Tiny blood vessels can rupture or block. If this happens in the brain, it can lead to paralysis or coma.

Speed affects everyone differently. It can induce feelings of panic, anxiety and even long-term paranoia.

It will keep you wide awake and can leave you feeling exhausted and badly depressed for days afterwards. Speed doesn’t guarantee you a good time.

Most Speed is only 5% pure amphetamine. The rest could be anything. So you never know exactly what you’re taking or what the risks could be.

Dehydration when dancing on Speed is another danger. To combat this sip about a pint of non-alcoholic liquid an hour to replace lost fluids. Include fruit juices and energy drinks to keep sodium levels up. Remember to chill out.

Your heart rate speeds up. This could cause your heart to beat irregularly. You could collapse. This can occur even in young, healthy people.

NEW LAMPS FOR OLD

Last issue we gave away a smart little book, dedicated to the history of Computer and Video Games. Great timing, what with the buzz for old games filtering through to mainstream news. This genuine excitement reflects how important it is for games developers to acknowledge their heritage. Of course some teams seem to make a rule of doing so – how many Mega Man games can Capcom manage in one lifetime? Maybe this is overdoing it. But the production of endless sequels shoots wide of the mark too. By heritage I mean that element which inspired everyone to go off and make great video games in the first place – before the marketing machine took over.

With so many games out there released month on month it becomes increasingly more difficult to recognise someone’s genius. But I have to remind you that CVG is better equipped than any other magazine to identify the ‘real thing’. This coming year looks very promising in that last respect. Far from being some scavenger for a diamond in the rough, 1997 is practically Aladdin’s cave. Start saving!

THE GAMES YOU BOUGHT IN 1996

We thought you might like to see exactly which games have been turning you on this past year. The information has been kindly supplied by those nogood somes-of-a 12" pizza – Doug and Jazz... – at Oxford Street’s HMV Level One.
Pure magic, enough to make a grown man cry. Every game which hits the High Five is essential. Let there be no doubt, this is deep and vision beyond belief.

Usually the highest we feel confident awarding a game. Ranks among the best in its field, or surpasses us with elements of well implemented originality.

Something you may want to own, as opposed to renting out for a couple of days. Here is a quality, entertaining game to suit most tastes. Good, but not great.

Unlikely to be especially original, or overflowing with exciting features – there are better examples available. Or else this is a clumsy attempt at a new concept.

Almost a flat-liner, its so lifeless. You'll be wanting to exchange this for something else straightaway. Save yourself the bother by avoiding in the first place.

Almost a flat-liner, it's so lifeless. You'll be wanting to exchange this for something else straightaway. Save yourself the bother by avoiding in the first place.

Paul Davies

**Best Game:** Nights!

Technically I should be voting for Mario 64 as that game is a monument, but Sonic Team obviously spent longer practising their house pocus.

**Biggest Shave:** This is a toss between Cheesy the Mouse, and the delay of N64 in the UK. But at least Nintendo are trying to grow the market – not kill it.

**Medal of Honour:** Definitely Sony for establishing the PlayStation as the Number One games system across the world. It's almost scary how it happened!

Ed Lomas

**Best Game:** For me its a close thing between Quake and Nights. One is the best multi-player and most customizable game ever, and the other is a clever, non-stop magical score challenge.

**Biggest Shave:** Some excellent games not selling as well in the UK as we feel they should - Nights, SF Alpha, etc. Plus Sega's marketing of Saturn. They need to sort that out, big time.

**Medal of Honour:** Sony Team for Nights, AM2 for VF3, id Software for Quake, and Sony for being so successful in the games market. Am I allowed to give out that many medals?

Alex Huhtala

**Best Game:** There were so many big games this year, but one game out for good gameplay, and above all originality. Its name is Nights, and it did play like a dream.

**Biggest Shave:** Sega's marketing of the Saturn. They have such an amazing machine. Yet they can't get this message across to the people that Sony have successfully targeted.

**Medal of Honour:** Core for Tomb Raider. Not just a great game, but more impressive for the quality of conversations across the formats. Proof that some software houses really do care!

Mike Newson

**Best Game:** If there's one game this year that stands out it has to be Quake. It has reinforced my passion for corridor Shoot 'em ups and made me sample once again, favourites such as Doom and Hexen.

**Biggest Shave:** Having not played Nights, because of its appalling music which drives me insane and others to an early grave.

**Medal of Honour:** As before, Sony for it's great marketing and publicity strategy. Exciting new games, revitalising classics and keeping its customers on the edge of their seats.

Jaimie Smith

**Best Game:** A close thing between Mario 64 and SF Alpha 2. Both of which deserve the highest recommendation.

**Biggest Shave:** The lack of software available for the N64 at the moment is a great shame, hopefully this will be rectified after the release of the American machine.

**Medal of Honour:** Although PlayStation obviously has the edge over Saturn in terms of sales, Sega deserve respect for the quality of their recent releases and especially their UK conversions (in most cases anyway).

Tom Guise

**Best Game:** For me its a close thing between Quake and Nights. One is the best multi-player and most customizable game ever, and the other is a clever, non-stop magical score challenge.

**Biggest Shave:** Some excellent games not selling as well in the UK as we feel they should - Nights, SF Alpha, etc. Plus Sega's marketing of Saturn. They need to sort that out, big time.

**Medal of Honour:** Although PlayStation obviously has the edge over Saturn in terms of sales, Sega deserve respect for the quality of their recent releases and especially their UK conversions (in most cases anyway).
The first three tantalising screen shots of the Japanese version of Street Fighter III have been released. As you ought to know, Street Fighter III is the second of Capcom’s games to use the new CP-System III board. Though Street Fighter III is still in development, we know already from Red Earth (War-Zard) how advanced the graphical capabilities of CP-System III are, brandishing silky-smooth animations and almost ten times the amount of colours on screen. Street Fighter III, then, should look totally incredible in action. So, a full report GUARANTEED for next issue. The only gameplay details are these: There are three Super Special Moves per character, though only one can be selected. A new blocking action, perhaps similar to an Alpha (Zero) counter, is included – stop an opponent’s move then retaliate with one of your own. The only characters carried over from the original World Warriors are Ryu and Ken, everyone else is new. Here’s a first look at three.

Capcom’s CP-System III. Games transfer from the CD.

Ibuki is a Japanese Schoolgirl Ninja. Alex is an American with a powerful punch.

Dudley is a British Heavyweight boxer – here demonstrating the new block move.

JACKMIX ‘97

If the New Year’s celebrations have put you in a party mood, you might be interested in this novel mix-tinkering package for the PC.

Mixman allows you to mess around with eight different dance tracks, recording your own ‘awesome’ setpiece out of them. Breaking the tunes into 16 separate components, you can blend any of them together, adding and removing the different sounds at will. There’s also a few neat tricks, such as adding breaks or twiddling the pitch. And it sets the timing of the sounds for you, so it never sounds too bad.

The music is pretty good. A blend of garage, techno and ethnic dance stuff from the likes of the Bassbin Twins, Saharafish, Freaky Chakra and Mephisto Odyssey, to name a few. It’s a simple package (not for serious musical types), but Ed and Tom had fun on it (expect their new album this year) And at £20 it’s fairly priced. Also, the Mixman website (http://www.mixman.com/) offers new demo tracks, so you don’t get tired of the old tunes.

BRING OUT YOUR OLD GAMES!

It’s only recently that people have realised videogames aren’t just a passing craze, but in fact a form of entertainment spanning back over 20 years. Something our History of Computer and Video Games book (free with last month’s issue!) showed. Realising this, the British Film Institute wants to create a national videogames archive!

The BFI is urging anyone who can help, to donate old games and machines to this appeal. Around 90% of silent era films are missing, together with much early television, and the BFI don’t want the same thing happening to this newer form of moving image entertainment.

Already they have 2000 games and a selection of machines which are stored in their Berkhamsted Archive, next to 300,000 films and TV programmes. They’re not looking for every game ever made, just a sample of the best in each genre – sports, platform, beat ‘em up etc. Games that also demonstrate crucial advancements in gaming too.

Unfortunately the BFI can’t pay for any games or machines offered, but anyone interested should contact Tony Hetherington at the BFI, 21 Stephen Street, London W1P 2LN. Of course, our own Microgoblin (in his Freeplay cabin) will offer you money for the same stuff. So do you want to make a quick buck or help educate the children of the future about how their ancestors lived? You decide!
PRE-XMAS PLAYSTATION PANIC!

In the run-up to Christmas, European demand for PlayStation has been such that retailers in some countries have been unable to get any more machines from Sony.

As reported in trade newspaper CTW the week prior to Christmas, Sony had no more supplies of their console in Italy, Spain, Benelux or Scandinavia, with Germany and France also suffering shortages. While there’s concern that these countries would have no machines on the shelves during Christmas week, Sony were confident the UK wouldn’t suffer this problem.

CTW also revealed latest PlayStation ship-out figures (to retailers not consumers), 10 million worldwide, with 4.2 million in Japan, 3.45 million in America and 2.35 million in Europe. Next month we hope to bring you an look at the post-Christmas aftermath, seeing how all games systems have fared!

COMMAND AND CONQUER CONQUERS!

Each month seems to bring new record-breaking game sales with it. For a change though it’s not a PlayStation game. Beating recent record breakers Resident Evil and Formula One for the title of UK’s fastest-selling CD game ever, is Command & Conquer: Red Alert with 35,000 units sold on release. £1 sold 30,000 on its first weekend. Expect a new record-breaker next month!

MARIOKART 64 SOLD OUT!

Mario Kart 64 – the most awaited N64 game since the machine was launched with Mario 64 – was finally released on December 14th in Japan, with all copies selling out within three days!

Numbers of the game released equaled sales of the machine in Japan, which means the game was bought by literally every Japanese N64 owner. This puts its initial sales figures at around 350,000!

Such has been the sell-out of this game that we’ve actually had trouble getting our own copies. Having ordered eight copies from our supplier, we’ve so far managed to acquire only three!

The game is retailing in Japan for 9,800 Yen (around £70). This comes in a large square box complete with a special two-tone black-and-grey joy pad. Clearly Nintendo consider the two-player option essential. Importers in the UK are charging £150 for this pack! Yes, we’ve played the game. But seeing as it has only arrived within hours of this issue going to press, we aren’t going to do it a disservice by making any comment in this small space. Big things next month.

A DOUBLE WHAMMY!

If you’re still a faithful Mega Drive gamer seeking classics (something we wholeheartedly approve of), you’ll be pleased to hear that Codemasters have brought out some of their best titles on budget carts!

The Double Hits packs feature two games on one cart, each for only £29.99. The sports cart features Brian Lara Cricket and Pete Sampras Tennis, while the action action cart has Micro Machines and Psycho Pinball. CVG considers both to be an excellent deal. Better still though, is Micro Machines 2 at £20. It’s an all-time classic and you should still play four-player link up now. Yo hear!

WIN NAMCO CALENDARS!

We’re certainly big Namco fans at the moment here at CVG. What with Rage Racer currently taking our office by storm, and Soul Edge and Time Crisis set to appear next month. We have big plans for these and other PlayStation games next issue, but you’ll have to wait till next month to find out what. In the meantime, we’ve got twenty-five snazzy Namco desktop calendars to give away. Each month featuring a smart piece of official Namco art. So the first 25 entries sent to Namco Calendar Comp, at the usual address, can have them!

CLONE AND CONQUER

With Command & Conquer now having justifiably taken the world by storm, we’re bound to see some ‘similar’ games. Krush, Kill ‘N’ Destroy is one such title.

The work of Beam Software (a team from the old Melbourne House label), KND is blatantly inspired by C&C. Only this time it’s set in a post-apocalyptic future, with mutants battling human survivors. Although the style is different (mutants ride spiders and have bone-buildings etc), the resource management and battling is near identical. Electronic Arts are publishing the game over here, and they’re hoping that its lower cost (under £30) will make many potential C&C fans choose this option instead. We’ll review it next month.

SIMC O P T E R  LOAD OF THIS!

Maxi’s latest Sim game, SimCopter, was delayed from its December 13th release, due to a bit of naughty internal vandalism.

It seems one of the programmers decided to respond to the portrayal of women in video games, by putting semi-naked men in the game instead of a brass band.

As such, the game’s release was put back until January 10th while they reprogrammed it.
Time's up! That's it! Pencils down! The end of one of the most popular competitions ever!

Our competition to win a Nintendo 64 with a copy of Mario 64 was started many months ago, and we've already given out two machines as prizes. This month we went through hundreds of entries to pick the third and final winner, as well as some of our other favourites. Thanks to everyone who entered.

Diamond Mario can change into dinosaurs. While you may not think it's anything special, the picture's been on our wall for months and we smile whenever we look at it. Well done Graham Bonney (aged 8), you've won the final Nintendo 64!

Look at Nicholas Peaswood's amazing hand-painted artwork!

More from Mr Peaswood! It's Pasta & Meat Balls Mario!

World-famous artist Alex Watkins draws Octopus Mario, so let's hope he adds a touch of life to this one.

Another attack of the Octopus suit is the in-game "Jet Attaque". You can launch your enemy into the air and have fun with him before you end up in the ocean.

Good entry and brill tie-breaker from Daniel Bowers!

Earthworm Mario from Kenneth Fejer, Denmark. Offensive to Paul!

Golden Parp Horn scares baddies!

Niels van Rijen from the Netherlands sent us the Astral Orb and Salsa Surprise power-ups for Mario. We especially like the Astral Orb.
Some Games are Simply Streets Ahead of the Competition

“A must-buy classic. SimCity 2000 is a big game in every sense - there’s never been a more detailed or comprehensive sim on the Super N64.”

sometimes we wonder who is the authority around here! You all seem pretty convinced that CVG knows what its talking about, but you can't resist having a dig can you, eh! "Nice mag - but..." seems to be the general rule at the moment. Well, we do listen you know, so hopefully the masses won't be forming a rebellion in the long run. We only live to serve, etc..."

1997 is going to be a big year for CVG and its readers, and we want all of your ideas, comments and suggestions to help keep us in our position as the UK's number one video games magazine.

WE NEVER MADE IT UP!

Dear CVG,

Following from Ryan Murray's letter (CVG issue 180) I have to agree with him about the difficulty of choosing a game across a number of formats. I would like to see a comparison column so that you could point out to developers particular weaknesses you have found between one format or the other. This might help them to try and improve on those weaknesses for other games currently in development.

I'm very pleased with the much improved layout of the magazine and have found that a number of other magazines have changed their look to try and compete with you. Congratulations on taking a bold move on changing the look of a popular magazine and being the first to experiment with this new look. I do have one gripe with it that does bring down the look somewhat, and that's the paper in the Free Play pull-out. Where did you get it from???? It's more akin to the paper you find in public conveniences and not a top-selling multi-format magazine like yourselves. Apart from that, I think the magazine's tops and look forward to each issue.

Ian Johnson, Langley Mill

CVG: Both Japanese and US N64s don't put out an RGB signal. The best quality picture you can obtain is through an S-Video socket, which is placed near the AV sockets on most modern tellys. BUT your TV must have an NTSC monitor built in for the picture to be displayed in colour. The S-Video picture is almost identical to RGB SCART, but if it's RGB SCART you're after the only option is to pay for a reputable engineer to adapt the N64 internally.

BARKING IN BARKINGSIDE

Dear CVG,

One thing lately has been bothering me. Well I heard that the ELSPA rating on the back of video games cannot be used to prevent people from actually buying the game, and that it is only a guideline for parents etc. But when I went to buy Quake for my PC the bloke at the shop wouldn't let me. I can't understand why. If you don't print this letter I'll kill you for absolutely no reason, but can you print it anyway. Keep up the good work in this fabolous mag that I will keep buying forever.

Jeremy Chow, Essex

CVG: Either this letter is a joke, or that "bloke at the shop" knew exactly what he was doing. Quake, in fact, carries a legal BBFC 15 rating. Does Jeremy Chow walk around with a combat knife clenched between his teeth or something?

ALL MOD 'CONS'

Dear CVG,

I am a disabled person who likes playing video games so I bought a PlayStation from day one. But I wish I'd bought a Sega Saturn as it's got all the good games. So I bought a Saturn a couple of months ago, I could have gone to the Arcades but how many do you know have lifts or ramps, for example Sega World? I've read nothing about a lift, I'm sure that lots of disabled people like playing video games.

M Ali, London

CVG: We spoke to Freuds, the PR company who represent SegaWorld, and they explained that there is wheelchair access - though it is the policy of London's Trocadero centre to only admit three people in wheelchairs into the complex at any one time. This may seem harsh, but it's due to fire regulations. Anybody who requires a wheelchair to get about is allowed into SegaWorld free of charge. And if you have an assistant with you, they get in for half price. If you have any further questions, here's the number you should call: 0171 580 2626.
64-BIT! 3D! AWESOME!

Dear CVG,

Brill mag. Wicked poster. Any chance of more in future issues? A few questions!
1. I’ve heard a rumour that Japanese N64s can play UK/US games. Is this true?
2. Are Sony making a 64-bit upgrade? In issue #174 Tom said “Sony are working on a PlayStation upgrade.” Then, in issue #174 he said “Don’t hold your breath.” Well, are they making one or not?
3. Tekken 3. Any more news? Will it be released on any more systems?
4. Street Fighter 3D looks cool! It will come to PS won’t it?
5. Star Wars: SOTE looks awesome. Any news on the storyline?

PS I killed a person called Pink Floyd in network Quake. Was it evil?

Sean Cooper, Dublin

CVG: 1. Yes, but there is some minor surgery required on the casing.
2. They’re almost certain to be a follow-up to the PlayStation, yes. A 64-bit upgrade for the existing system, no.

ED: It probably was me. You can normally tell, as I spend more time sending messages than fighting.

T-T-T-TEKKEN T-T-T-2

Dear CVG,

You are my last hope. I have put this problem to everyone I know and I just CANNA get an answer! On the 18th October 1996 I bought a PlayStation, my second one at that (I sold the first because of lack of software at the time). Now since I didn’t have any games with it, I had a lend of a couple of my friends. These all worked perfectly. Soon after buying my PlayStation I purchased Tekken 2 (one of the main reasons I bought another one and) brought it home to grace my PlayStation. Now this is where everything started to get weird.

First of all Tekken 2 worked perfectly. Then, after a day or two it suddenly started playing up. By this I mean that the intro FMV would be all scrambled and the music was just so broken up you couldn’t even make it out.

This problem seemed to effect the in-game music as well. Then the game wouldn’t load properly either, taking absolutely ages and the majority of the time it crashed. This also affected the end sequences. I took Tekken 2 down to my buddy’s house to see if it would work. To my amazement it worked perfectly.

Impossible to insert the ‘chip’, and in the process completely messed something up. I mean something like the speed the code runs off the CD. This is the only thing I can think of because my friend’s PlayStation is an older model.

Please can you help me clear this up, because you are the ones that people like Sony and Namco listen to. I’d also like to hear from anyone else who has experienced this problem.

C Coleman, S Wales

CVG: We’ve had complaints from a fair few people about this problem. The route of the problem is reputedly the plastic ‘turbine’, which distorts when overheated. After a few months of continuous use this causes games to suffer dropouts in the music, or FMV to stutter badly, and in some cases fail to load at all. As you can imagine, all our PlayStations are full-on all day, so are struggling a bit. If your PlayStation is going nuts, try turning it on its side, or even upside down as a short-term measure. However Sony are especially efficient at meeting their customers’ needs, and have been known to replace systems free of charge, within reason. Also, the most recent production line are fitted with metal components to postpone any malfunctions.

The problem however progressed on my PlayStation – now it won’t even load. I know what you’re thinking – the lens is dirty the disc is scratched and dirty. This also definitely is not the answer. Now could it be that Sony have changed the insides of the PlayStation once again as to make it

Released to attract people to the Saturn. This is where my semi original ideas come in. Why don’t Sega...

1. Compile three or four demos of upcoming or classic games and give them away with their top titles.
2. Sell the CDs to top magazines such as yourself who then give their readers the opportunity to send off for the discs.

The point that I am making is that my demo disc told me more about WWS97 than any review ever could. I got to play it. I felt what it was like to win a match. To score a goal. As I like to try before I buy it was perfect for me, and I am sure that I am not the only one with this attitude to games.

Robert Small, Lytham St Anne's

CVG: Yes, it is important for players to get hands-on experience of games. So it’s frustrating to see such dismal setups in a lot of the major games stores, and especially the consumer electronics stores. Wish we could mention some names here! Point is, if more people could experience those great games we say are worth buying, it’s more than likely that more games would sell. Sadly cover discs are out of the question for CVG – we cover too many formats to keep everyone happy. The demo disc idea is definitely a good one for Sega.

They read this magazine, so...

BUILD IT AND THEY WILL COME

Dear CVG,

The point that I want to bring to your attention is simple. The demo disc which I found on a Sega Saturn Magazine caused me to go out and spend £45 on World Wide Soccer 97. Why? Because I was so impressed by the demo version of the game that I could not resist buying the full game.

Then I opened up the December edition of your most hallowed mag to discover that Sega are releasing a ‘special’ version of NIGHTS to encourage people to vote Saturn. Now I know this is also open to existing Saturn owners but let’s face it, Christmas NIGHTS has been

Sega WorldWide Soccer 97: Playable demos encouraged sales of the game.

We think that the free Christmas NIGHTS demo will help sales of “real” NIGHTS.
**DUN WAITIN**

Dear CVG,

As I have recently subscribed to your excellent mag, I feel obliged to add my opinions and beliefs. This letter has been written in the heat of my blistering rage! This rage was brought on by the sheer laziness of THE Games (the company that took over from Nintendo UK). They have failed to stand up for the gaming public of Britain; they have let release dates slip for the Nintendo 64, and go back on their words due to any sudden whim of Nintendo Japan (I am referring to the promise of a better deal for all RPG fanatics of Britain, with many more releases supposed to occur; but they never did). So I have moved my financial backing to the importers, and I have sold many foreign counterparts. They have all the latest releases months before the official release date, at around the same price thanks to the favourable exchange rates, and you do not get those annoying black bands above and below the screen if you buy an import machine. I can only assume that THE’S utter lameness is due to the fact that they are a relatively new company, and they don’t have the guts to stand up against the flow of Nintendo’s overbearing word. I just hope they get their act together soon.

Jeffrey Sheen, Crowborough

---

**WHAT YOU DON’T KNOW**

Dear CVG,

There’s something that’s been bothering me for a long time. A lot of letters that I read in mags and things I hear from other gamers are biased towards games, companies or certain systems. People blabbering on about how their system is top notch while others are no good and a waste of money. It seems that some people are busier doing that than enjoying their games. I’m 20 years old now and I’ve been playing games for quite a while. I’ve been very happy with every system I owned. In the beginning I had an MSX. I didn’t know anything about specs or other systems. I was just having fun playing the games. And all the while I learned more about consoles and the whole gaming scene. I also noticed people being biased, including myself. But then I thought: Isn’t this about entertainment and having fun? I decided to do a poll for about a year now and because of great games like NIGHTS, Virtua Fighter 2 and X-Men, I bought an import Saturn this year. And I hope to own a Nintendo 64 by next year or so. You don’t have to own multiple systems to appreciate them. I’m just saying that you should have fun with your machine and have an objective opinion towards others. As for games mags, there aren’t many that cover all systems and are unbiased. In fact, there’s only one, and that’s CVG!

Peter Klunge, Appingedam

---

**CVG:** Right, so now it’s our fault?! We know that there are lots of players out there who don’t buy games magazines, and we’re all dead busy deciding what to show you elsewhere. Unfortunately that’s not the kind of culture we’re trying to create with CVG – we want everyone to appreciate all games!!! So, hurrah for Peter Klunge and...

