County Arcade, Leeds.

THIS IS A PUBLIC WARNING

All offers and prizes from ACE are subject to availability of stock. Although we do our best to ensure our dealer promotion information is accurate at the time of going to press, ACE cannot take any responsibility for changes or cancellations to dealers' plans.

GET IT FOR FREE!

Attention dealer! Don't keep your promotions, competitions, special offers, etc. a secret. Tell us at ACE and we'll tell everybody else.

PRIZE CROSSWORD SOLUTION

PRIZE CROSSWORD SOLUTION FOR FEB '90

The solution of the February Crossword is **Pink Pages**.

Turns of the Crossword please note that a new puzzle appears on page 114.

Meanwhile, to keep at your desktop today, the Pink Pages appears on page 114.

BONUS PUZZLER

I know that a lot of ACE readers enjoy the Crosswords and Puzzles in the Pink Pages (quite naturally of course, as you are all a lot smarter than the rest of us).

One of our most popular puzzles is the crossword. So, to give you a bit of a leg up, we have got a lot of tips in with you on this page. Here is a list of a puzzle for you to ponder. The answer will be printed in the Pink Pages next month.

THE PUZZLE

A short while ago we had a puzzle for you to solve. It was a crossword puzzle. The answer was **Pink Pages**.

Remember for you to solve a crossword puzzle you need to know the answer to the puzzle. So, to give you a bit of a leg up, we have got a lot of tips in with you on this page. Here is a list of a puzzle for you to ponder. The answer will be printed in the Pink Pages next month.

Answer to puzzle is **Pink Pages**. The puzzle was a crossword puzzle. The answer was **Pink Pages**.

Remember for you to solve a crossword puzzle you need to know the answer to the puzzle. So, to give you a bit of a leg up, we have got a lot of tips in with you on this page. Here is a list of a puzzle for you to ponder. The answer will be printed in the Pink Pages next month.

PINK PUZZLE

APRIL '90 PRIZE PUZZLE

Sent by Archie Mailes

Count on the 'Og and Poo die' the usual Saturday afternoon darts match was in progress. Across point in the game a rather unusual score was noted.

Three darts had been thrown and each had scored a 'single', what was unusual was that of the three darts had landed in the red! (Each dartsman from where they actually were, the score would have been the same. (Even more remarkably, the same total would also

have resulted) they all landed on a sector of the board anticlockwise.

For example, if a 20, a 15 and a 9 had been scores totaling 44 the next sectors of the board clockwise are 1, 20, and 12 respectively. These also total 33. However, in this case the anticlockwise scores of 5, 12 and 13 only come to 30 - so this obviously was not the position of the darts in the 'Og and Poo die'.

Can you determine what the score was for each of the three darts? (Remember, there were no doubles or trebles, neither was any 'bull' scored).

To save you darts flying into a hand, a table of a dart board has been provided for your convenience (well it must).

SOLUTION TO JAN '90 PRIZE PUZZLE

The winner was Mr. **Salomon Giddey**, **Giddey**, London.

Answer: In the programme puzzle **A-442** and **B-553**.

Solution: The problem involves finding values for A and B such that the grid can be filled in accordance with the clues given. For example, the second digit of the product A times B must be the same as the fifth digit of the value of A squared. Only if this is the case can the two values fit into the grid and interlock correctly. As both A squared and B squared have six-digit totals, the values of A and B must be

in the range 25 to 100.

These are the lowest values defined in the two FOR/NEXT loops in the program lines 100 to 130. From these two values the remaining three values in the grid are calculated (lines 130, 140, and 150). In each case the numeric variables are calculated are converted to their string equivalents.

Note that some computers introduce an extra space at the beginning of the string formed when using the STR\$ command. For example, the line `for i=25 to 100 step 5: print i` would give the result of 1 and not the expected 6. This is because the string is actually represented as "1" (with a space) and not the expected 6. To get

rid of this simply use the command `trim$(STR$(i))`. So if your computer produces a length of 5 in the above example you will need to use this technique to bring the first digit of the answer into first position of the string. (Values 50-90 go

may result in strange answers, however!)

After each string is created the positions of matching digits are checked. The failure of any match will result in that pair of values being ignored, only if all four are passed in the test printed out at line 210.

```

100 for i=25 to 100 step 5: print i
110 next i
120 for j=25 to 100 step 5: print j
130 next j
140 for k=25 to 100 step 5: print k
150 next k
160 for l=25 to 100 step 5: print l
170 next l
180 for m=25 to 100 step 5: print m
190 next m
200 for n=25 to 100 step 5: print n
210 next n
220 for o=25 to 100 step 5: print o
230 next o

```

THE MIGHTY LEGEND

Ivanhoe

Enter a medieval era in a mystical world where Ivanhoe, our chivalrous hero, pursues a perilous quest ... a quest from which most mortals would run ... an adventure which most men would fear! Strap on your armour, take up your sword and brace yourself to face the magical powers of the most evil of wizards, the plunderous pirates, the most awesome of dragons and a host of hideous 'beings' in this land of legends.

Superb animation, by the cartoonist whose brush gave us the Asterix movie, and beautifully executed graphics create a visual impact as yet unseen in the media of interactive entertainment. Ivanhoe - Fight for your life ... and legend!