---

**FOR DIE-HARD FIGHTING FANS ONLY**

Dear CVG,

As much as I love Street Fighter and Capcom, and I mean love as in manically obsessed, I have a confession to make. I am rapidly coming to the conclusion that SF has been usurped by AM2’s masterpiece VF3. In the past my preference, and money, has always lied with Capcom’s fist feast, but after weeks of spending far too much money on VF3, at £1 a copy, I feel Sega have produced the ultimate fighter yet. So far, the graphics of VF3 are stunning, but the gameplay has blown on VF2 to make the most enjoyable game I have played in a long time.

I really wish Capcom to sway me back to their flock with the upcoming SF EX, SF Zero 3, and of course the legendary SF3. But I have my doubts, SF Vs X-Men being the main cause of my concern. Yes it is a very impressive game, watching Apocalypse for the first time with other avid gamers, I remember all dropping. But within two weeks of release I was sick of it. I’ve been locked with all 17 characters, except for an occasional spin with my favourite Cammy and Rogue, the game fers little to swaying me away from the classic VF3 and KOF.66 - in my opinion the best 2D beat em around at the moment. Come on Capcom, pull your socks up to a Saturn Star Gladiator, a PlayStation Super Heroes, arcade SF Zero 3, and my biggest wish, $F3 blow away all competition.

Before I sign off could you please answer my Capcom crazy Q’s please:

1. Who is the dude in Guy’s ending (and in the portrait of Guy on the Saturn illustration)?
2. Is Dan the son ofouken (Sheng Long)?
3. I presume that is Gouken who appears in the Saturn illustration of Dan with a bloody face. What is Dan’s relationship to Sagat? I once read that Sagat has a father, who was stated as being Donovan from Vampire Hunter. What’s the deal?

Finally, for $F freaks like me, any chance of the following two features in your excellent mag?

1. SF1 feature, pics and character profiles. I haven’t seen the old game in ages and I can’t remember who the fighters are who didn’t return.
2. A SF history chart showing all the characters and their relationships to each other, similar to the Tekken 2 one in the CVG review for this game. (Like many others I have the Japanese copy of SF Zero 2, and thus can’t read the dramatic battle speeches and character endings.)

Liam Michael Wragg

---

**STAR LETTER**

**GIVE US A CHANCE**

Dear CVG,

As a newly converted Saturn devotee I must admit I am slightly alarmed at the demise of so many computers/consolers in such a short time. Although consoles have been around for more than a decade it’s frightening to see how many systems have been dumped for more powerful hardware. Less than two years ago Drive Mania was strolling around the block, assured of its God-like ability for gaming potential. Yet it’s been dropped faster than the Spectrum in favour of 32-bit gaming. What’s more scary is the potential of the number of rival companies vying for a slice of cutting edge technology. How soon will the 32-bit become obsolete and the Nintendo 64 a thing of the past? It seems that the drive for more powerful (and expensive) consoles is heating up and while some may swoon over the potential of the PlayStation 128 and the Saturn 512, the existing machines will never be fully exploited and Mr Consumer will pay through the nose for hardware that’s obsolete within a week.

Matthew Bullman, Airedale

---

**CVG:** From a gamer's point of view, especially those who invest large amounts of money building a huge collection, to see their machine become 'obsolete' is a major concern. But there is a large element of peer pressure involved here - you don't have to buy a new machine the moment it's launched, and hardware manufacturers do support their older machines until the bitter end. It's in their best interest too you know. Besides, six or seven years is a fairly good innings for any piece of hardware, let alone one that's so fashion driven as the console. And the 32bit scene is nowhere near the size of the 16-bit one at this stage of its development. Perhaps it seems like some users such as yourself demonstrating just how far they're willing to go within a reasonable budget in such a small time scale.
While we reviewed *Virtua Fighter 2* before our new, improved High Five rating system, there’s no doubt at all as to what it would score if we re-reviewed it today – a High Five, of course! It’s one of the best console games available, and arguably the best fighting game around (other than *Virtua Fighter 3*). So imagine how excited all of us fans got when Sega recently announced that a game combining *Virtua Fighter 2* with another of AM2’s incredible High Five scoring fighting games – *Fighting Vipers* – was to be released! Imagine how we fell over at the idea of new moves taken from *Virtua Fighter 3*. Imagine how we screamed at the thought of ten new fighters taken from other AM2 classics! And imagine how we jumped at the chance to play the game and sample these incredible features for ourselves!

**THE MEGAMIX!**

*Fighters Megamix* has EVERY character from *Virtua Fighter 2*, including Dural plus EVERY character from *Fighting Vipers*, including Mohler, B.M., and Kuma Chan! On top of these 22 fighters, there are another 10 secret characters to find and master! Because of the similarity of the two games, combining all of the fighters into one was possible, and they seem as though they were made for each other!

- The coolest *Virtua Fighter* is probably the best Megamix character!
- Jacky is a much flashier fighter than he was before. He’s also VERY quick!
- “Aaaaaaaa Willllliiiiit!” Jeffry is back, with some painful-looking new moves!
- Lion has lots more low, dashing attacks than he did in *Virtua Fighter 2*. He’s annoying!

The 22 fighters available from the start of the game. The “?” fill up as you play the game more!
Not only does MegaMix have all 22 fighters from AM2’s main beat ‘em ups, but it’s also got another 10 from their other games! Every character has got their own stage to fight on, but we’re not going to reveal how they look just yet. The 10 secret characters are as follows: VF Kids Akira, VF Kids Sarah, Renegade (from an old and obscure Sega game), Silva (a prototype fighter from early VF1 demos with a big sword), Bark (the polar bear from Sonic Fighters), Bean (the duck from Sonic Fighters), Hornet (the car from Daytona USA), Janet (from Virtua Cop 2 – she’s just like Aoi in Virtua Fighter 3!), Una Bahn (a powered up Bahn), and Deku (a big, smiling bean with maracas and a hat). We’ve played as all of these characters, but aren’t showing you anything of them or their fighting styles yet. Just be patient and wait until you play the game - you will be rewarded with fantastic surprises!

At the moment, whenever Shun drinks his wine during a fight, a small bottle appears above his energy bar to show how much he’s had.

Possibly the most exciting thing about Fighters Megamix for big fans of the Virtua Fighter series is that all of the VF2 characters have most of their new moves from VF3! This means that Wolf has all of his new grapples, Shun can do far more weird drunken moves, and Kage has his spectacular backflip throw! This adds to the game massively, and gives owners of Virtua Fighter 2 and Fighting Vipers another reason to buy MegaMix!

Every character has got their own stage – the Fighting Vipers stages still have the walls of the original game, but the Virtua Fighter stages have had the rings removed. These stages now go on forever, like they do in Tekken 2. There are also some backgrounds from Virtua Fighter 1 added – Kage’s forest and Dunk’s bonus stage, for example – with the rings removed, as with the other VF stages. Sarah’s excellent VF2 background, complete with flashing floor panels which light the fighters up from underneath, is also in the game with big neon MEGAMIX signs as walls! And an extra bonus – the Virtua Fighter 3 desert stage is here too!

And kicks them in the back as he flies past! He then flips and lands perfectly on his feet! Wow!

One of Lau’s amazing new Virtua Fighter 3 throws!
WHO SHALL WE BEAT UP TODAY?

The way that Megamix works in one-player mode is very different from previous AM2 fighting games. At the start, you choose one of four paths through the game – Novice, Virtua Fighters, Fighting Vipers, or Girls. After fighting through all six opponents in any of the paths you meet a mystery boss, represented by the “?” at the end. Once this boss has been beaten, they are added to your collection of secret characters and you can play as them at any time! After a while, more paths through the game open up – Dirty Fighters, for example!

ESCAPALOLOGY WITH FIGHTERS MEGAMIX!

Another Virtua Fighter 3 feature is the “Escape” button, enabling every character to dodge into or out of the screen. The Escape button is usually one of the top shift buttons, but can be configured to whatever you want. Like Virtua Fighter 3, the game benefits greatly from this new freedom of movement, letting players move away from walls or dodge attacks!
THE VIRTUA VIPERS VS FIGHTING FIGHTERS!

Putting the Virtua Fighter characters against the Fighting Vipers makes everything a bit unbalanced. To sort this out, there are two modes – one to make the game play like Fighting Vipers, and one to make it more like VR!

VIRTUA FIGHTER MODE

When the game's set in Virtua Fighter Mode, all of the fancy effects of Vipers Mode are removed. Also, the action is toned down a bit – uppercut attacks don't throw people so high in the air, and tag hits don't send people flying backwards so far. The armour breakers and mid-air recoveries are also removed, making it play a lot more like Virtua Fighter 3 overall.

FIGHTING VIPERS MODE

In this mode, all of the Virtua Fighter characters can do armout-breaking moves, shown by a white flash just before the move connects, as well as the mid-air recovery of Vipers – pressing all three main buttons at once makes the fighter flash green and land on their feet. And they can all do Fighting Vipers flashing power counters! There are also fancy smoke effects on certain moves, small explosions show hits, and dust flies up when someone hits the floor.

A BRAND NEW WARDROBE TOO!

In the early version of the game we played, all of the Fighting Vipers had new second costume colours. In the finished version, EVERY character will have new outfits! We’re not revealing all of them here – instead we’re just showing a few of the new Vipers colours.

- Honey's new yellow dress. There's also a special costume for Honey, where she's wearing long striped socks!
- Picky's got a new green outfit, and his Pepsi board's been removed. Instead, it's got MEGAMIX written on it!
In the new Survival Mode, players are challenged to beat as many people as possible in a time limit of 3, 7 or 15 minutes. To make it extra-difficult, you only have one energy bar with which to achieve this!

Like both Fighting Vipers and Virtua Fighter 2, Megaman has a team battle mode, which lets players pick a number of fighters and pit them against a friend’s team. When one fighter runs out of energy, they are out of the game and the next team member takes over. Simple!

**LOVELY LIGHTING!**

When it was first announced that there was going to be a game combining Virtua Fighter 2 and Fighting Vipers, everyone wondered how the graphics would be done. Would it have VF2’s high resolution or Vipers’ light sourcing and shading? The answer is that it’s very similar to Fighting Vipers, only enhanced slightly. All of the Virtua Fighters have been redrawn to take advantage of the new light sourcing, and they look pretty damned good for it too!

- Jane’s stage has four coloured light sources.
- Dural sometimes looks brilliant with the new light sourcing on her.
- Old Armstrong Town is set at sunset, so there’s an orange haze across the whole stage.
- Kage’s forest is very dark, with a strong light source to one side.

**PERFORM A RUNNING THROW ON A WALL-LESS VF STAGE, AND THE OPPONENTS STAGGER A LONG WAY!**

- Jacky being forced through Honey’s wall!
- Wolf is now one of the best-looking fighters.
- Smash! Sanman’s enormous backside blows Picky’s skateboarding armour off!
NEW ROMANTIC MAHLER!

In Fighting Vipers, there's a secret fighter called Mahler who wears a brown costume with a snake helmet and shoulder pads. There's also a playable boss called B.M. (Big Mahler) who is identical except for a few extra moves and a few inches of height. To distinguish between the two fighters in Megamix, Mahler has been given a completely new costume which makes him look like something from Adam and The Arts!

MAHLER doesn't wear a snake headdress any more - you can now see his face with a silver streak across his nose!

WEAPON BREAKERS!

Another new feature lets players disarm characters with weapons! For example, if you hit Picky enough times, his skateboard begins to flash red. Hit him around some more and it might even explode! The same goes for Ravel and his guitar!

AM2 FIGHTING MASTERS!

By the time this issue is on sale, Fighters Megamix will have been released in Japan. Next issue we'll have an update on the game, as well as some details about the final UK PAL version. Don't worry, before long we'll be reviewing what could be one of the greatest fighting games ever in time for the UK release in March!
Once again Namco take driving to the outer limits with a race game so intense you ought to get a medical before playing!

Get ready to take the wheel of the third generation of PlayStation software. Namco are among the first developers to unlock capabilities of Sony's machine which we didn't think possible. *Rage Racer* is deep. It is complex in terms of technical achievement, which is obvious from the first lap. And it respects the obsessive mind of a gamesplayer who rises to the challenge of what others call impossible. Of course on the surface you are welcome to assume this is *Ridge Racer* under a different guise. A new circuit, that's all. Impressive choice of cars, big deal. But play *Rage Racer* and you will emerge hours later, brain buzzing like you just had jump leads wired to your ears!

*RAGE RACER* THE DEEP PRIMITIVE ROARING EXHAUST NOTES TILLATE THE BASE INSTINCTS OF THOSE WHO BECOME KNOWN AS RAGE RACERS.
NO ONE KNOWS HOW THE RACE IS STARTED OR HOW THE CONTESTANTS BECOME KNOWN AS RAGE RACERS.
CONTESTANTS DANGEROUS LIVING ON THE EDGE. THOSE WHO LIVE FOR THE MOMENT AND LOVE THE HEADY PERFUME OF NITRO, SMOKED RUBBER AND HOT ASPHALT. WEETING TOGETHER FOR ONE PURPOSE TO BE THE BEST THERE IS. THE ULTIMATE "THE 4 RAGE RACER."

CAR STRUCK - WE'RE IN LOVE!
The whole underlying attitude behind *Rage Racer* is very personal. To drive a car you first have to own it, whereas in *Ridge Racer* and *Revolution* there is a wide choice to suite all tastes. Your first car is a standard German-style 'Gnade' - evenly balanced, but the least exciting on offer. Money earned from success in the Grand Prix opens the garage to more exotic motors.

**GNADE: GERMANY**
Only one model of car from this manufacturer, but it's a great all-rounder for drivers who aren't too ambitious. All the stats level off at the three-quarters mark, so there's no quickness to exploit. Looks wonderful when customised though.

**WIZARD: AMERICA**
Think Chevy and you've got the general idea. Handling of this trio is relatively light, forcing drivers to power-slide their way to glory. The Instinct and Bayonet models are styled after the Corvette, while the Hijack is a classic Pick-Up.

**ASSOLUTO: ITALY**
All the charisma of any Lamborghini or Ferrari. These are built for flat out speed. Torque is fairly obtuse, making tight corners a nightmare unless you've perfected those power drifts. Anepardo is the most expensive car in on the market.

**RAGE: FRANCE**
Small cars with a big appetite - eating up the opposition like Pac Man, and just as nimble. Pretty names like Alouette, Abeille, and Pegasus are clues to their character - sharp, clean, and classy with it. Check the classic design of the MT only Pegasus.
LIVE FOR THE MOMENT

Precision — that’s what Time Attack is all about. So much so that Namco measure a driver’s performance in Section Times too — showing you exactly where you’re gaining or losing time. After each section ends the section time is displayed briefly on screen, offering a plus or minus comparison time.

SLIP AND SLIDE - ENJOY THE RIDE!

No way is anyone going to attain the higher classes, let alone the amazing beyond, with basic driving skills. Success is only half-way assured once you’ve learned to Power Drift. In the Ridge Racer games, drifting usually involves slamming the brake quickly, then accelerating out of the controlled spin. In Ridge the technique varies from car to car, but mostly involves taking the pressure off the accelerator for a split second, then jamming it back for the drift. In the case of the Age models, drifting is hardly necessary at all. But the Lizard and Assoluto depend on the technique.

A diagram to show how a controlled drift can make all the difference when it comes to maintaining a fast driving line.

100+ BPM HEARTBEAT!

To accompany a seriously exciting racing game, Namco’s musicians have created some seriously exciting BGM. There are nine new tracks in total, all charging back to charge the flow of blood through your brain. If the action doesn’t get you straight away, the music spurs you on until the adrenaline catches up.

Virgin territory, just waiting for challengers to take control and go for it!

Check these distance shots, showing how Namco have really improved the graphics engine.

What the heck is this?! Bet you’re just desperate to know. Turn to Page 26 and find out...
RAGE RACER: GRAND PRIX

DON'T BLINK OR YOU'LL MISS IT!
You'll be stunned by the incredible depth and detail Namco have worked into the locations in Rage Racer. Easiest way for you to get an idea of just how incredible the game looks is through a customary guided tour of the new island. It's mostly European in appearance, extending as far as Greece. The atmosphere is certainly much different to Ridge Racer and Revolution.

MYTHICAL COAST
A tour of the whole island, initially giving drivers a chance to admire the views and get used to the new car's handling. As it's so straightforward though, CPU drivers are difficult to beat in later classes.

OVERPASS CITY
Combined stress of trying to gee your car up the steep slopes, and terror as you plummet toward a severe curve. You will be amazed at how detailed some of the views are here, it ain't called Overpass City for nothing.

After clearing the first tricky corner, a steep incline heads toward a tunnel past a giant waterfall. As you drive by you can hear the rumble of the water.

That sunken acropolis is pretty. But you hardly have time to appreciate it as you career toward the first power-drift opportunity in the game.

Chance to gather some speed along the coast, screaming past the white-washed buildings to the right. Keep an eye out for the windmill on the left.

This Acropolis is your cue to slam the brakes before taking the dive into a severe right hand power-drift. A brief opportunity to overtake here.

Yikes! My low-grade Age is never going to make it up there! Does this car come with an oxygen mask, or what? Narrow as giraffe's neck too.

Hard to judge this corner as it dips low into the rock. Even when you know how to take the curve, there may be other cars preventing a smooth run.

We chose this shot to give you some idea of how good the depth cueing is in Rage Racer. At such high speeds being able to see this far ahead is very useful.

Time this power-drift badly and the longer cars are likely to get wedged! The only alternative is to slow right down which is just as clumsy and embarrassing.

Use your best power-drifting skills to emerge from this S-Bend unscathed. It's an incredible feeling when you get this section just right!

This iron bridge presents the best overtaking opportunity in Overpass City. Notice how far you can see into the distance once again.

Common to all circuits, but worth commenting on once. These overheads swish by, and the city is seen beyond. At night this section is especially impressive.

Amazing view of the coastline, interrupted by the first of two fly over bridges. Cars can often be seen racing along the bridge in real time.
Burn through this forest by tucking in close to corners. It's always tight, but most cars emerge unscathed. Besides you need the velocity for the hill after the next left.

**LAKESIDE GATE**

Perfect your blink-of-any-eye reaction time, as you try desperately to ignore the wonderful scenery. Nice trees... Tight chicanes and corners tucked behind rocks make steering without any kind of collision near impossible.

**THE EXTREME OVAL**

Excruciating and painful. This apparently basic circuit is, mentally, the most challenging. Overtaking at maximum speed is a thrill like no other, and any lead you may have can all go to pieces in an instant from just one nudge.

This time the tunnel directs cars off to the left. It's extremely tight in here, so steal your position before heading into the corners at high speed.

As cars exit the tunnel the view ahead is very cool. You can see where the road is sectioned off, and a small sign indicating a chicane is visible.

Thought you'd appreciate this beautiful shot of the starting grid at nighttime. Before the nightmare that is The Extreme Oval.

A deceptively simple left-hand curve - the first of the course. It tucks in sharply behind the wall however. With other cars here it's really tough.

First time you would feel the benefit of an analogue steering device is here. You can hear the fails rumble, just like the one preceding the first tunnel.

Attack this chicane with confidence. Too slow and the minor adjustment required to make it through becomes a clumsy mess. You need speed for the oncoming hill.

In the approach to the tunnel, you can see the opponents in the distance. At this speed you'll be on them soon enough, so plan your move.

This sharp left leads out of the tunnel, whereupon drivers need to correct the steering or else go smack into a wall. Responsible for many headaches.

Look how far into the distance you can see here! The bridge and its preceding left-hander are wide open, encouraging drivers to speed ahead!

Chance to build up speed on the bridge, but not for long as the corners ahead are slight but tight. Shame you can't look out over the water, eh...

An impressive shot of this flyover bridge, but the important information is below. Cars tend to jam side by side around that corner. Overtaking is tough.

You can tell this is a high-velocity circuit just by looking at this corner. Imagine how fine you can cut lap times just by entering this bank just right.

COMING SOON
BACK AT YOU AGAIN

We expected some kind of reverse mode in Rage Racer. It’s a simple enough assumption to make since both Ridge Racer and Revolution had the same feature. What we didn’t plan for was a fully fledged competition, selectable from the main option screen - Extra GP. More than just a bonus game, Extra GP even renames the five Grand Prix classes to establish itself for real. Originally the first class is called Calme. In Extra GP it is Aisance. After that it get more interesting, as the second and third classes are called Agitation and Irritation respectively. What are the chances of class five being RAGE!? We're aiming to find out.

BEHIND YOU!

Evidence that Extra GP is equally well thought out as the standard competition is there if you look closely enough. For example why else would Namco create a giant logo to sit on the reverse side of this hillside. Also there are sections of road which present a new challenge to drivers other than mentally exchanging right for left and vice versa – new power-drifting opportunities, for one. Some of the breathtaking views encountered could only have been engineered that way. This is truly awesome!

NEG-CON NOT NEGOTIABLE

While it is possible to have loads of fun playing Rage Racer with the standard PS controller, Namco have done a great job convincing us that the Neg-Con is now practically essential. Extended corners require locked steering to manage perfectly - something which the gruelling Extreme Oval demands. Controlled power drifting around corners, and minutely adjusted straights through narrow chicanes pay off for an analogue device of some description. Worth thinking about we reckon. Rage Racer takes itself very seriously in this respect.

COMING SOON
SUCK MY CUSTOM-LIZARD EXHAUST HOME BOY!

Another vital element, which we have reserved until the end because it's so brilliant, is the custom option. Investing in a new car is not always the fastest, or indeed coolest method of improving your chances. All excepting the Assoluto Anerpudo, and ÁGE Pegase are able to reinvent their prowess through extensive bodywork and engine tuning. As well as visibly changing the cars, with the addition of spoilers, extended wheel arches, and monster air intakes, the engine noise is altered too. Our best car is currently the Lizard Instinct automatic, which used to sound pretty nasty and feel sticky. Now it moves at lightning speed and screams like it has a rocket under the bonnet. You've seen the Batman movies? Like that!

REPLAY

LOGO TO GO

Paint your own logo! A fairly detailed character is drawn pixel by pixel, then printed onto the bonnet. 20 pre-drawn characters and backgrounds are also available.

CARCIC ARREST ASSURED

Rage Racer looks and plays so cool – you've just got to have it! Luckily the Namco/Sony arrangement is better than ever, which means the UK release is only a couple of months away. And with the new policy of ensuring PAL optimised conversions you will feel the full 'g's' when Rage power drifts into your house. Right, we're off to set some killer lap times!
The fictitious character Kain was once an ordinary man, unfortunate enough to have been set upon by thieves and killed. As fate would have it a Necromancer succeeded in trapping Kain's spirit, whereupon a deal between the two was struck. Kain would get revenge on his assassins, the Necromancer would get Kain's soul. Thus Kain became a Vampire! Blood Omen: Legacy of Kain places you in charge of Kain, as he mercilessly slays the inhabitants of Nosgoth. Doesn't matter whether they're armed or barely conscious enough to fight, man or woman, Kain murders them all the same! There is, of course, a point to all of this. Yes, Kain does have the opportunity to vanquish himself. And that hope too is in your hands.

Cardiac Crimson Cuisine

Kain is a filthy blood-sucking vampire! That's not just his reputation - you actually get to see him do it, over and over again. Basically his life depends on it. Unless he feeds, he dies. Certain spells, and a special variety of armor, do the work for Kain. However he starts by using manual skills.

Slight Alteration to the Menu

You may have heard that royalty has blue blood. Well, Kain has yet to find that out for himself. However he is aware of more than one variety and not all are beneficial. Drinking black blood causes Kain to lose blood instantly. Green poisonous blood gradually decreases Kain's blood supply. It's okay to drink blue corpuscles, as it replenishes magic energy. Blue blood only comes from the bodies of previous victims who appear as shadows on screen.

A game so chilling that you need gloves to play it. So blood curdling that you're heart might burst under the pressure! Now... loading...

Legacy of Kain

How to Dress Your Vampire

Aside from the blood letting, another great feature in LOK is the costume changing. As the plot starts to thicken - or should that be coagulate - Kain builds a collection of alternate suits of armor, alongside a handsome choice of weapons. These are inter-changeable from a special menu, from where you can experiment to find the most devastating combination. Eventually Kain finds himself in possession of five types of armor, and five types of weapon. Some examples we've found so far include:

\[ Kain's Weapons \]

Iron Staff Though it's the first weapon Kain owns, it's value is that it has a long reach and is quite speedy. Fends off baddies while you think of a better solution.

Muscle Primarily used to stun victims in double-quick time, though it takes longer to finish the job if it's a kill you're after. Doubles as a powerful demolition device.

Dual Axe As this is a two-handed weapon Kain is prevented from using his magic. However its authority is unquestionable. Handy for cutting down trees too.
KAIN'S VILE BAG OF TRICKS

As ever in a game of this type, we don't ask how Kain manages to keep such an enormous inventory about his person. It's because he's a vampire, okay? Vampires can do anything they like! Anyhow, his collection of magical artifacts can only used if selected. And such items are only selectable if they are arranged into one of two 'Quick Menus' - loaded up with stuff from Kain's main collection.

Sanctuary is the first item Kain collects, found in his Sanctuary no less. This artifact allows the vampire to instantly escape danger to the safety of his sarcophagus. Others are much more...violent.

Flay is a magic item which strips the flesh of any living creature, and terminates the agony of the undead. This long-range weapon, as well as producing impressive results, is the most common.

VAMPIRE ABROAD

As a delicate skinned, stiff-legged 'Nosfer' Kain is somewhat limited as to where he may roam. He doesn't like rain. Can't stand snow. Detests getting his feet wet, and refuses to climb anywhere. Guess he's just a walking and killing kind of guy! Still, there are alternative guises he can adopt to make afterlife more outing. In addition to the ones listed below, Kain may also affect the form of mist.

But after Lunch Kain's body disperses as a group of bats. This is only possible when out in the open, and takes Kain to key locations.

Big Bad - Vampire Hounds Kain chooses to adopt the form of the wolf to leap over streams, and up or down rocky crags. The wolf also runs much faster than Kain.

KAIN'S ARMOUR

Bean Armour
The weaker variety of undead enemies ignore Kain. It definitely helps to remember this, as zombies are known to rise from the floor and surround Kain.

Cross armour: An enemy's attack strength is reflected back on them, so the weaker variety tend to place themselves in waver state more often than not by their own foolishness.
INVEST IN BLOOD

The only currency vampires deal in is blood, and Nosgoth is driven by a pretty powerful stock exchange. There are two main branches.

Blood Fountain: An eerie red light fills the caverns in which the Blood Fountains hide. Drinking from one of these bestows Kain with a new power: protection from rain, or snow; increased strength, or speed of magic recovery. Another allows Kain to fool humans into overlooking his ghastly appearance.

DEAR DIARY...EEEK!

Upon reaching a key location, or twist to the tale, the player is removed from the action to watch Kain enact an important scene. Here is where the plot details are uncovered, piece by piece, through skilfully directed CG video sequences. Naturally there's one at the start of the game, which prepares anyone for the ensuing blood lust. Later Kain begins to realise exactly how he must cleanse the world of Nosgoth to repair his soul. Tie the Necromancer Mortanius' work, so it be.

Spirit Forge: For the price of Kain’s blood – almost as much as he can stand to lose before having to hunt for more – the spirits reward with a collection of magic artifacts. In the example shown Kain approaches the alter to receive a total of 10 Play artifacts. A big price to pay for so little it seems.

VOICE FROM THE CRYPT

Most of the information in the game is passed on through Kain’s thoughts, which is conveyed as a narrative spoken over the top of the action. Kain remarks on key locations, and the habits of his prey, with an English Nobleman’s repartee. The acting is very convincing. It has to be, as there is so much speech the feature would prove disastrous otherwise.

NEXT MONTH...

This shocking-to-the-core adventure, if not entirely original, is a first in one respect – it’s a truly offensive video game AND it’s a truly excellent video game. This is a colossal piece of work from Silicon Knights, who have spared no detail in making Kain’s world as believable as possible.
...there's no such thing as friendly fire...

LAST ONE STANDING WINS...

Command & Conquer is a trademark of Westwood Studios, Inc. © 1996 Westwood Studios, Inc. All rights reserved. © 1995 Virgin Interactive Entertainment Europe Ltd. Sega is a registered trademark of Sega Enterprises Ltd.
Killer Instinct was originally billed in the arcade as the first “Ultra 64” game. The logo appeared on all the cabinets and was set to be one of the first games released for the new Nintendo machine. Of course, Killer Instinct 2 arrived before long, and an upgraded version of that was decided on for the N64: Killer Instinct Gold. And here it is, with everything from the arcade version, plus new combos, new modes, and new 3D backgrounds!

**WHO’S THERE?**

Since Killer Instinct Gold is based on KI2, the character list is the same. Chief Thunder, Cindy and Raptor have left since the first game, but new fighters Maya, Kim-Wu and Tusk more than make up for them. And, while each character could perform regular combos of up to 80 hits in the arcade, everyone’s been enhanced in KI Gold so that they can reach 90!

- Not many of Maya’s special attacks are done with rolling motions, and she has no projectiles. To make up for this, she is fast and has some lightning fast combos using her knives.
- Kim-Wu is another fast fighter, but he’s got slow-to-perform fireballs to balance things out. One advantage he’s got over the other fighters is the ability to roll along the ground.
- Tusk’s giant sword makes him one of the most powerful fighters in the game, but he’s a bit slow. He’s got a good selection of special moves to cover him from aerial and ground attacks.

**3D ARENAS OF DEATH!**

All of the fighting arenas in Killer Instinct Gold are completely 3D. While the game itself doesn’t involve dodging around the ring, the view moves about occasionally, giving a good view of some spectacular scenery:

- A rickety rope bridge across a misty chasm. Enemies can be finished by knocking them over the edge!
- A huge wall through the dungeon is where the fighting’s done. Again, you can knock people over the edge!
- The view spins right around on this arena to show passing trains in the background!
- This square ring is on a mountain surrounded by mist. Finished enemies bounce down the mountain side!
- A massive wooden boat with undead oarsmen! The crates can be smashed, and opponents drowned!
- A ruined castle with an open fire still burning. To the right of the stage is a wall which can be smashed down!
BONUSES FOR MASTERS ONLY!

It's become quite common in fighting games now, but *Killer Instinct Gold* rewards players as they learn by opening up new options and modifiers as a task is completed. For example, to open a second list of hidden options, a player has to finish the game on the Extra Hard setting, only to be rewarded with Master difficulty! Finish the game on that level to get all five secret option screens, along with ludicrous speed!

Some secret options, including the great Invisble Tag (below)!

**WAX ON... WAX OFF...**

The main reason for playing *Killer Instinct Gold* over KI2 in the arcades is that you can spend as long as you like mastering ridiculous combos, which would cost a fortune in pound coins. *KI Gold's* Training Mode is one of the best yet seen in a fighting game, as the floating Master Teacher teaches you moves, combos and counters; he tells you what to do, then changes into your character and even demonstrates it in slow motion for you to copy. If you can get perfect "A" grades on EVERY challenge in Training Mode on the Hard setting, you get crowned Grand Master and a couple of special outfits are added to that character's wardrobe...

↑ The buttons you are pressing show up at the bottom of the screen. Green ones are correct.

AWWWW... LEARNING 30-NWT ULTRA COMBOS IS EASIER THAN PICKING A COSTUME!

MAYA'S JUNGLE

Enormous trees and vines surround Maya's fighting arena. Wild animals howl away in the distance to put you off!

Glaciers Spacebar

Glaciers has crashed his ship in the snow, and chooses to fight in front of it. Loose bits of ship can be knocked around.

Tusk's Stomach

The top of a skyscraper, with an excellent 3D helicopter in the middle. Hit enemies can knock the rotor blades around!

Tusk fights in the middle of an ancient stone circle, and smashes the remaining pillars as he goes!

POISON'S MUSEUM

This stage is called the Museum, but doesn't look much like the museums we're used to!

Using a hidden command, you can fight on this floating arena. It's very small, and one good combo finish is all it takes to send someone flying over the edge!

I AM GARGOS!

At the end of the game, as long as the difficulty setting is high enough, players come across Gargos. An enormous gargoyle, he's the last character to beat on the way to becoming *Killer Instinct* champion!
THE KI GOLD COMBO STARTER CLASS!
Killer Instinct's major unique point is the completely over-the-top combo system. The entire game is based around learning and perfecting complex combinations of standard attacks and special moves, and it's necessary to spend a LONG time mastering all of this before you have any chance of being good at the game.

COMBO LESSON 1: OPENERS
Almost any close-up special move will work as an Opener, making your opponent reel from the hit, and enabling you to string more attacks on the end. The best moves to use are those which make your character quickly dash in close and hit.

COMBO LESSON 2: AUTO-DOUBLES
An Auto-Double is a single press button immediately after another attack, which produces a double hit. The attacks can only Auto-Double with specific buttons. A Medium attack to follow a Fierce one, a Quick attack to follow a Medium, and a Fierce to follow a Quick. For example, if you open with Orchid's Fierce Hit/FAI, then immediately press a Medium Punch, you'll get an Auto-Double and two free hits.

COMBO LESSON 3: MANUAL-DOUBLES
Manual Doubles are similar to Auto-Doubles, only they are slightly harder to perform. It's a bit like a Chain Combo in Street Fighter Alpha, in that a quick tap of a Fierce attack, then a Medium attack will link together to give you a Manual Double. If these are used in big combos, they are very difficult to break.

COMBO LESSON 4: LINKERS
A Linker is a special move which, when performed in a combo after an Auto or Manual Double, won't knock your opponent down. This leaves you to do another Double off the Linker, then continue the combo! There are also Super Linkers which are mega versions of Super Moves, hitting many times quickly and keeping combos going.

COMBO LESSON 5: END FINISHERS
These are special moves which, when performed at the end of a combo, will hit multiple times and look great! Each character has four regular End Finishers which get more impressive and longer as they are used more, and once all four have been performed the fighter gains a hidden Fifth End Finisher!

COMBO LESSON 6: ULTRA COMBOS
Ultra Combos are special moves which, when performed after a Double of some sort, send a fighter into overdrive, backing and smashing away at their opponent! They can only be done when the enemy has a flashing red energy bar, but can be put on the end of already massive combos, and have Super End Finishers put on the end of them to get 80+ hits! Unlike the first Killer Instinct, Ultra Combos can now be counteracted, so long as the victim has enough super energy!

COMBO LESSON 7: NOW IT GETS REALLY COMPLEX!
We just don't have the space to go into real detail about Ki Gold's combo system here, but believe us: It gets much more complicated from here on! There's plenty more to learn, including Pressure Doubles, Juggles, Combo Breakers, Air Combos and Counters, Shadow Combos, Air Doubles, Mini-Ultas, Parry Moves, and loads more! You need to learn how to link the entire lesson together, memorise it, then perform it exactly right to stand a chance of getting an elusive 90+ hit combo!

ULTIMATE... COMBO!
Each of the fighters has two death moves which can only be performed when their opponent's energy bar is flashing red. One of them is a special attack which can be done from anywhere on-screen, and will start some sort of gruesomely death if it connects and isn't blocked. The other is a type of Combo End Finisher, which is put in a combo after an Auto-Double to end the fight there and then! Also, most backgrounds can be used to finish people off, with specific Combo End Finishers sending opponents flying over the edge of the level.

The deaths are a bit disappointing.
Spinal drops a giant skull!

READY
There's a mini import review of Killer Instinct Gold on page 30, and we'll be covering it in more detail (as with the other N64 games) a bit nearer to its official UK release.
Meanwhile down at the SHOCK BUSTERS...

Norm's the name, sensible viewing's the game. Watch that and you'll turn into a zombie!

This'll do the trick...

This is what I call in-home entertainment. There's no gore, no harsh language and no bimbos.

CRUNCH!

Horror movies are bad for your telly - they'll give it nightmares!

CRUNCH!

CRUNCH!

Now this is what I call in-home entertainment.

Later that evening...

a BREAK FROM THE NORM
Dig this all-action puzzle game, sure to raise a smile from all you new Game Boy Pocket owners. And GB vets – respect to you too.

Mole Mania

Mole of Steel
Muddy is such a rare mole that he demonstrates incredible strength by hoisting huge black balls around. These are used in a similar fashion to the cabbages, in that they can be rolled over enemies to wipe them out. They’re so heavy that they form an immovable barrier between Muddy and his foes if need be. Strategy comes into play. All kinds of tricks are possible with these balls.

Burrowing Buddies
There are two styles of game on the Mole Mania pak. Quest Mode is the main event, reserved for solo-players only. It consists of eight levels, each comprising around 16 stages apiece. To survive them all Muddy Mole depends on the player’s cunning to escape danger, and manipulate the objects around him. Most of the features mentioned on this page relate to Quest Mode only. Two-Player Versus Mode, which requires two Game Boys, two copies of the game, and a link cable to enjoy, adopts the Bonus Game scenario.

I Am a Mole
An essential staple of mole culture is the ability to tunnel! Taking the underground route is often the only way to avoid harm, or else get to the other side of a wall. Early in the quest, underground is a safe place to be – free from enemies. Later it’s just as treacherous as the world above. Tunnelling is the only way to reach bonus stages, and is frequently the hiding place for key items.

The Thing About Cabbages
Greens are especially healthy for Muddy Mole, though he doesn’t eat a single one. Instead he hurts them at his enemy, with such force as to obliterate them in a shower of leaves! In mole territory cabbages are viewed as collector’s items too. By dropping five into a hole Muddy earns himself a piece of heart to replace lost health. There are twenty cabbages in each level.

Quest Mode features Boss characters who are holding Muddy’s family captive. These villains fall to some imaginative traps which players must work out.

Centenary Celebration Mole
Completing Mole Mania as a game, not just finishing the quest, involves collecting every last bonus point available. To do this players must help Muddy to clear every stage, find every item, and defeat Jinbe in his sneaky bonus game. Each stage adds up to 100 points, divided between the elements mentioned above. Now there’s a challenge!

Beware the slopes!

Jinbe makes it extremely difficult for Muddy to drop all those cabbages into the holes. Every time Jinbe smacks Muddy over the head with his shovel tone is deducted!

Jinbe escapes with his bag of fresh fur.

Look, Muddy, Jinbe left a note.

Hmmm...ye-es...right... Pah!

Hey! Now that’s getting a bit nasty!

Quick, children, get in the burrow!

Eek! It’s Jinbe – coming this way!

You’re a kid, aren’t you? If you look like him, I’ll be waiting.

Come visit me in Rome Land D! De me meeting.

C’mom Muddy! Teach Jinbe a lesson!

A happy day in the sun for the Molees.

IT’S ALMOST TOO TERRIBLE TO WATCH!

Here’s the distressing sequence of events which take place before Muddy Mole embarks on his quest.

Underground Overground
Muddy is certain to be accompanying members of CVG on their travels. So we’ll report back soon with a review of Mole Mania.
‘Electrifying!’

LAWNMOWER MAN 2
BEYOND CYBERSPACE

The stunning sequel to the innovative original is now available to buy on video. Enter the virtual world that was created by one man so he could become God, and only one man possesses the knowledge to stop him... Game on.

Available to buy on video at all leading video stockists

If you go to an arcade, there’s one gun game which stands out as fun even before you’ve seen what it is. It’s a cabinet with three plastic shotguns plugged into it, just waiting for players to dish out death to all sorts of evil slime monsters. Konami, creators of the popular Lethal Enforcers gun games, are now releasing Crypt Killer, as well as their own PlayStation light gun (unfortunately not one of the shotguns) and we thought you’d like to know more about how it’s coming along.

**BANG BANG, YOU’RE DEAD!**

In the arcades, Crypt Killer was played with a brightly-coloured plastic pump-action shotgun, but on the PlayStation it uses Konami’s own light gun. The game was originally released at the same time as Horned Owl in Japan, and will work with pretty much every PS gun game, like Die Hard Trilogy. As with Sega’s Virtua Cop games, Crypt Killer is nowhere near as much fun with a joystick as with a gun.

Where do we start?

There are six main levels which can be tackled in any order by shooting the rotating pictures at the start of the game. They all stick to the same adventure theme, but go through forests, caves, mountains, and even underwater.

**Crypt Killer**

Take your shotgun into the crypt and try to come back out alive! But don’t leave until you’ve blown the zombies to pieces!

**Which way now?**

In a similar way to Virtua Cop 2, there are alternate routes through each level in Crypt Killer. Part-way through each level, the game breaks while a bald man asks you to choose a path. You must then shoot away the chains on one of two doors to pick your route. This leads to multiple endings and more replay value!

**Where do we start?**

There are six main levels which can be tackled in any order by shooting the rotating pictures at the start of the game. They all stick to the same adventure theme, but go through forests, caves, mountains, and even underwater.

**Terrors from the crypt**

You’ll come across some very strange enemies in Crypt Killer. For example...

- **Zombies** who climb from the floor then throw their ribs at you!
- **Bats** who give free guns if their wings are shot as they fall!
- **Blue Blobs** with arms! Disgusting!
- **The Hydra** with all of its heads is one of the bosses!

**Let’s kill some crypts!**

Let’s be honest: Crypt Killer isn’t the best-looking game ever. In fact, the graphics are pretty feeble. BUT, both the arcade game and the PlayStation version are good fun, and you’ll be able to find out what we think in next month’s review... hopefully.

**Even Medusa is in the game! Don’t look at her!**
IT’LL BLOW YOU AWAY.

30 ALL NEW COMBAT RACE CIRCUITS.
30 VICIOUS BATTLE ARENAS.
10 COMBAT VEHICLES.

Take a look at the roads of the future, and it's not hard to see why this game's called Road Rage! The people who designed the roads should be beaten up for sure!

Road Rage is only found in big arcades, mostly because it's such a big machine it won't fit anywhere that's less than massive! Players need to be strapped in and given a health warning before the machine spins and banks them around as they play the game! How can this experience be converted to the home? PlayStation Road Rage doesn't come packaged with an arcade cabinet, unfortunately, and instead plays a bit like WipeOut - racing hover-ships around the city of the future!

WHERE DO YOU WANT TO RAGE TODAY?

There are four main tracks to Road Rage, varying from relatively simple beginners tracks to twisting roads which go all round the backstreets of Neo Kobe. As this is the future, the roads aren't all plain and flat - there are some big jumps, banked corners, tunnels and gaps in the road to clear!

3-2-1 FLOAT!
The vehicles are a bit like those in WipeOut, in that they are floating futuristic hover-ships. There's a big choice of ships, each with its own ratings in each area of handling and speed. Letting you choose the right vehicle for each course.

WHO CAN I RACE? I'VE GOT NO FRIENDS

When playing in Time Trial mode, you get the option to save your best laps to memory card. This lets you race against a "ghost" image of yourself, so that you can challenge your best times properly, much like in most other driving games at the moment.

REALY RADICAL ROAD RAGE REVIEW!

UK PAL: Road Rage is almost finished, and the Japanese version - Speed King - will probably be out by the time you read this, meaning that we'll have a review next month. Hopefully they'll have done quite a bit of work to it...
LOOK ME IN THE EYES
AND SAY YOU LOVE ME

ONLY ON

SEGA SATURN

VIRTUA COP 2
RELOAD.
The game that really set the Mega Drive going was Sonic the Hedgehog. And because of this, the gaming world has eagerly been awaiting the first Sonic game on Sega's current machine — the Saturn. That first game is here, and it's a graphical upgrade of the Mega Drive game of the same name, released in November last year, with some incredible 3D special stages added! Of course, we're also waiting for the other Saturn Sonic game which is hopefully due next year, direct from the Sonic Team!

TOOT TOOT!
The new rendered intro for Sonic 3D is very impressive. Sonic sprinits around the Green Grove Zone, jumping over holes and freeing his tail friends from the Bebeks and robo-shells!

THAT LOOKS FAMILIAR...
Sonic 3D on Saturn is almost totally identical to the Mega Drive version reviewed in issue 180. The graphics are a lot better but the level design is just the same. By far the biggest differences are the special stages, which you can read about elsewhere on the page.

THE BRIDGE ON THE LEFT NOW WOBBLIES NICELY.
The Robotnik statue on the right wasn't in the MD version.

AMAZING 3D SONIC SPECIAL STAGES!
Getting to the special stages is done just the same way as before, collecting and giving a total of 50 rings or more to either Knuckles or Tails hidden around the levels. The new Saturn stages start with Sonic's friend flying and dropping our hero in through just like those in Sonic 2 on the Mega Drive. The characters are all completely 3D, and look brilliant — just like Sonic does in Christmas Nights.

JUST LIKE IN SONIC 2, THE IDEA IS TO COLLECT THE REQUIRED NUMBER OF RINGS BEFORE REACHING EACH CHECKPOINT.

REACH THE END WITH ENOUGH RINGS AND YOU'RE AWARDED A CHAOS EMERALD!
NEW EFFECTS FOR THE SATURN!

Of course, it would be stupid if Saturn Sonic 3D looked identical to the Mega Drive version, so the graphics have been upgraded slightly. The floors are now no longer flat-coloured chequered squares, and instead are textured. There are also nice weather effects on some stages, with rain and lightning in the Rusty Ruin, and falling snow in the Diamond Dust Zone.

Sonic 3D Starter Course

The idea of Sonic 3D is very different from previous Sonic games. In the bottom-right corner of the screen is a block of five Flickies (the colourful little birds which live on Mobius). When Badniks are destroyed, they occasionally release a Flicky which must then be collected. These Flickies follow Sonic around until he drops them off at a ring teleporter - once all five are dropped off the warp to the next section of the act opens up!

Pop goes the Badnik! Collect the Flicky from inside before he wanders off.

Get all five Flickies and they follow you in a line. Get hit and they run away!

Drop them off at the ring to open up the warp to the next part of the act!

At the end of Act 2, Sonic gets warped to Act 3 to face... Robotnik!

Mobius A-Z!

One new feature of Sonic 3D on Saturn is that a map is displayed whenever the game is paused. The screen also shows you how many continue medals have been collected.

Medals: 6
Time: 1:57
Score: 10500

IVO BIGGUN! PAH HA HA HA!

Doctor Ivo Robotnik is back again, and he tries to stop Sonic at the end of each Zone. His contraptions are just as wacky as usual, and he can take a while to beat properly - especially the final boss!

It's almost definite that we'll be reviewing Sonic 3D next issue. As usual, we can't guarantee this, as the release of the game may slip a bit. So, until next month: "believe in yourself, yourself, yourself hey!" (sad Sonic CD end song quote).
Sand Warriors lets you fly spaceships around a desert planet, following orders from your superiors, and destroying your arch-enemies. Eventually, you can get promoted, pilot more advanced vehicles, and use enormous bombs to help you in your missions! There are loads of control options, letting you use the keyboard, mouse or joystick so that you can play just the way you like it!

**Working through the ranks**

At the start of Sand Warriors, you have a basic ship - not much armour, and very simple weapons - and the rank of "Falconer". As you work your way through the game, proving yourself to your superiors, you can get better ships. There are a total of 20 different ships to pilot, with at least 10 different weapons to look forward to!

**The all-important storyline**

The story behind Sand Warriors is quite a strange one. It's set in 6225 BC, and two nations from the desert planet Taxy are fighting to decide who gets to colonise planet Earth. You are a low-ranking soldier from House Cains, and must complete your missions in an attempt to wipe out House Set entirely!

**Hi-res scenery**

Sand Warriors looks pretty incredible in places, with pyramids, valleys, temples, and even complete cities! The high-resolution 3D graphics and the detail of the scenery mean that on a powerful PC, Sand Warriors will look spectacular!

**COMING SOON**

A game set in the past, with massive spaceships and futuristic weapons, all taking place on another planet! That's got to make for an interesting game!

**Hi-res scenery**

Sand Warriors looks pretty incredible in places, with pyramids, valleys, temples, and even complete cities! The high-resolution 3D graphics and the detail of the scenery mean that on a powerful PC, Sand Warriors will look spectacular!

**For example...**

The levels aren't basic destruction missions all of the time, for example, the first level sees an enormous mothership landing outside a city. Once it reaches the floor, it opens and tanks start rolling out! Your mission is to stop all of the enemy vehicles, then destroy the mothership!

**The best way to destroy this mothership is with these rockets. They fly inside the ship, then break up into lots of smaller missiles!**

**Coming soon**

We'll review Sand Warriors for the PC just as soon as we get a finished version in. It's possible that will be in time for the next issue, but don't hold your breath!

**Hi-res scenery**

Sand Warriors looks pretty incredible in places, with pyramids, valleys, temples, and even complete cities! The high-resolution 3D graphics and the detail of the scenery mean that on a powerful PC, Sand Warriors will look spectacular!

**Subscribe to CVG! Preserve the Crest!**

Following on from last month's Hive Brain report, we have first pictures of our new Staff Writer - fresh out of pupation. Something we were careful to conceal last month, which we have only just been cleared to show you, is the Alex Huxtable Royal Crest. As a direct descendant of our ancient forefathers - the CUGS - Alex's cranium is adorned by a beautiful plumage which must, at all times, be preserved. To do so, you see, our equivalent of a mobile phone transforming Alex into a portable communications device from which we can learn of our ancient messengers' bidding. The headress Alex is seen wearing here is used to protect the Royal Crest during transportation through our patent Interstellar Staffly Extradition.

But you'll notice how the Staff Writer in its natural state of flux is also decorated by supplementary antennae which protrude from the top corner sections of the back. These are encased in the scoop-cut remnants of a giant bean pod, unique to our home. To prevent the pod from cracking open, leaving the antennae naked to the porous Earth's atmosphere, the outer case must be regularly oiled.

### Back Issues!

**Missed an issue? Wot a idiot!**

**Oct '96 # 179**

- Complete NIGHTS players guide, King of Fighters '96 moves list, every Virtua Fighter Kids move and cheat, Street Fighter 3 technology revealed, Mortal Kombat Trilogy on PlayStation.

**Nov '96 # 180**

- FREE: Tekken 2 and Fighting Vipers doublesided poster! First Virtua Fighter 3 moves list, Die Hard Arcade moves, Mortal Kombat Trilogy on N64, Crash Bandicoot review, Tokyo Game Show special report.

**Dec '96 # 181**

- First Mortal Kombat Trilogy moves list, plus cheats and hidden characters, JAMMA arcade show report, Driving game special, DD2, Mario Kart 64, Wave Race 64, Ana Street Fighter EX interview.

**Jan '97 # 182**

**Earlier Issues Also Available!**

Our clever operators are waiting to correct your mistakes!
We preach enough times about which games are best by whatever company. We expected you understood what we blather on about too. However a colossal “EH?”, size of Ed’s Tips Bible, just ricocheted across the galaxy...

...reading you loud and clear CVG fans in distress! Word is that there are some of you who aren’t so clued up as the rest of us. Worse, there are brothers and sisters out there who have lost the plot. We cannot let this go on! So our answer to all the confusion is this: a hurricane tour through the awesome world of computer and video games, telling you whose games are outstanding in the most important areas, and directing your attention to others perhaps more obscure.

We’ve spread these eight pages across the centre so that you can remove them from the main magazine for later reference. Understand that six full pages, plus one we’ve used for intriguing facts and figures, isn’t sure to provide real breadth of understanding – remember this is a ‘Bagger’s Guide’. But by giving you a taste of all the juicy bits, there’s every chance you’ll want to become a connoisseur in one or more of the areas covered.

Just like music, video games are created to appeal to many different tastes. And, just like music, the process of defining categories becomes increasingly more complex as new styles evolve from others. Sega’s Virtua Fighter looks as though it should be a platform game, but isn’t. And id’s Quake is hardly just a corridor game. We’ve done our best to nail each category as best we could.

To close the feature we have Chart Track’s market breakdown, who’ve used a slightly different group of categories. We’re not trying to confuse you, just that Chart Track’s help represent buying trends better.
WHAT FIGHTING GAMES ARE ABOUT

Easily the most prolific, and continuously exciting area of the computer games industry, Fighting has been popular since the early days – after Data East’s Karate Champ the scene has never looked back. As soon as a new style appears in the arcades, the home versions are eagerly awaited. Easily the most successful series is Capcom’s Street Fighter, which many players still follow avidly to this day. There have been many games to mimic Street Fighter’s style and in some ways improve on the formula. SNK are best known in this respect, with their Art of Fighting, Fatal Fury, and King of Fighters series coming it.

WHY FIGHTING GAMES ARE SO POPULAR

First and foremost these are the ultimate player-versus-player games. With a well balanced fighting game, the argument of who’s best is settled quickly and convincingly usually in a best of three rounds scenario. If one player is practiced and the other is still learning, a good fighting game has scope to highlight the gap in no uncertain terms. The development of artificial intelligence is crucial too, as no one wants to find CPU-controlled opponents falling for the same move over and over. It’s no surprise that Sega’s AM2 chose a fighting game – Virtua Fighter 3 – to launch their Model 3 arcade board. The detailed representation of two humans, performing complex manoeuvres against each other, surrounded by breathtaking scenery, is the ideal showcase for new technology.

3D FIGHTING

Developers are only now finding ways to nail some of the AI problems inherent in 3D fighting games. When you’re dealing with motion capture routines, in opposition to individual animation frames, perfecting collision points where fighters take hits) and where to counter attacks is difficult. Which is why even the mighty Virtua Fighter 2, and Tekken 2 are prone to cheap moves – however impressive. NOW, though, Virtua Fighter 3 is water tight. And the dodge move – soon to feature in Fighters Megamix along with other V/F3 mechanics – shows how 3D fighting games have the potential to overshadow the near perfect gameplay of the 2D fighters.

2D FIGHTING

Fourteen years down the line since Karate Champ, it’s not surprising that the 2D fighting game is now almost faultless in its finest form – Street Fighter, King of Fighters, Killer Instinct, Mortal Kombat. There are clear divisions between these styles, meaning there’s something to suit all tastes. And because these games are constantly modified to meet the demands of the millions of fans worldwide they are always in vogue. Developers such as Capcom are expert at introducing new, increasingly complex gameplay elements to keep players aiming for the top of that learning curve. And the King of Fighters series is a technique masterclass!
**WHAT RPGS ARE ABOUT**

A little hard to define, as the role-playing game (RPG) sector is so fragmented. Simply saying RPG is pretty vague. In Japan there are names to classify all kinds: Action, Simulation, Strategy, and Adventure. Over here we're less well catered for, and ours mainly settle into the Action variety. The basic attraction is the concept of character development – strength, speed, intelligence, and magic power – against a backdrop of a rich storyline (unheard of in most action games), and exquisite locations. Typically players are in control of one character in an Action RPG, whose actions are under direct control by the player. However Sega's Sonic the Hedgehog series on Mega Drive and the recent Suikoden from Konami for PlayStation adopt the turn based combat system, which is the most popular in Japan as it allows for more outrageous standard and magic attacks.

**WHY RPGS ARE SO POPULAR**

In terms of value for money it's hard to beat a great RPG. Zelda III for the Super NES has over 40 hours of solid gameplay. More recent examples offer more than twice that amount. Losing a chance (missing a life) in an RPG often means losing some of the treasures amassed along the way, so all battles are treated very seriously – and are more exciting because of it. Character development is a major part of the reward process with mighty new weapons devastating opponents which may have kept you alive beforehand. RPGs are also renowned for presenting incredible graphics, and amazing music, which is important for creating the necessary atmosphere. SquareSoft are masters of this, as their forthcoming PlayStation game Final Fantasy VII clearly shows. Get with it UK!

---

**WHAT GRAPHIC ADVENTURES ARE ABOUT**

Players adopt a more detached role as the character(s) on screen amid various set pieces, using dialogue or items selected for them. Graphic Adventures are the closest thing to an interactive movie available, so it's unsurprising to find that LucasArts are kings of this particular castle. Also known as 'point'n'click' adventures, the routine of using a cursor to prompt the action of a person or item has broad reaching consequences. Given the right item, and/or the correct choice of conversation the story goes in your favour. Anything less and there's either some kind of on-screen disaster, or nothing at all. The idea is to experiment. Recently Gremlin have been experimenting with 3D expansions on the theme, to some success. Normally works well, and Realms of the Haunting is practically a Doom-style game with point'n'click overtones.

**WHY GRAPHIC ADVENTURES ARE SO POPULAR**

The majority of Graphic Adventures aren't subject to any kind of time limit. We guess the appeal is down to people being able to solve complex puzzles. With pleasing consequences, at their leisure. Ideal for PC then. In the case of the LucasArts games there is often a lot of great humour incorporated, and as the CD-ROM format allows for studio recordings of voice actors there's celebrity appeal too – Christopher Lloyd in Toonstruck for example.
STRATEGY GAMES

○ WHAT STRATEGY GAMES ARE ABOUT
For a long time these brain-intensive resource management games have been almost exclusive to PC. This is probably due to an older audience, who are patient enough to gain enjoyment from planning for their rewards. Strategy games are pretty much split between war games and sports management titles, but the former are by far the most common. Surprisingly there are some parallels which can be drawn. They all involve starting from scratch with the worst team/amp imaginable, which players must shape up and grow into an unstoppable force. Of course the appeal of each is quite different!

○ WHY MANAGEMENT GAMES ARE SO POPULAR
Watching your team play badly on a Saturday afternoon can be bloody frustrating. So the opportunity to prove to yourself that you could manage things better is right here. Really it's astonishing how involved players get when every goal counts, and where the accumulation of money through skilful handling of the club's resources can result in the emulating of the world's star player into Grimethorpe Utd, or whatever. We know of somebody who exchanged his Street Fighter addiction for hours dedicated to Championship Manager 2.

SIMULATION GAMES

○ WHAT SIMULATION GAMES ARE ABOUT
Oh come on, this one's obvious - at least that's what you'd think. But 'Sim' games range from seat-of-the-pants flight simulators to viewing entire city networks from afar. The latter can often get confused with management strategy titles but deserve treating separately for a couple of reasons. So a simulation is exactly what the name suggests, placing the player in a 'real' situation which they learn to master then enjoy success. Simulations are, more often than not, open ended - which is the clearest distinction you can get between Ace Combat and EF2000: X-Com and Sim City 2000.

○ WHY SIMULATION GAMES ARE SO POPULAR
What the Japanese refer to as a Simulation Game is quite different to what we know. They are more into games where you can raise a Princess, dress her up in fancy clothes and meet the King, as opposed to founding the equivalent of the Roman Empire using hundreds of tiny icons, which is what we tend to go for. In either situation though, the satisfaction comes from watching something wonderful emerge from meagre origins, all thanks to your undivided care and attention.

○ WHY WAR GAMES ARE SO POPULAR
Your chance to be a prince among men, with the power over millions! On a more sober level there is the appeal that many War 'Sims' are based on historical battles - Napoleonic or even recent times such as the Gulf War, Kind of grim, but it's a selling factor all the same. For the mass market though Command and Conquer's presentation of global war against your mates - the increasingly essential network facility - makes all the difference. Plus C&C is regarded by experts as one of the best strategy games ever devised - and that includes board games such as Risk.

○ WHY FLIGHT SIMULATION GAMES ARE SO POPULAR
If you wear glasses, you can't become a professional airline pilot or fly a fighter in the RAF. Not in real life. But flight simulators allow us to fulfill these incredible dreams, to such a degree that the RAF are reported to use the game EF2000 to train their forces - yes, their game is so accurate! So the appeal here is pretty universal. The best examples allow users to participate on a number of levels, allowing GPU assistance for novice pilots, and the satisfaction of knowing you could probably fly the real thing given half the chance for those capable to take full control.

EF2000 developed by DID. So authentic that the RAF use it to train their fighter pilots.

Pilot Wings 64, for the N64. Very realistic!
**PLATFORM GAMES**

**WHAT PLATFORM GAMES ARE ABOUT**

Lead a visually appealing kind of character from A to B, avoiding obstacles and dealing with enemy characters in whatever imaginative way the games designer sees fit. Nintendo's Super Mario series has been running for years and the NES games remain a household name. Sega Sonic's spin dashness through walls. Crash Bandicoot does a bit of both. There are platform shoot 'em ups too, in which the central characters are armed with a large variety of weapons, often teleporatating and jumping through obstacles. Platform games are a classic. Stageboss is a well-known character and platform games often involve jumping on the 3D scene, but that doesn't mean they're not worth playing for. Sonic Blast on the Mega Drive is cool, and Sonic 2 is almost the same description when it was released in June last year.

**WHY PLATFORM GAMES ARE SO POPULAR**

In a way platform games are like huge ongoing practical puzzles. Some players really go for the colour of the screen, while others prefer simple puzzles. Taito's Bubble Bobble series and the Super Castlevania IV series are still amazing. The Mario games are classics because they combine elements of both, presenting tricky bonus screens between the main run and jump action. Above all, though, platform games do very well with the general public because they feature attractive characters or settings (Sonic) and are instantly playable. You don't need to be brilliant in most to have a lot of fun.

**SHOOT 'EM UPS**

**WHAT 3D SHOOT 'EM UPS ARE ABOUT**

Usually these are flight-based games, but as will be the case with the upcoming Star Fox 64, there are ground based missions included. The first popular examples in recent times, outside of the arcade, were Star Fox on the Super NES and Starfox on Mega CD. Long before those of course there was 3D shooting on the Atari ST and Commodore Amiga computers, and Namco's Starblazer in the arcade. And after that came Sega's Space Harrier, Thunderblade, Afterburner... the list is pretty huge. Basically the idea is to excite the player with the sensation of flight, and give them an amazing set of responses to defend themselves against swarms of enemies.

**ODE TO TRADITIONAL SHOOT 'EM UPS**

We're seeing much less of these now outside of the arcade. It's fair to say that they are getting pretty anticipated, much faster than the flight-based game developers. These used to be the hottest games around from the mid 1980s to early 1990s with games like the Apple II series, and Rogue Trad. Early this year Taito updated their popular Darius series for the Saturn and that game is cool though maybe only to those who loved their shoot 'em ups in the past. It's extremely difficult to make a great new 2D shoot 'em up attractive now, as we're all used to seeing enemy ships destroy other ships. Out of that there's only the mathematical appeal of being confronted enough to weave through our than or tiny bullets. Maybe we're all going soft!

**WHY 3D SHOOT 'EM UPS ARE POPULAR**

Dedicated to everyone whose only dream of flight involves carrying a big gun so that you can blast everything above and below to smithereens! We reckon the main attraction is that 3D shoot 'em ups are totally 'In Your Face'. In the traditional 2D shoot 'em ups, for example in Galaga, the alien ships are seen through a screen toward your 'face' or cannon. Now with Galervan 3 in the arcade, these enemies look almost real and fly in formation towards your head! Everyone who's into Star Wars or similar movies really go for the kind of thing. It's like you're Luke Skywalker in the Millennium Falcon or whatever. Nintendo's Star Fox really has you leaning back in your seat as you try to avoid being sucked into the blades of an alien Boss, and ducking to avoid overhead beams as you zoom beneath them. How can this sort of thrill ever fail?

**HOLD IT GUN GAMES**

Always a popular arcade pastime since Taito's Operation Wolf first appeared. The appeal of this type of game has transformed from solely target practice, to the fact that they can feature some of the best 3D graphics out there. Sega's Virtual Cop led the way, recently Namco's Time Crisis has added a new dimension with a light gun which allows players to duck and cover. These games put YOU right in the centre of the action, and that's what makes them so cool.
**Space Combat/Trading Sim**

### What Space Combat/Trading Sims Are About

Earn a reputation for being an ace pilot in some kind of incredible space force, but first you've got to prove yourself better than a low-grade rookie! Space Combat games comprise set missions of increasing difficulty, played from a first-person perspective - inside the space ship. Between times live action movie sequences, often featuring famous actors (Mark Hamill, for example, in Wing Commander III) carry the story along. Of all the games on the market, Starship and simmers offer the highest production values, with development teams such as Origin (Wing Commander, Privateer) turning Hollywood in some cases. Trading Sims are much less common, probably because they involve building whole universes for pilots to negotiate as opposed to individual battle sequences. Elite, its sequels Frontier, and First Encounters give players complete freedom. The Privateer games are half Space Combat, half Trading Sim which seems to be the way this genre is headed.

### Why Space Combat/Trading Sims Are So Popular

The opportunity to take part in a Star Wars movie is almost too much to resist for some people out there. The fact LucasArts honour this fanaticism with quality software, which appeals to gamers who haven't so much as glanced at C3PO, is a winning situation. If you're gonna become a fighter ace, outer space is a cool setting as it allows for crazy 360° dog fights, flown in incredible state-of-the-art craft brandishing weapons which are, literally, out of this world! For trading - until you've been caught for drug smuggling half way between solar systems, and lost the thousands of credits necessary for the next systems upgrade, you haven't lived.

---

**Puzzle Games**

### What Puzzle Games Are About

A much misunderstood, and grossly underrated area of video games. Puzzle games are usually fairly abstract in presentation, attempting to bore players with cute or else potty-looking characters. Perhaps the most famous examples are Alexey Pajitnov's Tetris, and DMA's Lemmings, which are as different as chalk and cheese - so this is a difficult area of games to sum up. But, in a flash of inspiration, let's try it this way: Mastering any puzzle game involves the manipulation of small 'pieces', whether it's a rodent or mathematical shape, in order to complete a task. The more you become, the harder the tasks, until only a select few mad geniuses can manage to see the end game credits. The Tetris craze is only just dying down in Japan where there was a new variation on the theme released almost every six months since 1990. We've yet to see the likes of four-player simultaneous Puyo Puyo (Mean Bean Maple, and Kirby's Avalanche) in the UK!

### Why Puzzle Games Are So Popular

You only need to look at what Tetris did for Game Boy (it made it a success) to recognise the portable potential of a good puzzle game. Which explains Nintendo's current strategy for their seven-year-old hand held - puzzle games! For the PC these are the ideal pastime for coffee breaks in the office, and anyone can play if they wish as the control system is essentially basic. On console a two-player competitive puzzle session is often equal to a work out on a great fighting game in terms of excitement. It's certainly more mentally exhausting.
SPORTS GAMES

WHAT SPORTS GAMES ARE ABOUT

Sport. All kinds. In fact sports games have been around in some form or another since the very first games systems - if you accept that Pong is passable as Tennis. Every Athletic event, every major stadium sport, golf, fishing... almost anything you can think of is now a video game of some description. Tennis and Soccer are the most popular in the UK, with Cricket not far behind. Overseas the likes of Horse Racing and Freshwater fishing do exceptionally well. It's hard to identify the best ever sports title, as the field is so diverse. But if we are to identify the most popular ever this would have to be Sensible Soccer on the 16bit home computers and PGA Tour Golf on the PC. FIFA 95 did wonders for the Mega Drive, and Super Tennis for the Super NES is a classic.

WHY SPORTS GAMES ARE SO POPULAR

Competition between two or more players is the key. The most playable two-player sports games, such as Sensible Soccer, have almost unlimited appeal because players are generally uncommitted about graphical quality. Playing as your favourite team, competing against Fuzzy Zoeller in the PGA licensed golf games, swimming for England, Boxing for the title of World Champion - all these ideals can be met in sports games. And with motion-captured realism getting more and more convincing the scope for even greater titles increases month on month. Roll on Madden 2000!

RACING GAMES

WHAT RACING GAMES ARE ABOUT

Competing in actual or fictitious motor racing events, earning enough drivers' points to progress through some kind of championship. There have been so many racing games over the years that we are now seeing numerous futuristic variations on the theme, which are all the more exhilarating because they allow drivers to race at impossible speeds in impossible craft. Wipeout, for example. The other side of the track is simulation race games, which have a similar appeal to the flight simulations in that players are convinced they could take to the real thing after enough practice! A good enough race game can sell a system - as has been proven with Wipeout and Sega Rally.

WHY RACING GAMES ARE SO POPULAR

Even your Dad is impressed by a good racing game, even if he won't take an interest in anything else. Tearing up the road is a great stress reliever, and the sheer speed and brilliance of the arcade style racers often showcase a system's capabilities better than any other game. The Wipeout games have become symbols of cool, Daytona 500 must be one of the most eagerly anticipated console titles EVER. Super Mario Kart, for its unlimited two-player appeal, is an all-time classic. And Namco's Rage Racer has just redefined music to drive by - even for the real thing! The icing on the cake is the official F1 license, which has inspired a small selection of monumental successes - Geoff Crammond's Formula 1, and Psygnosis'...er Formula 1.
As promised, here are a couple of pictorial representations of the games market in the UK. The information is provided by Chart Track, and is basically just a ‘snapshot’ of your buying habits in the month of November 1996.

1997: Here’s to another fragmented year!

As developers continue to learn more about the hardware they work with, the likelihood of new and exciting game worlds increases. You’re not totally unprepared for this onslaught however, especially not if you read CVG. The majority of great new console titles filter through from Japan, where the market is more dynamic than here. As you know we keep a keen eye on that scene. Also the PC feature on pages 88-89 gives you some idea of where that market is headed – 3D!

Expect to see teams at Core and Psygnosis really exploit that area in 1997. But there’s one untouchable, unfashionable zone which nobody has access to except the person who owns it – the imagination. Corey point, maybe, but we’re sure you’ll agree that UK gamers are a fickle bunch. Unless we can identify some degree of original thought we don’t buy it. We’re reluctant to hand over our cash for anything except the best. And CVG is here to help you identify when the best happens along.

Of course it doesn’t look like this all the time – sometimes there are fluctuations whenever a key title is released. For example in the month Formula One came out on PlayStation the car/vehicle Racing quota significantly increased over that period. However we think the information here gives a pretty good indication of the way UK trends are.

Just to give you some idea of how much money is spent on PC games every month in relation to other types of PC software. Probably if there were three outstanding games out there to last you a lifetime, there wouldn’t be such a difference. As long as you lot are out there looking for the latest greatest thing month after month you must be made of money!
Dear magazine seller,
I really don't want the hassle of fighting to escape with a copy of Computer and Video Games magazine, so will you please reserve a copy for me. Thank yoo-o-o!
This is the place to be if you want to know what's happening in the bristling hiveworld of videogaming. So don't call us asking for release dates, just look at this page!

**CHECKPOINT**

The month's events and software releases at a glance. Doc-Jan

1997 was another year that was guaranteed to be a monumental milestone in our follow-up to last month's History Of Computer And Video Games book (or as we's previously released in 15 years time!) So let's make 1997 the first important event in this month's Checkpoint timetable!

The first few months of this year hold some hugely exciting releases. The Saturn gets its version of *Die Hard Trilogy* on January 15th and Soviet Strike on February 25th. Plus *Heart of Darkness*, the long-awaited Saturn-first adventure from some of the creators of *Another World* and *Flashback*, has finally appeared at the bottom of our release schedule. *Destruction Derby* 2 hits the PlayStation mid-Jan. The PC is set for a great time too. Shiny's *MDK* is pencilled in for February, as is Peter Molyneux's epic masterpiece, *Dungeon Keeper*. Equally as awaited is *Jedi Knight*, the sequel to *Dark Forces*, set for an unspecified March release. *Bizzarely*, *Turok: Dinosaur Hunter* is scheduled for release on Feb 25th, before the N64 itself is released. Which brings us to March 1st - *Nintendo 64* hits the UK!

**AU Show**

19th-20th February 1997
(Makuhari Messe Centre, Tokyo)
The Amusement Machine Operators Union Show may not be as big as September's JAMMA, but it's set to be far more exciting thanks to the unveiling of three monster coin-ops. Namely *Tekken 3*, *Street Fighter 3* and AM2's *Supercar*. Also there will be Sega's new ski game *Super Giant Ski* and Namco's new ski game *Alpine Racer*. *Capcom will be showing Street Fighter EX* and second CP System III game *Red Earth*. They may also have another CP System II game which we know *Darkstalkers 3* is in development. SNK may unveil their new 64-bit hardware, *Seta*'s N64 arcade board could be there, and Namco are rumoured to have a suped-up System 11 board in the works. It's said to still be compatible with PlayStation, more so if they bring out an upgrade for Sony's machine. Hmmm...

**Nintendo 64 Launch**

1st March 1997 (UK)

We've waited long enough, but from Saturday 1st March we need wait no more - *Nintendo 64* will officially be here! It's gonna cost £249.99 and come packaged with one controller. Four launch titles are scheduled - *Mario 64*, *Pilot Wings* 64, *Wave Race 64* and *Shadows Of The Empire*. Prices are expected to be between £49.99 and £59.99. At present we haven't seen the UK machine or the games, so exactly how the PAL versions look and play remains to be seen.

**ATE!**

21-23rd January 1997 (Earl's Court, London)

Nowhere near as big as the Tokyo AOU, but the ATE is a good chance for us to check out what new coin-ops will be coming to the UK. More significantly, the ATE is on nearly a month before the AOU. And if our sources are correct, *Tekken 3* WILL be somewhere in this country by then, in which case it's almost guaranteed to be at the show. We can but hope. Chances of *Supercar* and *Street Fighter 3* being there though, are zero.

**AWESOME COMPETITIONS!**

And this month they are more awesome than ever! With the launch of *Nintendo 64* still confirmed for March 1st we've added it to the mix, so you can win software for all thanks to our pals at HMV!

**Dark Saviour**

We've literally been waiting years for it, but finally Climax's brilliant Saturn follow-up to *Landstalker* is about to land in this country. So, as a way of celebrating this monumental occasion, we've made it this month's hot Saturn prize. To win a copy of *Dark Saviour*, just tell us what your favourite Saturn prize is. Recipe's or better still, machines of the best!

**Tobal No.1**

Squaresoft's brilliant looking beat 'em up has yet to amaze UK gamers. But now it's got an official release, that situation is guaranteed to change. Even if the game has got a funny name, and speaking of ridiculous names, to get your hands on this truly unique and excellent beat 'em up, provide us with a new surname for Ed Lee's NED MASHMORK COMPEITION.

**Shadows Of The Empire**

Is *Nintendo 64* on your March shopping list? Want help getting the software? Why not trying winning the top-notch Star Wars license right here! Only Star Wars fans deserve to win though, so to prove that's you, tell us the name of Chewbacca's son? The wrong answer may still win if you accompany it with a picture of Chewie's boy too. Send to: PHIL'S LONG-LOST BRUVVER!

**Realms Of The Haunting**

As last month's High Five demon-strated, it's a brilliantly scary action adventure game from Tony Crowther, creator of the excellent patriotic platformer *Blagger*. To stand a chance of winning this excellent chiller, you have to show you're a master blagger like the Crowth himself. So in less than 50 words, try and ponce the game off us. Answer to: CVG IS ALL HANDSOME.

**THANKS TO OUR BUDDIES...**

...at HMV! You see it’s Dougie and Darren that help us put this page together. They provide us with up-to-the-minute release schedules and all competition prizes too. So they’re your buddies too! Of course, print deadlines mean the release schedule isn’t up-to-the-minute for you, so if some dates are wrong don’t be mad. Let’s all be pals.
Contra is back! 10 years since the original first exploded into arcades! After wowing us with Mode 7 on Super NES and cool tricks on Mega Drive, it's now on PlayStation and in 3D!

British games players might not be familiar with the Contra brand. Over here the games usually went by the name of Probotector. Remember? Good. Contra 3: The Alien Wars – Super Probotector in Blighty – is still one of the best games available on the Super NES. Now Konami bring the Contra thrills to the 32-bit machines. Legacy of War is the latest chapter. The aliens are back, and so are the big guns!

The storyline of the Contra series is simple. Somebody somewhere is doing something they shouldn’t be, so the elite ‘Contra’ force is called in to save the day. The game is set after the Alien Wars and the madness which followed, where a ruthless dictator named Colonel Bassad has plans to take over the world. Just as well, because he wouldn’t be much of a ruthless dictator if he didn’t have these ambitions. Information has come to light, suggesting that Bassad has come into possession of an alien embryo! The Colonel has managed to breed the embryo, and created an army of alien mutants. Could his domination plans finally succeed? Now it's up to the Contra forces. This time they're calling on the talents of the HARD CORPS – a special mobile task force. Can they stop the Colonel before it's too late?

Towards the end of level two Jungle Conflict, Konami have included a special treat. It’s old school video game thrills ahoy. In the specially-named Bamboo Arcade. A good idea it is too. Take a break from the hectic conflict, and unwind. The two games on offer here are updated versions of the originals. The better being Gyrus. One of the first shoot-'em ups to feature your craft being able to circle the whole screen. A 360 degree blaster of increasing difficulty. The other, a kind of cross between Tank Battle and Pac-Man, we're not too sure about. It's a strange hybrid which may have appeared under a name like Maze blaster or something similar. Best guess is that it's something just made up by the Contra team. Both games pass a few minutes. Once you've finished playing, you can even blow them up!
**MOTHER OF GOD!**

Every Contra game has aliens, and lots of them! Legacy Of War is no different. Colonel Bassad has created a mutant army of thousands to stop you thwarting his plans. He's also positioned robot sentries, missile launchers and of course – Bosses. The deployment of the bosses is quite cunning. On some stages you think you've defeated the boss, only to be confronted by another. The Colonel has been a little careless in his scheming. Hidden on each level are rooms stashed full of power-up booty. Make sure you shoot everything to discover these secrets, as you will definitely need them.

- Lots of mutant soldiers jump out of this floating disc. It must be like the Tardis because it looks so small!
- A very ugly spider with a huge mutant head. Those Konami guys are weird!
- By far our favourite boss. A huge pile of junk that transforms before your eyes. How do they do that?
- A huge pile of something! Home of this snake-like hydra beast. Toast him!
- We don't want to hurt the tortoise mummy. Well I'm afraid you're gonna have to. You see it's war, them or us!

**AND FINALLY.....**

We'll just quickly mention that the PlayStation version of Contra has a special 3D mode. We can't really say how good this is because we couldn't seem to get it to work properly. It involves wearing those glasses with red and blue lenses, and fiddling with the brightness and colour controls on the TV. It might work, but we can't see it adding a great deal to the game anyway. Alright.

**Reviewer**

Contra 3 was one of my favourite games on the SNES. Upon first play this 32-bit version left me in a bit of a shock. Where were the great colourful graphics, the imaginative bosses, and the really big guns? After the disappointment subsided I realised all these things which made Contra great were actually still here. Maybe I was expecting more. That's the real problem, when you attach a famous name to your game. It has to be really amazing to please people. Legacy of War is an above average game, but when you attach the Contra name it seems worse than it really is. For best enjoyment out of this title, just forget it's a Contra game. Instead just enjoy it for the shoot-em-up action it provides.

**Rating**

A bit of a disappointment for the hardcore Contra fans. It's still a decent shoot-em-up, but not one worthy of that name.
Hell bent on destroying everything around you in some global war? This game isn’t for you. Restore the world to its natural state or suffer the consequences!

**TERRANIGMA**

**FIGHTING FOR THE WORLD**

Let’s start with the hero – all fired up and ready to go. Very early on it is learnt that the young feller has been causing all kinds of distress around his home village. It’s this kind of mischief which initiates the wide-ranging series of events which take place in Terranigma. After helping a group of friends smash down a locked door, he discovers an ancient and mysterious box in the room beyond. Once opened, this box causes a disruption in time and space, and unlocks a doorway to another dimension. As it’s his responsibility, the hero must follow the advice of the village elder, who sealed the door on the first place, and take his chances on the ‘outside’.

**AN EXCEPTIONAL KIND OF BOX!**

Soon as the box is opened, an odd little winged creature appears. This is Yomi, who is your quartermaster for the expedition. Inside the box is a magical store, in which the hero stashes his inventory – ranging from weapons and armour, to food and medicine. In here there is also a record book, so the hero can check on his statistics, and reference guides which explain how to perform important techniques. The hero can dive into this box at any time during the adventure, to equip a more suitable weapon or seek medical assistance.

**CHOOSING THE RIGHT WEAPON**

Being properly equipped is a key factor to success in Terranigma. Unless the hero is armed with the correct weapon or shielded by the appropriate armour, he is susceptible to greater danger than necessary. In some cases he simply can’t progress any further until these requirements are met. Everything has its purpose.
PRICE YOU PAY FOR SUCCESS

While the hero is out there solving the problems of the world, he occasionally finds a rare and valuable crystal. These are accepted currency in every shop which sells magic items, purveyors of enchanted rings and the like. As magic is so potent, obtaining these crystals can sometimes be quite difficult but the extra effort is worth it. Other easier to come by currency is gained by defeating enemies. Most times a monster is slain, it leaves behind some cash. Strange, but useful nonetheless. Spend this on items such as life-giving herbs and antidotes to poison.

REWARD FOR SKILL PAID IN POWER!

The role playing element affects the game in two ways: Heeding advice of characters reveals clues to solving the mysteries of each new location. Mastery of the sword gives a player confidence to enter more fights and power up.

STRENGTH IN NUMBERS

With practice the hero builds an impressive repertoire of sword techniques. Apart from just stabbing at things, he can somersault and attack, jump and slide, dash attack, and perform a lightning-speed flurry to defeat enemies. Strength, speed, stamina, and luck are enhanced regularly after a set number of fights.

NEED THEIR WORD

Sometimes the adventure hangs on the words of a key character to get moving. During the game the hero regularly consults his friend Elle who lives in his home town. The village Elder is important, too. Aside from that, the spirits of ancient people – represented as ghostly lights – offer friendly, but often cryptic, advice.

(Above) A sliding attack is useful against smaller enemies. (Below) Dash attack is the best!

(Above) Elle is the hero’s best mate in the beginning. (Below) Talk to the ancients.

THE BIGGER PICTURE

Your aim is to restore life to a dying planet. Initially there isn’t any signs of land to support anything other than fish, so the first task is to raise the continents. Five towers exist on the “Outside”. By reaching the top, and challenging the master in each, the hero succeeds in restoring one piece of land. But this sequence, however tricky it may seem at first, is only the small beginnings of the main quest. With the continents intact, it then becomes the hero’s duty to ensure the return of vegetation; animal, and human life. After that it becomes necessary to manage their progress successfully – even going so far as to appoint Mayors for cities! All the while, the evil forces must be kept at bay by the hero’s bravery and skill. Only when the earth has been restored and evil banished can the game truly end.

A sequence similar to this is shown each time an area of land is resurrected.

REVIEWER

What you see initially with Terranigma is only a fraction of what you get in the end, and it’s impossible to predict the series of extraordinary events which take place. Control over the main character is excellent – the player is able to experiment with impressive alternate techniques, instead of being limited to one or two predictable ones. Quintet always include a sense of drama and intrigue to their games. Their artwork is stunning, and their music is invariably fantastic. So when you find yourself in a new location, the full effect is really awesome. It’s commendable that Quintet have a talent for plot development too. Where a game so huge as Terranigma could become a tedious succession of rigid routines, instead the storyline makes the whole experience exciting from beginning to end. Many of you should be pleased to know that for a skilled action player the rewards could be even greater than for those who’s just straggling through. A well-balanced, with a powerful message.

RATING

An outstanding addition to the Super NES’ library of attractive RPG-style adventures. Superb presentation, and great story telling.

61
If you’re a fan of the excellent Civilization 2 prepare to fall in love again. For here is the expansion disk of your dreams.

Civilization 2 has already proved to be a great game, and a huge seller. Its winning formula of building an empire and planning its survival through history is a completely absorbing experience. Best described as a cross between the classic board game Risk and the equally great Command & Conquer. Those who bought the game on its initial release may be getting a little tired of the original challenge. Which is where this great expansion disk enters the scene.

Apart from the main game, Civilization 2 contained two smaller games in the forms of scenarios. Those familiar with PC strategy games, or even some of the console conversions, will know the joys scenario modes offer: smaller games based around the original game concept, often with different objectives and goals. They can add many more months playing time on top of the original game. The two original scenarios contained in Civilization 2, revolved around the Roman Empire and World War 2. Conflicts in Civilization offers you 20 more scenarios to choose from!

WHAT'S A SCENARIO?

As the name would suggest, Conflicts in Civilization revolves around war. Many of the scenarios are based on famous wars in history, some are even set in the future! Civilization 2 is a game which pleases both the generals and the peace keepers – if you want to build a race who led the way in science and who employed peace with other nations, you can. You can also be the opposite and try to conquer the world. The new scenarios are all based around conflicts. So those peace keepers among you may feel a little left out.

WAR WHAT IS IT GOOD FOR?

Four different scenarios. Clockwise from top left: The French meet defeat in the Napoleonic Wars; Persian Gulf War; Federal Americans celebrate their civil war; and the very bizarre Cholera of Zeus, help fight the forces of Hades.

Aspects of war: Please your high council, seize cities, and defend well from your enemies.

Best of the net includes THE CHOLERA OF ZEUS, which is very strangely based around Greek mythology. EAST WIND RAIN 1941 – 1945 AD involving the events surrounding Pearl Harbour. Best of all PERSIAN GULF WAR, and yes you can play as Saddam.
HOW TO PICK A FIGHT!

The combat system is very simple: Each unit has a set amount of moves per turn, and each civilization takes it in turns to move their units. To engage in combat, move one of your units onto a square occupied by the enemy. They will now both battle for the possession of that square. Each unit is given firepower, defence and hit points. A unit with greater firepower to the opponent's defence and hit points is likely to win the battle. However there are a number of factors that may change this outcome. A unit being attacked may be in a fortified position, which will increase their defensive score. The terrain the battle is on (such as forest or mountain) can also affect the battle.

MUUCHO SCENARIOS AMigos!

The twenty new scenarios on offer here, provide a wealth of new challenges. 12 have been devised by MicroProse themselves. The other 8 have been labelled 'Best of the Net'. Taken from the internet, these were developed by some real fans of the game. Scenarios spanning ancient history, into the future and even mythical. There really is something to suit everyone.

AEGEAN EMPIRE, c. 650 – 330 BC. The Mediterranean is up for grabs. Who is going to be ruler of the Aegean Sea?

HOORAY! SCENARIOS AMigos!

The French or the English are the best to play as here. New units include Napoleon (of course), Lord Nelson and Wellington.

AGE OF NAPOLEON, c. 1795 – 1815 AD. The French or the English are the best to play as here. New units include Napoleon (of course), Lord Nelson and Wellington.

The Union Jack on this ship means that Lord Nelson is on board. Take good care!

We found Napoleon right at the start of the conflict. Now the French cannot win!

AMERICAN CIVIL WAR, c. 1861 – 1865 AD.

The Federals versus the Confederates. For a greater challenge, try playing as the Kentuckians. New units include Robert E. Lee.

Lots of new units in this scenario. Pictured include the new Ironclads, New Look Engineers, and the River Forts.

THE GREAT WAR, 1914 AD.

World War One. Wilhelm II tries to conquer Europe. Nearly everyone tries to stop him. New units include the Zeppelin and Poison Gas.

WORLD WAR, 1870.

Iranian fanatics invade the U.S. Embassy, taking hostages. The nuclear powers are in a state of readiness. Avoid disaster or implement it?

Playing as the Hodads, we were able to conquer the Earth in seconds. With a Civ score of 98 percent to boot!

The Hodad forces. Eco Engineers, Starfighters and giant mechanical robots. Cool!

ALIEN INVASION, 2: Alien Domination.

The humans take a last stand against the alien Hodad forces. Playing as the humans is the real challenge. All the Hodad units are new. The humans need to develop new units to fight back! By the way Hodad is surfer slang, fact fans!

REVIEWER

Civilization 2 has kept me occupied since its release earlier this year. Now just as players might be getting slightly bored with it along comes the new expansion disk. Conflicts in Civilization makes the original game 20 times better. Each of these scenarios offer a great new challenge with their unique new strategies and goals. The human conflicts are as accurate as possible within the constraints of the Civilization format. The real joy here is the 'What if?' possibility of each scenario. Could you plan better than Napoleon? Or defeat the Federals in the American civil war? Changing the course of history? The futuristic scenarios are a great addition. The amount of new units in these two games could have warranted a separate release. The only negative point I can make is that all these scenarios are based on conflicts. Hopefully a future disc will have scenarios based on trade and peace. If you already love Civilization 2, you won't have to be told to buy this. If you haven't got the original game, go and buy the collectors' box!

A great game has become even bigger and better. If you love strategy buy it! It's that simple.
last month we showed first pictures of this Saturn conversion of Tempest 2000. Now it's ready for review! If your response to that is "So what?" perhaps we'd better re-educate you on what Tempest 2000 is. A powered-up version of Atari's fantastically unique vintage coin-op, it's the work of veteran gaming legend Jeff Minter, and has been the sole - essential - reason to own an Atari Jaguar. More specifically, it's one of the greatest games ever made ever! What we like to refer to as a gaming staple. And with this conversion comes the chance for a whole new arena of gamers to discover its power. Providing, that is, the conversion makes the grade. So, does it?

PART 1: THE GAMEPLAY!

Tempest 2000's primary strength is its super-charged gameplay. At the heart of it all is a simple shoot 'em up - prevent aliens reaching your end of a 3D tunnel - but as with all great blasters it has amazing depth. The drive to get through all 99 levels proves amazingly addictive. And cracking the last highscore is everything!

The first enemy flippers provide little problem - they can't even hurt you upon reaching the top, providing you don't move when shooting.

Mastering control of the 'Claw' is tricky enough to start. Novices find the left and right steering confusing when upside down.

Later baddies like fuseballs electrocute you. Pulsars scuttle lethally around the rim. Demonheads fire off their horns. The tougher they are, the more points they yield.

PART 2: THE GRAPHICS

Arcade Tempest is memorable for its super-stylish vector graphics, thrilling displayed in Quadrascans Color (whatever that was). Rather than losing this trademark look, Jeff Minter boosted it with what he called Mel-O- Vision(TM). Explosions of coloured particles and swirling oily effects do indeed melt all over the screen. This look was designed with the Jaguar hardware in mind, so replicating it on Saturn was never going to be easy. The result closely matches the Jag original, but to a fan's eye there's a lot missing. Less particles and drabber vector frames take some of the mesmerising thrill out of the game's look.

PART 3: THE BONUS STAGE

Gaining access to the bonus stages is THE main fix of Tempest 2000. Completing each one provides a heart-wrenching, gripping chance to skip five levels, but more important is the desire not to leave the level before reaching the chilling 'EXCELLENT' speech at the end. These are the most hypnotic stages ever seen in a video game - at least they were on Jaguar. While still nerve-wracking, the toned-down graphics, duller sound, and low quality prevents the same 'sucked-into-yourself' experience from occurring. And the rewarding speech at the end is weepier too!

REVIEWER

I bought a Jaguar (when they were around £100) solely for Tempest 2000. Excessive perhaps, but it's an incredible game and one which I never expected to see released on any other format.

However, when I saw the preproduction Saturn version last month it looked incredibly promising. Now it's finished though, it still looks only promising. High Voltage have done an admirable job trying to replicate everything, but this is a game that showcased the Jaguar, and on Saturn everything seems diminished.

There's less splatter, particles and showy effects, the music and sound effects are less dynamic, the bonus stages have lost their mesmerising appeal and some of the gameplay is affected - the spikes and fuseballs are amusingly indestructible. My complaints may seem petty, but any Tempest 2000 fan will understand how minutely perfect the Jag version is - it's the tiniest details that make the game as phenomenal as it is. Saturn Tempest 2000 is still a reasonably good game, but Jaguar Tempest 2000 is video game magic.

RATING

An flashy addictive blaster. But for twenty five quid more you can pick up a cheap Jaguar and the 'real' Tempest 2000 - the difference is worth it!
What is this Tempest X? Surely PlayStation owners want a conversion of the acclaimed Jaguar Tempest 2000. Yeh, but why have cotton when you can have silk?

O

n the page to the left you can see Tempest 2000 on Saturn. And at the bottom of that page you can see the score—three. Not a bad score by any means, but surely disappointing for a game universally acclaimed as one of the best ever. A poor conversion perhaps? Or maybe the game was never meant to appear on anything except Jaguar. After all, it was designed for that console's custom hardware. Any other games machine would have to mimmick what the Jaguar does naturally. Unless, the game was redesigned to make use of the other machine's hardware. Yeh, imagine what Tempest 2000 would look like if it had been created for the PlayStation. You've imagined Tempest X!

---

ALL-NEW LEVELS

The new look—obviously inspired High Voltage to tamper with the game design too. New stages, instantly noticeable to the veteran Tempest 2000 fan, scatter the game. Fortunately, they haven't just been mindlessly created. Some are bizarrely interesting, reversing the controls by placing you on the outside edge of the rim. One (shaped like a figure-eight) actually curves inside-out. Very disorienting!

---

A NEW WEAPON

Collecting bonus tubes is the key to power-ups. With Tempest X though, there's an extra power-up to be had even after the Bonus Warp. Collect these, and you get the Mega-Droid. In other words your AI Droid acquires a rapid-fire laser. You don't get it for long though, because with such power you soon clear the level!

---

WHAT OF THE SOUND?

Tempest X's music is the same as Saturn 22000's. Remixes that pale in comparison to the Jag originals. However, this is made up for by all-new sound effects. Some are particularly chilling—such as an egg-cracking noise as two enemies split. It's all pumped up and loud too. One complaint we have of both the Saturn and PS sounds though, is that you can't adjust them mid-game.

---

REVIEWER

When I first saw pictures of Tempest X I was thrilled at the idea of tampering with Jeff Mintor's original. The style of the Jaguar Tempest 2000 is fantastic! However, upon experiencing TX I couldn't help but be dazzled. The new effects are mind-blowing. Not as stylish, but fresh and better-suited to PlayStation. More importantly, the gameplay is still top-notch. It's fast, brilliantly responsive and totally addictive. There are a few niggles—sometimes the graphics are too dazzling to see through (22000's are mad, but always functional), and the remixed music is naff. Also, the tempering to the bonus stages has left them less hypnotic than before. But then Jaguar 22000 is perfect, and even with these defects Tempest X is an exceptional blaster. It's like a '96 dance remix of old rave hardcore classic! I want it!

---

RATING

While some of the monster new effects are tacky and detract from Tempest 2000's perfection, this definitely isn't a step back. A thrillingly fresh rework of a classic!
Sports Games are normally endorsed by a celebrity name. But there isn’t one here. Except of course the name Namco – surely a sign of gaming quality!

A tennis game from Namco? Coming from the creators of Rage Racer and Tekken 2, you’d expect it to be an epic tennis confrontation between two muscular tennis warlords with ridiculous hairstyles – each performing volleys that turn the ball into a dragon-shaped fireball of death. All accompanied by bangin’ techno tunes. And it would be called Rave Court Tennis! But no. As fans of Super NES Smash Tennis know, you couldn’t ask for a cuter tennis game. Cue baby-faced cherubs punting the ball about while elevator music tinkles away. Hey these people invented Pac-Man and Mappy too, you know!

Looks smashing!

PlayStation Smash Court looks very similar to its Super NES counterpart, albeit much more polished. Viewed from the standard pseudo-3D top-down angle first seen in Super Tennis, it’s very bright and cartoonish. Of course, it wouldn’t be a PlayStation title if it didn’t have a few polygons in it. Surprisingly though, the backdrops are flat, but the characters are 3D-generated. There doesn’t seem to be a lot of reason for this, except that they can react to getting hit in various bodily regions – including the nuts, which is accompanied by a comedy tuning fork twang!

Swing that racket!

There are four different types of swing you can execute when whacking the ball in any direction. The Normal Shot fires the ball at standard power and is easy to pull off. The Strong Shot adds more speed. The Lob is good for tucking the ball up into the air when close to the net. However, the Super Shot is the one to master. It’s slow to pull off, so you have to time it very carefully. Succeed though and it powers the ball at incredible speed, complete with a trail!

Performing a Super Serve is exceptionally tough to pull off!

Meet the gang!

Smash Court surely features the most characters of any Namco game (even Tekken 2). There are 24 different players to choose from, or face. Although none seem to have different performance attributes from any other, they all have individual hairstyles, outfits and names. You can face the likes of Carlos, Hideo, Naomi, Nisha or even Boris and Steffi. Although, Boris sports a hairstyle closer to that of Paul Phoenix from Tekken.

The cute-style of the graphics is very similar to the SNES’s. Those people are 3D though!

A selection of cutey Smash Court tennis stars. They feature little details such as being left-or-right handed. That guy on the right has been knocked in the gonads.
In general, Tennis games (or most sports games for that matter) are renowned for having a lack of background variety. After all, what can you do with a tennis court, eh? Well, quite a lot it would seem, if your name is Senor Namco. Smash Court Tennis has ten different tennis courts to play on, each with their own unique look. There are five international Namcourts – Tokyo, USA, France, Australia and England, each resembling their real-life counterparts (England, for example looks a lot like Wimbledon), but with added Namco branding such as Pacman or Mappy on the surface. The other five courts are even more scenic. Set in lovely holiday locations with names like 'I Love Tahiti' and 'Magic Thailand', they even come with hula-hula girls or Royal umpires (on thrones). And there's little comedy touches such as whacking your ball off the cliff into the Aegean sea!

At any time you can go and have a look at your custom court. This is Tom's, it has nothing in it because he's crap!

I've never played the original Super NES Smash Tennis, but by all accounts it's quite good. This pseudo-sequel isn't bad either. The graphics aren't really PlayStation quality, but Namco's style still makes it visually pretty cool. It's the gameplay that's weird though. The timing is bizarre and very unforgiving. When you first play you're lucky if you can serve, let alone return the ball! I reckon a lot of people will have trouble getting to grips with it. With practice though, it does prove itself to be an enjoyable tennis game. The Collection Mode is a nice touch too. The likes of Super Tennis on SNES and Pete Sampras on Mega Drive are far better though. Fun, but there's certainly room for a better PS tennis game than this.

An attractive, entertaining tennis game with some unique new features. But strange timing may make it too frustrating for some people to get into.
What would the Earth be like now if Hitler had never come to power in Germany back in the 1930s? No Nazis. No World War Two. No wonder, then, that shortly after the war a scientist decides to rewrite the history books and travel back in time to 1928, where he discreetly removes Hitler from the space-time continuum before he has a chance to change the world and cause so much suffering.

With Hitler gone, the future should be a peaceful and idyllic place, but the scientist's meddling has unforeseen consequences. With no common foe to unite against, the forces of East and West are thrown together in a massive armed struggle. The Communist dictator, Josef Stalin, plans to conquer Europe and annex the whole continent with Russia to form one world-dominating empire. Standing in his way is an allied force made up of the surviving remnants of the European armies, backed up by an American contingent. With so much at stake, this is a bitter and hard-fought war which still rages in the present day, with devastating modern weapons and incredible new technologies. The Russians have fought their way as far as Germany, and Greece is about to fall. As a senior field commander, you could make the difference between desperate defeat and glorious victory.

The only question is, whose side are you on?

**GOOD GUYS VS BAD GUYS**

At the start of the campaign you get the option of fighting on the side of the Allies - the good guys - or the Russians, who are depicted as baby-eating murderers. The Allied commanders are represented in the FMV clips by two concerned-looking generals and a spunky special operative called Tanya Adams. Meanwhile the Russians are represented by Crazy Joe Stalin, who is apparently knocking off his comely commandantetze while overseeing nerve gas tests on women and children. Of course, missions also differ depending on which side you're on. Russian commanders are ruthless, and most of their time is spent mercilessly stamping out opposing forces and executing any who stand in their way. If you join the Allies, you'll find yourself leading rescue missions or working with other forces to secure a common goal. Both sides also use different technology - the Allies rely on more conventional artillery and airpower while the Russians are developing new electrical superweapons. Also, their armies are organised differently. For example, the Russians don't train any field medics, so their soldiers usually end up fighting to the death.

**MISSION: A BIT TRICKY**

Playing Red Alert isn't just a matter of taking on one samey scenario after another. There are over 40 missions to play out, every one with its own unique plot and objectives, and occasionally you can even select one of two possible missions and thus change your route through the game. Some missions are short sorties, others protracted battles, but in all of them you have to plan your actions carefully. If you're supposed to be blowing up a series of bridges make sure you don't demolish them in the wrong order and trap yourself on the wrong side of a river. If you find an enemy base, try to neutralise its defences by attacking its power plants first. Then maybe you can capture it to use for your own gain. And if you come across captured personnel, try to rescue them and they will assist you.

By way of demonstration, here's the first Allied mission played out. A small force, including special agent Tanya Adams, has to rescue Professor Albert Einstein from captivity in a Russian base. The base is guarded by Tesla coils, which launch deadly charges of electricity at any enemy force that comes within range. Getting past them is going to need some thought.

- Russian troops rush to defend their base, but they're cut down by the Allied infantry and three Ranger scout cars.
- Click and drag to select the whole force and click on their destination. Keep them away from the Tesla coils!
- Shooting fuel barrels set off a massive explosion which destroys a power plant. The Tesla coils are out of action!
- Only two guards remain at their posts as Tanya enters the defenceless base. What can they be guarding?
- With the guards dead, Einstein emerges from the building. Tanya leads him northwards to the landing zone.
- With Russian troops in pursuit, Tanya and Einstein board the Chinook. A naval barrage takes care of the base.
PLAYING BASE

Rather than being simple raids, some missions require you to construct and defend a base of operations, then use that to build a force strong enough to kick the enemy off the map. Every base starts off with a Construction Yard that builds essential structures like an ore refinery and power plant. Once you have these you can move on to more specialised facilities that train troops or build tanks. Everything takes time to construct, although, if you run out of ore your production line will grind to a halt. This pic shows what a typical Allied base looks like in one of the early missions. As the campaign progresses, extra equipment, such as helipads, submarine pens and high-tech weapon installations become available.

FIGHT AMONGST YOURSELVES

Red Alert has several multi-player modes that let you fight it out with other players over an IPX network, a serial link (a cable or a modem - there's a second CD supplied for your opponent if you want to play this way) or the Internet. The serial and Internet games are for two players, but the IPX game lets up to eight people invade each other's territory, form alliances and just, you know, generally compete for world domination.

The Internet game is only available if you're running Windows 95 and already have an Internet connection. The Red Alert CD then installs all the software you need to register your copy of the game and log on to Westwood's game server which has chat rooms and lets you set up battles with whoever else is on-line at the time.

COMMENT

If there's anyone out there who STILL hasn't got into Command & Conquer even after the recent console releases and this new PC version, SORT IT OUT! You're missing out on something really special! Not only is Red Alert brilliant in 1-player mode, with great FMV scenes getting the plot going, but it's one of the best multi-player games ever! With 2-players it's fantastic but it gets even better with more - and the Internet mode gives nearly everyone the chance to try it out! While it may look like an arcade game, anyone can get into it and with time become a master warmonger! C&C: Red Alert is one of the top few games on the PC, and something no-one should miss.

REVIEWER

Last year everyone was banging on about how good Command and Conquer was but I just never got around to playing it. "Strategy game?" I said. "No way! Now I've seen Red Alert, though, I'm of a mind to rummage through the bargain bins to try and find a copy, because it's anything like this it's got to be a work of lovely genius. The storyline is inspired, and I especially liked the way Westwood differentiated between the two forces - one weak but more thoughtful, the other strong but insanely dangerous. It all adds to the drama. The intrigue and the sinister plots that come to light during the campaign and the problem-solving situations that crop up during the missions themselves are all fascinating and help place Red Alert a long way from those horrid snoozathons that used to pass for strategy games. All this, combined with the simple interface, the smart cut-scenes and the non-stop action makes this a game that everyone should try.

PAUL CLARKE

RATING

Away with your outdated prejudices against strategy games! Red Alert is battleground fun at its finest.
RPGs are renowned for being totally immersive and usually very big. *Dark Saviour* is no different. However, this game is meant to appeal not solely to the RPG fan, as it includes an arcade style battle system, as well as a large platforming element. And by mixing these different game-styles Climax have transformed *Dark Saviour* into an even bigger adventure than most RPGs! Get ready for puzzles galore, characters a plenty, and a villain named Bilan as we set sail on the good ship *Dark Saviour*.

**DO RAY ME**

You play Garian a bounty hunter. Having recently captured Bilan - a murderous plant creature - you are now escorting him to Jailers Island. The prison island is home to the Carbon Punishment, a process which freezes its victims. This punishment is what Bilan has been sentenced to. As fate would have it: things do not go according to plan. Bilan manages to escape from his cage, and - true to form - murders nearly everybody on the boat. This is before you even reach the island! So, as Garian, it is up to you to recapture this homicidal villain, before things get really out of hand!

Don warns you of what to expect on the island. Yes, you had better be careful.

Your health is indicated at the top of the screen. As well as your special meter.

Dunbar is a bit of a pushover. Garian meets far stronger opponents later.

At the end of each fight Garian can receive bonus points for specials used.

**HEY BLONDIE! YOU STEENKING PIIIIIG!**

Being on an island full of convicts it’s not surprising that Garian is going to get involved in some fisticuffs. When someone wants to have a fight however, Garian holds a certain ace up his sleeve - being a bounty hunter Garian has the ability to capture his opponents. All the different characters who fight, have different abilities and special super power moves. When Garian gets into later fights he can adopt a previously captured opponent’s abilities. This can come in very handy if you capture a character who is stronger than Garian. The fights themselves are very different to your usual RPG. In *Dark Saviour* bouts are fought very much in the Street Fighter style: One-on-one, best of three rounds affairs. Each fighter has an energy bar, normal moves, blocking moves and “Specials”!
**X-RAY SPECS**

While most of the game's playfield is viewed in an
isometric perspective, occasionally you'll wish you
could choose another angle. Here Climax have been
very clever. The 'Hyperion Perspective' is a device
which allows you to twist the angle of view, basically
meaning you can look around in almost any direction.
This is extremely useful for looking behind objects.
Or when Garian is obscured by an object in the fore-
ground, all you need to do is change the perspec-
tive. By holding the Left shoulder button and
direction pad, you can look around, while the
Right shoulder button allows you to scroll the
view. It's essential that you master this feature,
because you're gonna need it later in the game!

**THERE IS NO TRY!**

Dark Saviour is part RPG, part platformer. A
strange mix that works very well. Most of the
game involves searching for objects to help
you reach different areas, usually this
involves collecting keys to open doors.
Garain appears to be quite the bookworm
however, as there are a number of books and
diaries found in the game. These are very use-
ful, as studying them reveals secrets vital to
Garain's success.

**YOU'VE ONLY GOT ONE LIFE TO LIVE!**

There's only one of Garain. Once he's dead,
that's it! Not every mistake will end up as
Game Over however. This is because as he
progresses through the game he accumu-
lates points. Garain can also pick up extra
points on the black market. Red birds will
sell him points in exchange for chocolate,
magazines and bottles. Sometimes Garain
may miss a jump across a platform, which is
where the points come in handy. Jack, the
bird which accompanies Garain, retrieves
him for 20 points. Garain's usual placed
back at the entrance to the room he was
already in. Of course there are moments
when it is permanent Game Over - like a
very large fall, or being crushed by a boulder!

**I'VE GOT THE FUNNIEST FEELING!**

The opening scenario of escaping from the damaged boat is,
in many ways, the most impor-
tant part of the game -
although you probably won't
realise this at first. This is
because the game employs a
parallel storyline, meaning you
can get five different adventures
based around the same plot.
The damaged ship is integral to
this device, depending on what
you do here will affect what hap-
pens on Jailer's Island. Although
the different parallel's may
employ some of the same lev-
els, you are guaranteed a differ-
ent adventure. There are even
extra locations, different charac-
ters and very differing story-
lines. There are five possible
outcomes of the ship scenario,
when you get to Jailer's Island
the paths widen further. This
means the game has a great
replay value, especially as there
are over 100 different endings!

**REVIEWER**

Dark Saviour is a game whose charms
really do creep up on you. At first the
game may seem very basic, and quite
slow with all of the talking you have to
do. Then without warning, your hooked.
You want to talk to everybody. You want
to visit everywhere. The storyline gets
really interesting, and the twists and
turns of the plot really make you pay
attention. The real discovery to its great-
ness comes when you complete the first
parallel. Here you really discover the
size of the game. If you weren't
already hooked, you will be! The
Hyperion Perspective, although a lit-
tle, glitchy is technically very impres-
sive. More importantly, it works. The puz-
elves if simple to begin with, get progress-
sively harder. If you like your games a lit-
tle different get this. Just remember to
keep the next couple of months free!

**YOU TALKING TO ME?**

Talking to somebody is another
vital strategy for finding clues.
Also keep a lookout for certain
discarded items around the lev-
els - namely chocolate bars! A
lot of the inmates on the island
have very sweet teeths, and will
only help you out if you part
with your sweet bounty.

**RATING**

A stunning game, though you may not realise it at first.
Stick with it, and you will truly discover its delights.
The maddest basketball game ever is taken to the extreme! Hold onto your brains!

**NBA Jam** has become known for its ridiculously over-the-top portrayal of basketball, featuring flaming balls, super dunks, pushing and shoving, and high-speed action! The sequel, with power-ups and high scoring hot-spots on the court added some more features, but kept the game basically the same — now we're onto **NBA Jam Extreme**: the first 3D Jam game! It's still the same type of game, with 2-on-2 mad basketball, only with more of everything!

**EXTREME CLOSEUP!**

The other NBA Jam games all use three buttons — Shoot/Block, Pass/Steal and Turbo. NBA Jam Extreme adds another, cleverly named the "Extreme" button. It works in pretty much the same way as the Turbo button, only with even more over-the-top effects!

- **When the Extreme button is held**, players run extra-fast, with flames coming off their feet!
- **Pressing the Extreme and Steal buttons together** makes the player attempt a diving tackle!
- **Show Off!**
  - There are a few little hidden tricks which can be done during the game to make you look really flash! For example, pressing Pass + Turbo +
  - **When running, you can double-tap either the Turbo or Extreme button** dribble the ball behind your back or through your legs!

**Here come 100 new challengers!**

The first home NBA Jam game featured seven secret characters, made up of various programmers. NBA Jam: TE added loads more, but Extreme features over 100! These range from programmers, through celebrities, to invisible players! There are also plenty of excellent cheats (around 30) which let you change aspects of the game — a big, floaty beach ball; enormous heads; plus loads more!

- **The Happy team includes players such as Mr Happy and Dufus the Clown.**
- **The Invisible team players look like floating clothes!**
In previous NBA Jam games, scoring three dunks in a row would set your player “On Fire!”. In Extreme, players become “Smokin’”, and get covered in flames as well as having infinite Turbo power for a while! You can also become Smokin’ by blocking three shots in a row, and by powering-up both ways you become “Ultimate!”. 

Before each game starts, you get the option of having an enormous head! Gadozinks!

Some of the 30+ new dunks in NBA Jam Extreme are completely ridiculous! For example, one has the player flying straight up the screen, then nose-diving into the basket! With the new 3D graphics engine, the view can zoom out to make everything look even more extreme!

Here, the view zooms out to keep the flying player on the screen! The net bends right down until it’s nearly touching the floor!

I enjoy the NBA Jam games, though I wasn’t all that keen on the new features of the last one – NBA Jam: Tournament Edition. I get the original version out every now and then for 4-player games, but that’s just been replaced with Extreme! Everything that was fun about the old games has been enhanced here: bigger heads, more characters, faster gameplay, more over-the-top dunks, more stupid quotes, and stupid 3D graphics. It’s lots of fun in multi-player mode, and with a memory card you can save your records from each game, giving you something to work on. It’s more of a fun party game which will be played a few times a week than something you’ll play non-stop – but if you’re likely to get multi-player games going regularly, it’s well worth getting.

MARV’S IN THE HOUSE

The old voice of NBA Jam has gone, only to be replaced with “real” NBA commentator – Marv Albert! He’s also done the commentary for a few other video games, including Sega’s NHL All-Stars and NBA Action on the Saturn. As an added bonus, Marv is included in one of the secret celebrity teams in NBA Jam Extreme, so you can now play as everyone’s colourful hero!

By switching through all of the Chicago Bulls players, Dennis Rodman’s hair will change colour each time! Just like the real thing!

A great upgrade of the NBA Jam series, and a lot of fun in multi-player mode. It’s not so hot with only one person, however. Get some friends.
Blood, blood glorious blood. Nothing quite like it for selling a game. So come play Reloaded, you’ll be blood soak-ed, just don’t forget to bring some nice soap.

Loaded was a big hit of last year. So not surprisingly here comes the inevitable sequel. Rather than just ‘tweak’ the original, Gremlin have redesigned the whole game. Gone is F.U.B the Fat Ugly Boy of the prequel. In his place is C.H.E.B - Charming Handsome Erudite B*****d! The story goes that F.U.B's brain pod managed to escape before his defeat. This brain pod has been undergoing it’s very own star trek, looking for a new host body. Eventually the pod finds a host, on a desolate planet populated by artists and hippies. Now in the body of a former artist, C.H.E.B is born. Yes, he wants world domination. Who wouldn’t?

In the original Loaded the lunatics were taking over the asylum. They eventually broke free, although not all of them made the journey to the sequel. All the old characters have undergone a bit of a facelift, courtesy of 2000AD artist Jason Brashill. Sadly missing is Vox, the very voluptuous babe from the first game. Apparently she has started a career in glamour photography. There are two new characters to make amends for her departure.

They don’t really want to be ‘free’ they want to be three, or 3D to be more precise. Rendered as well, and in full FMV glory. They can’t be like this in the game. Compromises have to be made, but in the intro sequence the 6 characters can be all that they want! You too can marvel in their magical make over. These sequences may be short, but they sure are special.
**TURN THE BEAT AROUND**

Loaded was criticised for being more than a bit repetitive. All you had to do was collect various coloured keys on each level. The keys collected in order would allow you to reach other areas within the maze-like level, until you reached the exit. Gremlin have put their thinking caps on, and changed the game play – to a certain extent. Now each mission (they’re no longer levels) has you collecting different objects. Yes it’s still a little similar, but where the original Loaded all took place in the asylum, Reloaded’s missions are all over the place, taking in such exotic locations as the hippy planet, military installations and city rooftops.

The first mission involves collecting green maggots for a hippy. Collect enough and he will build you a bridge to the next level. If his guitar annoys you, shoot him!

**I KNOW NOW WHY YOU CRY**

Another major change is the opportunity to befriend the enemy. Yes, you heard right. Gremlin apparently had a change of heart while creating the game, deciding that mindless killing was, well mindless. So now if you pay attention to the enemy before killing them, you might just hear their cries for help. Upon finding such softies you can now chat to them. Some will talk tripe, so don’t pack away your weapon too quickly. Others reveal clues on how to complete the level. So now Reloaded contains an all important lesson. Who said video games don’t teach you anything?

**REVIEWER**

I wasn’t a huge fan of the original Loaded. Yes the graphics looked nice at the time, but the game play was just too boring. Gremlin have to be congratulated for trying to reinvent the game. Unfortunately not all is rosie. The clarity and animation of the main characters is appalling, no excuses. If the game play was great, admittedly this wouldn’t matter. It isn’t great however, and is surprisingly similar to the original. In many ways worse. All I can think of when playing the game is “it’s not finished yet”. Possibly the game was rushed to reach the shops in time for Christmas? Even the Pop Will Eat itself tones of the original are gone, and the new tracks don’t really create much excitement. This could have been, should have been, much, much better. I’m sorry Gremlin but you’ve let a lot of people down.

**RATING**

May please the psycho fans of the original, but there’s nothing new here to appeal to everybody else. Just like the original it’s too laborious.

ALEX MONTALBA
The PlayStation has seen more than its fair share of basketball games already, and over the next few months that number is going to double! The reigning champ on Sony's console has to be NBA: In the Zone. Sure Total NBA looked gorgeous, but those who know their sims favoured Konami's earlier effort. Now, as with all good sports sims, comes the update – the imagistically titled NBA In the Zone 2! Much has changed, especially the graphics. With a host of major new features it looks like Konami could still be the Champions – for another couple of months at least.

IT'S ALIVE!!!
In the Zone 2 allows you to be just like Dr. Frankenstein and create new life! Well to be more precise new players. You get to choose the basic shape of the new player. So, do you go for major height to create an excellent centre man? Or perhaps go for a smaller model which should produce a better dribbler. The choice is yours. You can then give your creation a name, as well as assign him a shirt number.

WHAT NO DREAM TEAM!
Only the official NBA teams are included in the game. Unfortunately there are no special teams. No all-star teams, and definitely no dream team. Never fear, for the player trade is here. Just trade whatever players you like into your favourite team and voila, your own dream team. Also for other legal reasons, some of the bigger players in the game are not accounted for. Namely Michael Jordan and Shaquille O'Neal. If you can't live without these players simply go to 'Create', pick a shape, and assign them the correct number. Great.

GOD BLESS AMERICA
By far the most original feature of ITZ 2 is the option to view the national anthems being sung. We know anthems have been included in games before, but believe us they've never been this entertaining. At the start of the game a performer walks onto the court, takes to the microphone, then belts their lungs out. The 'Star Spangled Banner' whips the audience up into a frenzy!

At the end of the song the crowd cheer wildly and then its game on! There are three different singers one large male, and two females.

The camera sweeps around as the performer goes through the motions. In the background players stand with their heads bowed, the more rebellious players don't!
alley-oop and fade away

the variety of moves and plays in n72 are really impressive. the three main buttons you use are pass, shoot and action. the action button allows you to perform advanced techniques, depending on what position your player is in. spin moves, fake passes, power drives to the basket all are at your disposal, as well as many more. you can also call players to screen for you, or to change formation. in defence you can opt for a full court press or to double team the opposition's star players.

look it's wossiss name

the biggest improvement for n72 over its predecessor has to be the graphics. the programmers seem to have gone for the jugular of those total nba guys, as they've stolen a lot of their tricks. as in total, n72 now features reflections of the players on the polished surface of the court. but the best feature about these graphics is the way these virtual players look like. close to their real-life counterparts. yep, these players have textured faces. although some look more like picasso paintings than humans.

reviewer

basketball games are often criticised for being great to look at, but a little boring to play. the trouble being the nature of the game itself - admittedly it is repetitive. if you're a fan this criticism doesn't mean diddly, and with in the zone 2 you're going to find yourself in seventh heaven. this game goes for realism, and to a certain degree does pull it off. the wealth of moves and plays is the most comprehensive i've ever seen. that fact alone should make you realise the potential of this game. the only criticism i have is that at times you don't quite feel in control of the players. for example a player who you want to pass will suddenly try a three pointer - usually missing! however if you stick with the game this problem becomes less apparent. hats off to konami, as they've improved on the already great original. if you love basketball, get this.

rating

a great game of basketball with bags of american patriotism thrown in. guaranteed to please the pants off the serious basketball fan.
So why get a license from beyond the grave? That's what everyone is gonna be asking right? We spoke to the great man himself through a psychic friend (well actually the instruction manual), and here's what he had to say.

"For kids, go-cart racing is the best teacher in their life. It's a safe, healthy, genuine sport that helps them cultivate their pioneering spirit. I believe these young go-cart racers will grow up to be future Formula One champs."

We're convinced. Let's go-cart!

---

**BEEN THERE, DONE THAT!**

So why should you want another racing game? You've mastered your Formula 1, Rallyed yourself to death. You've even tried 4x4 and Micro Machines! What's next? The challenge that is go-cart. Go-carts are a different kind of racer altogether. It's a lot more basic. There are no high performance turbocharged mothers on offer here. Instead everyone is driving the same class of kart, and the result of the race relies on pure driving skill. To qualify for the next race you must finish first. Nothing less will do. Here winning is everything!

---

**PREPARE TO QUALIFY!**

Before each race you must complete a qualifying lap. The time of this lap will determine your place on the starting grid. Don't fret even if you place twelfth. It's still very easy to be in the lead before the first bend! There are three classes of kart to compete in. Each class is divided into three separate races on increasingly difficult circuits. Move up a class and you'll be driving a more powerful kart, and facing fiercer opponents.

---

**WATCH YOUR BEHIND!**

That's the annoying cry the ingame announcer says as someone is approaching your rear. There's an over-your-shoulder perspective to view what's happening behind, useful for blocking other drivers. There are also four other perspectives to choose from. The most impressive for conveying speed is the driver's perspective, where all you can see is the road. The other three all have the kart visible, with slight variations to allow different views of the track.

**This is where you're racing. Make a quick note of the weather.**

**Choose your tyres. Wet or dry. Hmmm, let me think for a while.**

**Now pick yourself a ride. This yellow one is the best all-rounder.**

**Only twelfth on the starting grid. Better be quicker next time!**

**The red arrow indicates a difficult corner. Looks like a hair-pin!**

**Still on the first lap and already in sixth place. This race is ours!**

---

**When you hit high revs it sounds like a hair dryer!**

**Rear view! Red number two is creeping up on you. Brake into his rear to make him leave you alone.**
For the complete go-kart beginner Sunsoft have included a practice mode. They even recommend you try karting for real! The reason for this being the kart movements are based on real kart data, and the courses you race on are real go-kart circuits. In the beginner's mode you're racing against the clock, just like the time trial. Here however you cannot crash the kart. Also on offer are proper time trials where you can select the course and kart you desire, and best of all a two-player race option. You need to link-up for this though.

The blue arrow indicates an easy corner.

You can even pick the colour of your kart!

This is the view from the bonnet. It's fast.

AYRTON SENNA MEMORIAL
Included in the game is this memorial to Ayrton Senna. Here you can view photos from Senna's private collection. A nice tribute to one of the greatest racing drivers. Also included are the complete statistics of his Formula 1 career. Here you can see how amazing he really was.

There's Ayrton and another of his crashed cars. Tsk Tsk!

TELL ME NO SECRETS
Finish all nine courses in first position and you are whisked away to an extra special circuit. A one-on-one race against Ayrton Senna on his own private course. This race consists of five laps and you have to be a real expert to win here. If you do, another secret is revealed. Two words: Hyper Power!

AYRTON SENNA
LENGTH: 540m
MAX ST: 90...

This is Ayrton's private course. It's scary racing against the ghost rider.

REVIEWER
This game came as a real surprise. Yes it's not the prettiest racer to look at, and it is very basic. At its core however is a real blood and guts karting sim. One which is extremely playable. This isn't the most challenging game in the world however. If it was it would have scored higher. Younger players will find the learning curve just right, while expert players are advised to stay away. If you're fed up with flashy racing games with turbo boosts and weapons, and instead want to try something a little bit more down to Earth. Here's your game.

Ayton Senna

A very playable go-karting game that is perfectly suited to younger racing fans.
Killer Instinct Gold

The first part of this review needs only to say that all Killer Instinct fans should buy Killer Instinct Gold straight away. With everything from the arcade game (except for quite a lot of animation frames) plus lots more, it's essential to those who already like KI. My favourite feature of SNES Killer Instinct was the training mode, and KI Gold has some of the best training features yet - even rewarding those who master it with new costumes. As a fighting game, KI Gold doesn't flow very well at all - each fight is a series of attempted enormous combos, breaking the whole thing up. Standard moves, even fireballs are very rarely needed, meaning that it takes quite a bit of practice before you can do a decent combo in a fight. The main character graphics aren't too hot - missing animation from the arcade, with the Nintendo 64's strange fuzzy anti-aliasing effect making the fighters look a bit rough when the view zooms in close, but the 3D backgrounds are excellent - a lot better than the arcade version. Overall, Killer Instinct Gold certainly isn't a game for anyone less than a big fighting game fan, and a fighting game fan with patience at that.

Ed Lomas

Cruisin' USA

With our PlayStation half-melted after exhaustive Rage Racer sessions, Cruisin' USA has a lot to prove. And it has proved that a great machine is capable of supporting poor software. From beginning to end, in almost every respect, Cruisin' USA is a mistake for N64. The only redeeming feature is that it closely resembles the look and gameplay of the arcade game - which isn't great. Cruisin' comes across as a poorly revised version of the classic Outrun, minus the great tunes and thrills. I haven't heard much bad about the car physics and it's hard staying awake through the 14 tedious stretches of US highway. It is so boring. Control with the analog stick is good. The two-player mode isn't bad. But no-one here finds Cruisin' fun at all.

Paul Davies

Doom

Doom is one of the best games ever, and one which revolutionised computer gaming. The Saturn version, however, stinks. The biggest problem is that the frame rate is ridiculously low - almost entirely locking up at times, making the game slow, jerky, and nearly impossible to play. Also, this is a translation of the PS version, meaning that the Saturn is attempting to do the fancy coloured lighting and translucency effects, which it does terribly - blocky meshes which slow the "action" down even more. And to prove that this is a basic port of the PS game, just try using the PS passwords - they all work! Even more annoying is the way the game was rushed out before Christmas, with high-resolution PC Doom screen shots on the packaging! There's NO excuse! One of the greatest games of all time has been destroyed, and everyone involved with this version should be shot.

Ed Lomas
WWF IN YOUR HOUSE

WWF in Your House is based on the WWF (World Wrestling Federation) coin-op which was released last year. Somehow, the graphics have gone drastically downhill from the original PS version, and the fighters look as though they've been digitised from a poor quality video - they're all fuzzy and jerky. The backgrounds are now more varied, as each wrestler has their own arena, but they all look rubbish as well, with comedy digitised spectators to add to the mess. There are now power-ups in the ring, and there are a few new fighters (including the Ultimate Warrior) but the overall game is a lot less impressive than the first, and doesn't have the novelty of being a Midway coin-op conversion. Unfortunately, even though it's funny, it stinks.

ED LOMAS

SLAM TILT

Pinball games really are a mixed bunch. They are usually bad or worse. Occasionally you'll find a nice one. Slam Tilt falls into the latter category. It's pretty good. Four tables are on offer. Mean Machines - a car-based table. The Pirate - based around pirates, dairies, Age of Space - science fiction related adventures, and Night of the Demon - a horror themed table. Only one of these tables is too easy, with the Pirate being the most fun. The logic of the pinball itself is very good. Bouncing off bumpers at the right angles and speed. Four tables might not seem a lot, especially with titles like Pinball Construction Kit doing the rounds. But these tables are fairly imaginative, and accurately convey the quality of the modern pinball table. This means you get all those fancy little dot-matrix displayed sub-games. One final point, the metallic clang the ball makes is really excellent. If you like pinball, you'll enjoy this.

ALEX HUHTALA

IRON AND BLOOD

The title is quite a mouthful - Advanced Dungeons & Dragons: Iron & Blood - Warriors of Ravnwood. It's also a decent 'beat 'em up. Lesser meaning there are a lot of better fighters on the market. It's the old story of good versus evil. Or here and versus chaos. What Iron & Blood does offer is a game full of differences. The presentation throughout is clever, eg, your fighter's life force is represented by a burning flame. There are 16 fighters to choose from. Being a D&D game, there are guys with big swords, goblins and dwarves to choose from. What is neat is the ability to improve your fighter through experience, and the gaining of artifacts. These artifacts improve your character's magical powers, giving the game a little RPG appeal. This game may look unappealing at first, but give it time and there is some fun to be had. Not the best beat 'em up around, but not bad either.

ALEX HUHTALA

VICTORY BOXING 97

Victory Boxing was released a year ago on Saturn, and was praised for being one of the best boxing games yet - slow to begin with, but fun and tactical with a bit of play. The PlayStation version has improved graphics, with shaded and textured players, as well as a few other new features. You now get to create a gym in which you can save eight of your made fighters (each gym takes up one card slot), and you have to promote to organise fights for you. The control system doesn't work quite as well on the PlayStation pad as it did on the Saturn, but the improved speed and new features (including being able to take your boxer to a friend's house for a fight) make it better overall. The best boxing game around, and a lot of fun.

ED LOMAS
BECOME VIRTUAL-ON POSITIVE...
WITH THIS GUIDE TO VIRTUALOID MASTERY!

It scored a High Five last month. If that’s not enough to make you want this game, perhaps the survival of your home planet might influence you.

Contrary to what you may think, Virtual On is not a game. We thought it was about time you knew — it’s a test. The DN organisation on Earth has discovered an advanced ancient technology and used it to construct the Virtualoid (VR) cyber troopers. However, these robots can only be effectively controlled by people who are Virtual On Positive. To locate such people, DN has made the video game Virtual On. Unknown to them, players are hooked up to the real VRs on the moon! However, the central computer at the VR factory has become conscious and targeted the most destructive weapon ever made — the Sun Cannon — at Earth! Quick to react, DN have ordered the destruction of the moonbase. Their satellite link-up activated, VO+ players are now unwitting volunteers in this desperate conflict. The world is in peril. Read this guide, Become Virtual On Positive. Save Earth!

CROUCHING
Not a common move, but can be useful. Hitting GUARD and an attack drops your VR to their knees. Sometimes useful for avoiding a close-combat attack.

BEAM RIFLE
An effective harassment weapon when used standing, walking or crouching. Side-dashing fires four weak shots, but if they connect they floor your foe. Forward-dashing produces two faster, more powerful shots. Temjin’s rifle shots can be accurately timed even when dashing. However, beware of a long recovery time following a dash. When getting up, side dash for a more powerful shot than normal.

BOMB
IMPORTANT NOTE! All VRs’ blast weapons are best used as defence shields. The blast radius can absorb all beam weapons (even Raiden’s laser which although still visible, does no damage). Your own weapons however, can pass through a shield — so effectively it’s a one-way screen. Note though, an enemy inside the blast cloud can shoot unhindered. Also, enemy bomb blasts can co-exist with your own. Temjin’s bomb is really only useful as a shield.

BEAM SWORD
This is primarily a close combat weapon. It can be used to slash an opponent before they stop dashing — great for when they hit a wall in mid-dash. It’s faster to execute the beam sword than other weapons, making it useful for shortening recovery time after a dash. Close-up it never runs out of ammo, but at a distance, it fires a weak beam cutter shot — useful for absorbing enemy shots, but depletes after two or three repetitive blasts.

GLIDING RAM
A unique attack, only possible when all weapons are fully charged. It’s as powerful as the most potent in the game (Apharum’s tongfer, Raiden’s laser, Viper’s Super Dive). To activate, leap up, push forward and hit your Special Weapon to send Temjin slicing across the screen. If it misses, your weapons are seriously depleted (except the rifle). It’s difficult to make this attack connect (unless an opponent is recovering), but is an impressive finishing move!

BEAM SWIFT!
On the next six pages, you’ll find data on the handling of each Virtualoid. Read it carefully to best select the VR for you. First though, you may need to know these simple techniques in your quest to become VO+.

DASH CANCELLING
Dashing finishes with a moment of vulnerability. Avoid this by dash-cancelling — hitting DASH and pushing in the opposite direction. Note though, if you use a weapon during a dash, you cannot dash cancel.

DASHING
Hitting guard cancels a jump, cutting recovery time. You must cancel before reaching the apex of a jump (look for when your boosters cut out). Aerial attacks forfeit cancelling ability, although Bal-Bas lands quicker if he shoots instead of cancelling.

A forward-dash rifle shot. An excellent attack!

HOW TO READ THE TABLE
The first number in each category is the number of directions the weapon is fired. The second number is how many shots are fired. The letter is a damage rating (A being best). Learn your VR’s strongest attacks!
**VULCAN**

Not a powerful shot, but it can be used to annoy an opponent into a stupid response. The side-dash attack is too weak to justify the incurred recovery time. Forward-dashing releases a long stream of shot, but it's a risky move. Back-dashing is totally ineffectual. An aerial Vulcan is fast, but still weak. The crouch shot is good, because there's no recovery time so you can blend immediately into another shot.

**7-WAY MISSILE**

They're slow and don't home in too well, but it's a strong attack. Good close up as it's difficult to avoid. Use it to make the enemy dodge and follow-up with the homing beam. Side-dashing gives it partial upward velocity — best launched at a distance. It's a great forward dash attack — catch the opponent recovering and you can nail 'em with all seven shots. If the dash sends you past them, Viper turns to hit them by the third shot. Not a good back dash attack and the aerial attack is too easy to avoid.

**SUPER DIVE**

Viper's unique special attack and another contender for most powerful move in the game. Again it can only be performed with full ammo. When in the air, push forward and hit the special button. Viper charges down like a streaking comet, with the potential to cause spinning damage. Make sure you're confident of making this move connect, as you suffer pretty poor recovery time when you land. Worse still, your weapons are all severely drained, leaving Viper seriously vulnerable.

**HOMING BEAM**

Viper's most powerful weapon! The standing beam allows you to immediately follow with a dash. However, the walking beam (though visually identical) doesn't. Side-dashing is good for catching descending opponents, after avoiding their aerial shot. All these beams have upward velocity making them extremely practical for launching when hiding behind an obstacle. The forward-dash beam fires straight ahead, however, making it a good attack to use when close-up.

**The side-dash Vulcan. You get a fair smattering of shots, but they're weak. Good for eating away at your foe's energy though.**

---

**DORKAS**

A heavily-armoured VR which is super tough to knock down. Armed with deadly weapons, Dorkas is best applied to mid-range attacks.

**FIREBALL**

Has reasonable homing ability and cannot be stopped by most beam weapons. However, beam weapons also pass through it, so it isn't a defense weapon. The fireball doesn't run out of ammo, but there is a delay after firing. Effective when forward-dashing, thanks to Dorkas' good aim rotation. Sid-dash attacks are smaller and less powerful, but good for wearing down your opponent. Back dash and air attack are rubbish.

**HAMMER**

Very effective. When standing, it arcs over obstacles, reaches across the whole area, and can loop back to hit your opponent on its return. Takes a long time to recharge though. Best used when just standing — point in the right direction and fire. It's weaker when dashing. Forward-dashing gives it less homing power than when standing, less upward trajectory too (making it good close-up), and it's faster. Less effective when side-dashing and useless when back-dashing.

**PHALANX**

Comes in two distinct forms — aerial missiles that explode on the ground, and napalm bombs that explode out in lines. The Phalanx can be used effectively as a shield. It's limited when you're standing, as you're immobile (best used for catching floored opponents). At its best when forward-dashing, with a good chance of hitting. Side and back dashing attacks are okay. However, it's also slow in the air, and useless when crouching (it doesn't even explode!)

**CLOSE COMBAT**

Dorkas is very poor close-up. The right arm has the longest range, but is too slow in action. Too often you can close-combat attack instead of firing a projectile (cancel it by guarding or jumping). The left arm (hammer) needs to be too close, meaning you normally waste projectile ammo when you want to swipe. Surprisingly, the Phalanx is best! It isn't a close-combat weapon at all, but connecting with the lob hurts an opponent and you duck at the same time.
BELGDOR

One bulky VR Belgdor specialises in long-range attacks. However, the huge launchers on his shoulders make him extremely top-heavy, and therefore very easy to knock down. Belgdor is a very slow VR with a short dash. And surprisingly for a big VR, his armour is quite weak!

GRENADERS

Do little damage individually. However, during a dash they launch in a line. Grenades don’t home-in, but do head for the enemy’s current location. Good when standing-launched to keep your opponent on the move. When dashing, head for the estimated point of your enemies dash-freeze and launch. Using in a dash completely depletes them. Crouch when back-dashing, poor in the air. No upward trajectory when crouching.

NAPALM

Very effective! Napalm can pass through obstacles and enemy bomb blasts. And there’s little freeze-time between shots. Best used when standing. To prevent an opponent noticing the slow launch, keep them on the move with grenades and then launch the napalm. It’s not very effective when dashing – there’s no even spread and too hard to aim. Air napalm isn’t great either – it is too easy to avoid.

HOMING MISSILE

Fast and can almost turn a complete semi-circle! You don’t even need a lock to track an enemy. Standing launch takes time, so get behind cover first (being tall you can clear obstacles). When forward dashing there’s no upward arc and it’s faster. Two pairs are fired, the second set has a wider rotational arc. Too slow when back-dashing. When crouching they launch straight up, coming down near vertically, perfect for surprising shielded foes.

CLOSE COMBAT

Belgdor is powerful but extremely slow close-up, with a short moving range. DI’s difficult to get a hit in, but totally worth it if you do. Just be prepared to jump or dash to escape if things get a bit hairy. You can be of course guard. Definitely avoid facing super-strong close-combat technicians like Aphantor or Temjin. They can demolish Belgdor’s weak armour. If they get in close, get away quickly!

BALBAS-BOW

With a slow dash and weak armour, he’s one of the hardest roids to learn. A lot of the strategy involves aerial tactics. Here, shooting while jumping makes for a quicker descent than jump-cancelling (fire even with no weapons!). Note though, that aerial VRs (Viper being one too) cannot leap over an opponent!

RING LASER

Good for absorbing shots. One ring absorbs one enemy shot, but a continuous stream is a waste of ammo, more so because of the slow recharge rate. Walking sideways is a good as a defensive spread shot. Don’t overdo it though, because if you run out, he’s too slow to dash-escape. Forward-dashing produces a rubbishy three shots. Side-dashing is a tough to take technique! The back dash is an okay, but air and crouch attacks are poor.

FLOATING MINE

Slow, but with excellent homing capabilities – can change direction twice! You never run out of ammo too. Best when walking side-to-side – continuously launching to pile on the pressure. Can fire over shorter obstacles. Slightly faster when forward dashing. Side-dash isn’t recommended, because mines are released at together and are easy to avoid. Back dash is too slow. Aerial shots are good, due to staggered launch times. Crouch attacks are fast, but don’t home.

HAND BIT

For the most part, this isn’t a tough weapon. When the arms detach, your left and right weapons also become unusable, plus you cannot block. Catching a foe when their recovering makes for a definite knockdown, but the timing has to be critical. Even more so when dashing, then when standing. When back-dashing the hands fire rings (not recommended). The crouch attack too is poor – it just fires mines and has no homing power.

SATELLITE LASER

The aerial hand-bit attack is definitely the deadliest! Known as the Satellite Laser, the hands launch into the air, and fire a beam from one to the other, channeling the power toward the target in eight lethal blasts! It’s near impossible to retaliate while being attacked by this and forces your opponent to dash. They can avoid all eight hits though with two precise dashes (remember to time by dash-cancelling before the end of a dash!)

CLOSE COMBAT

Not recommended for Balbas-Bow. The two unusual weapons are like a flame-thrower and a giant laser claw. Although impressive to look at, they do little damage and aren’t knockdown moves. Plus, with his weak armour it’s a deadly situation. Can confuse an opponent though. But for the most part, AVOID close-combat by jumping.

PLAYERS GUIDE

He looks bizarre and plays bizarrely. One of the least popular VR Troopers in the arcades.

Side-dash Ring Laser. Provides good defensive coverage and is a good attack too.

The big flame close-up weapon. All show with no go, however, as it does relatively little damage. Stay out of close combat.

BELGDOR

Do little damage individually. However, during a dash they launch in a line. Grenades don’t home-in, but do head for the enemy’s current location. Good when standing-launched to keep your opponent on the move. When dashing, head for the estimated point of your enemies dash-freeze and launch. Using in a dash completely depletes them. Crouch when back-dashing, poor in the air. No upward trajectory when crouching.

NAPALM

Very effective! Napalm can pass through obstacles and enemy bomb blasts. And there’s little freeze-time between shots. Best used when standing. To prevent an opponent noticing the slow launch, keep them on the move with grenades and then launch the napalm. It’s not very effective when dashing – there’s no even spread and too hard to aim. Air napalm isn’t great either – it is too easy to avoid.

HOMING MISSILE

Fast and can almost turn a complete semi-circle! You don’t even need a lock to track an enemy. Standing launch takes time, so get behind cover first (being tall you can clear obstacles). When forward dashing there’s no upward arc and it’s faster. Two pairs are fired, the second set has a wider rotational arc. Too slow when back-dashing. When crouching they launch straight up, coming down near vertically, perfect for surprising shielded foes.

CLOSE COMBAT

Belgdor is powerful but extremely slow close-up, with a short moving range. DI’s difficult to get a hit in, but totally worth it if you do. Just be prepared to jump or dash to escape if things get a bit hairy. You can be of course guard. Definitely avoid facing super-strong close-combat technicians like Aphantor or Temjin. They can demolish Belgdor’s weak armour. If they get in close, get away quickly!

PLAYERS GUIDE

He looks bizarre and plays bizarrely. One of the least popular VR Troopers in the arcades.

Side-dash Ring Laser. Provides good defensive coverage and is a good attack too.

The big flame close-up weapon. All show with no go, however, as it does relatively little damage. Stay out of close combat.
**APHARMID**

Apharmid is a versatile weapon with a wide range of attack options. With tough armour and speed on his side, he's designed for face-to-face combat.

**SHOTGUN**
Powerful at close range, but pathetic at a distance. Apharmid’s movement is very quick, allowing him to avoid most attacks. He’s slightly vulnerable to aerial foes, but his speed helps him out.

**BOMB**
A bomb in bomb mode for more details. It’s a deadly weapon – use it wisely.

**TONGFER**
Without a doubt, Apharmid’s best weapon. Performs a deadly slice when close up! Be careful of missing though, as Apharmid doesn’t turn much. They’re fully intended for close-combat – get one hit and you’ll be done for.

**HAND BEAM**
Don’t fire off small bursts. Keep finger on trigger otherwise it stutters. Good when standing or walking – weak, but fires a continuous chain. Effective against heavier enemies, keeping them on the run. Even faster enemies can be caught during their recovery periods. Her fast walk also means she can walk backwards, shooting and pushing enemies into corners. Except when crouching, all hand beam shots fire straight. This weapon will allow you to keep your distance.

**HEART BEAM**
This weapon is of little use before Fei-Yen goes hyper. It’s quite slow and signals its arrival with a warpy sound. It also has a particularly poor homing ability. Proves much more potent when Hyper, however when standing the Hyper Heart beam is useless. More experienced players will know you’re temporarily invulnerable to the attack coming. Avoid the blast and wait to catch you after it's passed. When side-dashing or standing, the beam arcs, giving you the chance to launch from cover.

**BOW GUN**
A reasonably effective weapon, and certainly better to use than the Heart Beam before going hyper. It’s much improved when Hyper, launching larger shots with much quicker reload time. Still tough to make connect though.

---

**FEI-YEN**

Super-fast and surprisingly powerful. Designed to hit and run. She has near zero recovery time after a dash (more so with hand-beam). Also, timing for dash attacks is always late – however, this is a good thing. If you dash fire exactly with your opponent chance is you’ll catch them when they hit. She’s also less hampered by walls than other VFs, following the curve when dashing.

**NORMAL MODE**

- **BOW GUN**: 1/1/0
- **HEART BEAM**: 1/1/0
- **HAND BEAM**: 1/1/0

**HYPER MODE**

- **BOW GUN**: 1/1/0
- **HEART BEAM**: 1/1/1
- **HAND BEAM**: 1/1/0

---

When Fei-Yen has around a third of her energy left, she goes into Hyper Mode, with increased power. It might not seem that significant on the chart, but what isn’t shown is that hand beam homing ability is vastly improved – it’s an instant knockdown move with fast recharge. All the other weapons are powered-up to a degree also.
**BAZOOKA**
Rarely runs out of ammo and can be fired again after a second. The rounds travel slowly and do serious damage. Rapid-tapping is needed to continuously shoot. The tool dash is very good – 180 degree rotation allows you to zoom past foes, turn and shoot back. Side dash is not so good – more shots, but a third weaker. Also, it drains your weapon's energy. Back dash and aerial shot is poor.

**GROUND BOMB**
The poorest of Raiden's weapons. When launched low, it travels very slowly. The blast can be used as a shield, but it's tricky, as it's small and settles quickly. Being his weakest weapon, you can use it to waste your opponent out of cover.

**LASER**
Awesome! However, it leaves you vulnerable and needs a long recharge. Devastating when standing, but needs manual aiming. Use at mid-range or less for best chance of hitting. Useful when forward dashing – 2 3-way beams – and to connect thanks to 180 degree rotation. Potent when side-dashing, but harder to make hit. Avoid back-dash. Powerful in the air, but easy to avoid.

**CLOSE COMBAT**
Not a recommended tactic because Raiden is just too slow. If you're caught in close-combat lock, press either of the LR triggers to spin Raiden around, auto-tracking him, then use the crouch laser to avoid the enemy attack and get a powerful hit in at the same time! Otherwise dash away and launch a full-scale distance laser at your enemy while they're still swiping.

---

**JAGUARANDI**

If you average more than 35 seconds per round in the first five stages, you have to face Jaguarandi in the 'Penalty Stage'. Unlike the other VRs, Jaguarandi is not a real robot, but a simulacrum – a physical hologram. When the DN corporation were creating the Virtual On coin-op, they tested it using a young VO+ whizkid. His combat records were stored in the simulator's memory banks and have been used to create this hyper-powered virturoid. Jaguarandi behaves in an unusual way. For a start he mimics the colour of his opponent. Secondly, every time you lose and continue the game, he reappears smaller, until after three goes he's a midget! Whether you face Jaguarandi or not, this is the point where your training ends. You are now VO+ and must face the real-time challenge on the moon!

**HOW TO DEFEAT HIM!**
Jaguarandi's three weapons are a bazooka, 4-way missile and 10-way laser. The bazooka is extremely potent and fast. Three hits and even the most powerful VR is destroyed. However, it has poor homing ability. Fast rods can walk to the enemy, heavier rods have to dash. But don't dash-attack or Jaguar can get you while you're recovering. With the 4-way missile, position yourself between the missiles. If you stand directly in front when he launches, they won't hit. You can jump to avoid them too. Avoiding the 10-way laser is similar. Stand between the beams. When Jaguarandi is facing you between 100-300m he goes berserk, rapidly switching between missiles and lasers!
**CHEATS**

**CHANGE THE COLOUR OF YOUR VIRTUAL ARoid!**
Pressing Left Shift on the game select title screen puts your Roids in their second colour suits. You even get second-colour continue screens too!

**DIFFERENT VIEWS**
Pushing X, Y and Z together at any time in a fight switches between three different views. Aside from the normal view, there's an aerial and side-on camera. Novel, but not practical.

**HOW TO BECOME HIM!**
You can actually play as Jaguardandt! One way is to finish the game in hard mode. For the Virtual On Negative among you, there's an easier method. On the Start Screen hold DOWN and press both SHIFT buttons at the same time. A noise should sound. Now, on the character select screen, move right of Raiden to pick him.

**Credit to..**
This guide has been compiled using data from various FAQs compiled by Christopher and Alan Tan, Orlando Benedicto and Tan Wu Meng. We tested their info and its nearly all sound, so they must truly be Virtual On Positive!

**Z-GRADT**
The monstrous final boss is armed with five weapons – Ring Laser, Chain Laser, Floating Mines, Phalanx and Mega-Laser cannon. He attacks with the first four weapons to start with. At this time he's surrounded by an energy field, making it hard to inflict any damage. After attacking twice with each set of weapons, he transforms into the golden Mega-Laser cannon. Now it is the time to strike, while its shield is low. Move in and use your most powerful weapon, following up with the right-hand weapon. Don't dash and make sure you don't get caught by the beam. Once the cannon stops, it reverts back to normal and the shield is raised again. Now dash away and await the second transformation. It's important to note that ZGRADT lowers its shield more times if it is badly damaged during the first transformation, so make it count!

**Players Guide**

- Jaguardandt under your control!
- Now you possess the 10-way laser!
- Normal view, plan view and side-on view. Enjoy!
OWN THE ULTIMATE GAMES MACHINE!

What's the most powerful games machine on the market at the moment? Saturn? PlayStation? Nintendo 64, surely? Well, in a word: no. It's the PC.

Over the past few months prices for Pentium PCs have come crashing down so if you're after the most versatile, graphically astounding machine around, there's only one serious choice. As Rich Leadbetter reveals...

We all know what the advantages of the PC over the consoles are: it's upgradable (you can change bits and pieces of your system to suit you), it can access the Internet easily, it can do spreadsheets and word processing, you can even program it. It also has some of the most astounding titles — videogame behemoths that the superconsoles just can't handle. It also has a fair smattering of the games that ARE available on console — and they're usually a whole lot better.

This feature presumes that you have between £1,000 and £1,500 to spend on a PC. At the lower price range you can expect to get a 120MHz Pentium with 16 megs of RAM, eight-speed CD-ROM (four times faster than Saturn or PlayStation's), hard drive, floppy drive — everything. You're looking at much the same spec for outlaying £1,500 — but with a top-end CPU to make everything whizz by at top speed.

BUILD IT OR BUY IT?

Open up a PC and you see that everything is in component form. A motherboard is at the base of everything and therein you plug the Pentium CPU and memory. From there you plug in your drives, sound card and graphics card. Because it's all modular, you can upgrade each bit as you please. That begs the question, should you buy your PC complete or assemble it? The main advantage with assembling it yourself is that you save at least, a couple of hundred quid, but it's not a task for the technically inept. Although pretty simple, if you're not up on your polarities and voltages, you're in deep trouble. So buy it ready made if you're in any doubt. You also get a guarantee there whereas if you build it yourself, your own handiwork is your own assurance of quality.

Everyone's selling PCs at the moment since it is the boom market (over 70% of all games sold are on PC). However, we recommend that you avoid the high street multiples like Dixons, Toys 'R Us and what-have-you. Although their machines are good, their prices are not so good. Instead, phone up suppliers like Dell or Gateway direct and ask for the best spec in your budget. Just to give you some ballpark figure to aim at, a friend of mine recently bought a Pentium Pro system (180 MHz) for £1,500. Where did he get this? From Gateway directly. I consider this a true Masters' deal and before I heard this I would have valued that particular system at least £2,000! Don't be afraid to haggle, get the lowest price and phone around again quoting that price and watch the companies fight it out for your cash. Save lots of dosh just by asking!

The one trap with buying a PC is that typically within 18 months something's on the market that's about three times more powerful than your system and costs exactly what you paid for your machine! There's very little you can do about this, because it's Intel's main way to leech tons of cash out of the market. Sooner or later people will get wise and it will stop, but I can't see it happening for years. However, I think that for games rather than upgrading your CPU (the most expensive bit), instead people will be going for video card upgrades built especially to work with 3D. It's happening now with two major 3D cards available in the US which take 3D performance to levels you'd never have believed possible. Even if this doesn't happen, and instead you're going to keep on upgrading your CPU (and usually the motherboard as well) it usually costs around £500 to buy the latest, greatest processor. Typically, the rest of your system shouldn't need to change — the sound card and memory are future-proof.

This is Prey - a 3D accelerated pretender to Quake's crown.

Gremlin's Realms of the Haunting: another ace PC game!

G Command and Conquer sequel which appears just as the first game hits the consoles!
THE FUTURE IS... 3D!

I guarantee that the first upgrade you’ll want for your PC is a decent 3D accelerator. If you see a game running on the PCI 3D Blaster or Descent 2 or the 3DFX, you’ll be amazed! N64-style mip-mapping and anti-aliasing are done with ease and an nifty N64 performance, believe it or not.

Every decent 3D accelerator out there at the moment is compatible with Windows 95 Direct3D. What this means is that 3D games running under Windows 95 will automatically detect your hardware and make the best use of it. This doesn’t mean that you’ll get the same performance with every accelerator, though. At the moment there are two major accelerator contenders:

1. RENDITION CHIPSET

The Rendition chipset powers the Creative Labs PCI 3D Blaster, but is also cropping up in a huge amount of 3D cards in the States. The 3D Blaster is about £180 here, but in the States you can pick up a card with the same chip for $129 (about 80 quid). This card replaces your current video card and is amazing value for money. Quake is utterly incredible, IndyCar 2 is stunning and tons of other games including Tomb Raider are coming out for it. On the minus side, it’s a bit crap at 2D applications and normal VGA games like Doom.

2. 3DFX CHIPSET

This 3D accelerator chipset (also known as the Voodoo chipset) isn’t out over here yet, but it is STUNNING. According to the software’s main programmer John Carmack rates this card higher than many $5000 graphics cards in its 3D capabilities. It’s superior to the Rendition in every regard except for the fact it’s about twice as expensive (in the US it’s $280). Also, it is used in tandem with your current video card (it doesn’t replace it as the Rendition does) which adds to the expense. The 3DFX is the current card of choice if you have the cash. It doesn’t have the software support at the moment, but once Direct3D on Windows 95 takes off completely, this will be the card to have...

You’ll need...

Software you should buy immediately for your PC: Windows 95, Quake, Command and Conquer: Red Alert and Tomb Raider. Another advantage of PC is that games are cheaper – all of the games mentioned can be bought in the shops for thirty quid!

Sounds great!

Because PC monitors typically don’t come with built-in speakers, you’re going to have to shell out for some. I’m extremely happy with my Yamaha speakers (cost: around sixty quid). They’re super-bassy and have outputs to put your sound through the optional sub-woofer (a bit hefty at around a hundred quid, but this is amazing sound). Typically, any multimedia speakers under fifty quid are a bit lackluster.

One of the most amazing 3D accelerated games is Tomb Raider on 3DFX. Super high-res at 30 fps with mip-mapping! Ace.

Without 3D acceleration, some PC games outperform the consoles. Like Realms of the Haunting.

Blocky and in low resolution. Indy Car 2 and Quake running at speed on an average Pentium system. Not that good really.

With the Verite 3D chipset, things run at twice the frame rate with N64 style effects like mip-mapping. Quake is bloody ace!
Having already proven it can do incredible 3D environments in its own unique style, the next step for N64 is to apply that power to more mainstream game types - and really show how advanced it is! While Wave Race features incredible water dynamics and the forthcoming Mario Kart R may well prove to have playability unmatched by any racer short of the Super NES original, gamers are still going to want a road racer with all the realism and cool of Ridge Racer and Sega Rally. And that's what Multiracing Champion promises to be!

SUPER-PRECISE STEERING

The steering sensitivity is always a crucial factor in a driving game. Of course, Multiracing Champion uses the analogue stick. It's worth bearing in mind that while Saturn and PlayStation racing games also take into consideration analogue controllers (be they steering wheels, the NeGcon or the NIGHTS pad), only the N64 has an analogue stick as standard - this game has been primarily designed for analogue steering! We've seen an early version of the game, however it was an unplayable rolling demo, so we're unable to comment on how it actually handles as yet.

The cars in Multiracing Champion look incredibly detailed, even at this stage.

The headlights come on as it gets dark!

If previous N64 games are anything to go by, we won't expect any clipping in this game.

One of the main features of Multiracing Champion is the ability to finely tune each car to suit your style. There are six cars in the game, each with different performance ratios (top speed, maximum acceleration, gear etc.) which can all be altered by changing various parts of your car. There are 7 machine settings to tinker with - steering responsiveness, spoilers for aerodynamics, gears for power or speed, or and off-road tyres, various strength brakes, front, rear or four-wheel drive, and soft or hard suspension. The idea is, once you've customised your car, you can save it off onto memory cart and load it onto your friends N64 to race their custom car!
ARE YOU ALRIGHT?

Bodywork damage - made famous in Daytona USA - is set to make an appearance in Multiracing Champion. From the pictures and rolling demo we've seen, this feature has yet to be included. However, the programming team at Genki have stated that it will only affect the car visually. No matter how dented your car gets, it won't suffer performance-wise.

On-and-off road terrain features throughout. Similar in many ways to Sega Rally.

KEEP IT UP!

Genki's 20-man team have spent over a year on the development of Multiracing Champion so far. And while there's still a lot to be done, they're confident about it, claiming it will be an 30 frames-a-second arcade-style racer like Sega Rally or Ridge Racer, only with the power of the N64. We'll keep you informed on its development.

THE FIRST COURSE

There are going to be three courses in the game. Currently only one track has been revealed - the Cassandra course. It's a good demonstration of what's in store, with a combination of on and off-road terrain. There's also different routes around the course and different weather conditions, including rain and snow. At one point there's even a broken bridge to leap across. Other neat features include a massive cliff wall which you can drive through while your opponents race overhead, and a long tunnel, whereupon the cars' headlamps come on!

Fancy lighting effects to match Rage Racer's setting sun!

Nintendo 64's anti-aliasing keeps all the textures looking smooth.

Racing under a waterfall! Crazy courses are what we want!
Acclaim's Turok was one of the first third-party games to be announced for the Nintendo 64. Based on the comic book of the same name, it stars Turok (a dinosaur hunter) in a first-person 3D shooting game set in and around jungles, or at least to begin with. The design of the levels and the intelligence of the enemies means that it doesn't play the same as Doom or Quake, with much more emphasis on exploring, making the encounters with enemies all the more frightening. The game's been in development for a long time now, but is nearing completion in time for its March release date. Here's our first detailed look.

RUN! RUN FOR YOUR LIFE!

Since the first version of Turok we saw last year, the controls have changed slightly. The four yellow C-Buttons move Turok forwards and backwards, as well as making him sidestep left and right, while the 3D Stick controls turning and looking up or down. The Z-Trigger is the fire button, and the R Shift makes Turok jump. The A and B buttons cycle through the selection of weapons, and L Shift brings up the overlayed map.

BIG GUNS!

3D first-person shooting games like Turok are getting more and more amazing selections of weapons each time, but none so far have been anywhere near as impressive as this! Those available range from the knife (which can be used even while swimming), through standard weapons and grenade launchers, to some of the most spectacular mega-guns ever!
NOT SUITABLE FOR PERSONS UNDER 65 MILLION YEARS

Some versions of Turok shown recently had green blobs of blood for all of the enemies, but that's now been changed to realistic-looking red. It's pretty violent now, and is likely to get an age warning sticker on the box when it's released, but we're sure that many of you will be very happy to see blood everywhere! There are also lots of gruesome ways for enemies to die as well, with some of them staggering and wriggling about before dying, and some having blood splatted up the walls. Yuk.

Shoot enemies in the neck, and they grab the wound with their hand while blood squirts out!

Enemies regenerate after a few seconds to keep players moving.

HOW TO CAPTURE A DINOSAUR

Acclaim's expensive motion-capture studios have been put to good use for Turok, making everything in the game move very realistically. The human enemies all walk, run, attack and die smoothly to add to the overall effect of the game. It works very well, and is something not used properly in a 3D shooting game like this before.

Some walls, like the one on the left, can be climbed!

CLEVER GIRL...

All of the enemies in Turok have some good artificial intelligence programming, meaning that they don't just stand around being shot like some other games. For a start, it's easy to be caught by surprise when playing Turok, as the enemies appear in different locations each time you play the game. Some dinosaurs are frightened by some of the human hunters, and will attack others. It's also pretty funny to have a native armed with a staff run towards you, then skid to a halt and run away when he sees what weapon you're firing at him!
Shadows of the Empire is a shoot-'em-up adventure which uses the N64's 3D power to recreate the sights of the Star Wars universe with an unprecedented level of detail. Do battle with AT-AT walkers on the snowy surface of Hoth. Take on a whole wing of Imperial TIE Fighters and TIE Bombers from the gun turret of your Corellian freighter. Jetpack across the chasms of Gall to track down the sinister Boba Fett. And explore the sinister sewers of Imperial City on the Empire's home world, Coruscant...

STAR WARS PART V (and a 1/2)

The events in Shadows of the Empire take place shortly after the destruction of Emperor Palpatine’s first Death Star. The Rebel Alliance’s main force has taken refuge on the ice world of Hoth and Darth Vader is leading an Imperial Navy task force there to seek out the Rebel ring-leaders. One of the Rebel’s holds special interest for him. Vader knows that Commander Luke Skywalker is his long-lost son, and therefore strong with The Force. He wants Luke taken alive so that he can be turned to the Dark Side and possibly presented to the Emperor as a new protege.

But there is another plan afoot. Unknown to Luke and to Vader, Dark Prince Xizor, freight magnate and boss of the powerful Black Sun crime syndicate, is also looking for young Skywalker. Xizor has been working hard to insinuate himself into Emperor Palpatine’s confidence and he is hoping to seize Vader’s position as the Emperor’s right hand. He is using his own vast resources to track down Luke and have him assassinated. Thus he will ruin Vader’s plan and, he hopes, discredit him in the eyes of the Emperor. Then he can take his place at the Emperor’s side. Diabolical indeed – but it is one man’s inescapable destiny to become embroiled in the scheme and put a stop to it...

even if he has to die in the attempt!

THE DASHING HERO

The rugged hero of Shadows of the Empire is Dash Rendar, smuggler, mercenary and – perhaps not surprisingly – old friend to Captain Han Solo. He plies his illicit trade across the galaxy in a modified Corellian freighter, The Outrider, with the aid of his droid co-pilot LE-BOZD9 (Leebo).

Rendar becomes unwittingly involved in Xizor’s plot when he lands on Hoth to deliver supplies to the Rebels. He runs into Solo who invites him to fight alongside the Rebel forces in an imminent battle. Rendar, whose ego prevents him from ever turning down a challenge, agrees and he is given a place in Commander Skywalker’s Rogue Squadron.

Little does Rendar realise that this chance meeting will cast him into the middle of a deadly plot which involves the a deadly conspiracy against the highest ranking agents of the Empire and the Rebel Alliance.

THE ADVENTURE BEGINS...

The story of Shadows of the Empire is told in four parts, which are further broken down into a total of ten game levels. The action in each level takes one of two basic forms.

There are four ‘space battle’ sequences in which you are piloting some kind of vehicle or Dash’s fighter, The Outrider. In these sections you get a 3D pilot’s-eye-view of the action, or, if you find it makes the ship easier to control, you can opt for an external view point. These sections make ample use of the N64’s ability to render complex, texture-mapped, three-dimensional objects, and they all look impressively realistic.

The remaining six levels are 3D exploration missions, reminiscence of games like Doom and, more especially, Dark Forces. Here you guide Dash through the dangerous interiors of starships and enemy bases, doing battle with unfriendly forces such as Imperial Storm Troopers and commandos. The enemy troops and your surroundings are also generated as three-dimensional models which look extraordinarily authentic.
PART ONE: 
THE BATTLE OF NORT

Dash Rendar volunteers to help save the Rebel Alliance from certain destruction on the ice world of Hoth. While the Rebels evacuate vital personnel from Echo Base, Rendar and the other members of Rogue Squadron among them Commander Skywalker - take on advancing Imperial ground forces. After the battle, Dash has to find his way back to The Outrider and escape into space - if he can!

Battle of Hoth: At the controls of a snowspeeder, Dash has to destroy Imperial probe droids, AT-ST scout walkers and the mighty AT-ATs! The AT-ATs have blaster-resistant armour, but Commander Skywalker suggests harpooning them using the snowspeeder’s tow cable gun. Get up close, fire the harpoon and circle the AT-AT to entangle its legs and force it to the ground. It’s a tricky stunt, but worthwhile for the chal-

Escape from Echo Base: The Imperial force has destroyed Echo Base’s main power generator, but not before most of the Rebel forces have escaped. Dash has been left behind and enters the base just in time to see the Millennium Falcon lift off. Unfortunately he can’t escape because the power loss has jammed the blast door to The Outrider’s hangar. Explore the base and find an alternate power source, but watch out for Imperial snowtroopers and vicious Wampas!

Asteroid Chase: The Outrider has made it into space, but before he can make the jump to light speed Rendar finds himself trapped between an orbiting Imperial Star Destroyer and an asteroid belt. Leedo takes the controls of the ship and Dash clammers into The Outrider’s gun turrets to see off the squadrons of TIE Fighters and TIE Bombers the Star Destroyer has launched. The bombers are the main threat but it takes time for them to launch their bombs so make sure you shoot first.

PART TWO: 
IN SEARCH OF BOBA FETT

Rendar hears that, following their escape from Hoth, Han Solo and his friends were captured by Imperial forces with the help of a bounty hunter called Boba Fett. Worse, Solo has been encased in carbonite and Fett is taking him to Jabba the Hutt. But a rival bounty hunter, also seeking the bounty on Solo, has forced Fett into hiding, and Dash heads to Ord Mantell Junkyard for information as to his whereabouts.

Ord Mantell Junkyard: Dash lands in a junkyard where he suspects the droid bounty hunter IG-88 is looking for spacecraft spares. To reach him, though, Dash has to ride magnetic trains which were designed to carry scrap metal and are rather dangerous to humanoid forms. Duck and jump over barriers, leap from car to car and from train to train as the tracks merge, but don’t fall off or you’re dead!
**PART THREE: HUNTING THE ASSASSINS**

Rendar defeats Fett, but with the aid of an Imperial escort the bounty hunter escapes aboard SLAVE-I. Meanwhile, somewhere above the planet Xizor is putting his plan into action and an assassin almost kills Luke Skywalker. Luke escapes and heads back to Tatooine where he plans to hide out for a while and hone his Jedi skills, but Princess Leia is concerned for his safety and asks Rendar to follow him.

**Moss Eisley and Beggar's Canyon:** In a cantina in the spaceport town of Mos Eisley, Rendar overhears a swoop gang planning the murder of Skywalker. He follows them outside and they head toward Beggar's Canyon on their speeder-bikes. Rendar mounts his own swoop and races through the streets of Mos Eisley after them. He has to trash each swoop rider before they discover Luke at the deserted house of Obi-Wan Kenobi.

**Imperial Freighter Suprise:** Rendar finds Luke safe and tells him that Leia is meeting with the Black Sun to find out who wants him dead. Luke reveals that the Black Sun have also given him the location of an Imperial freighter carrying secret plans. Suspicious, both men head for the freighter and Rendar goes aboard to find the plans. But the corridors of the freighter are guarded by stormtroopers and all sorts of electronic defence systems and making it through some parts of the ship demands brains rather than blasters.

**PART FOUR: LAIR OF THE DARK PRINCE**

Xizor's treachery is revealed when he captures Princess Leia and imprisons her beneath his palace in Imperial City on Coruscant. Luke, Chewbacca, Lando Calrissian and Rendar hurry to her aid, not realising that Lord Vader has also discovered Xizor's plan and that he is also on his way to confront his rival.

**Sewers of Imperial City:** Only way for Dash to reach Xizor's palace is via the Imperial City sewers, a network of tunnels which are heavily guarded by Coruscant's own guards. Making things even more hazardous are all the waste-disposal machines which are constantly chomping up the contents of the sewers into slimy goo. Rendar has to swim through that goo, though, and also fight off the attentions of the creatures that live in it.
**Xizor’s Palace:** Coruscant Guards, wall-mounted defence grids and Xizor’s own army of assassin droids are out to get Rendar as he stalks the opulent corridors of the palace looking for Xizor. It looks like he may have escaped aboard the space elevator that connects the palace to his Skyhook space station which is orbiting the planet. Dash has to try to destroy the elevator by placing three pulse charges in key locations on the elevator shaft. Be careful when jumping through the lift machinery!

**Skyhook Battle:** The final climactic battle! Our heroes lift off to attack the Skyhook in orbit – Luke in his X-Wing, Chewie and Lando in the Falcon and Dash in The Outrider. Again, Dash takes to the gun turret to see off a fleet of Xizor’s Star Vipers, then, as the ship approaches the Skyhook, he takes the helm and has to blast four gun turrets situated on the station’s arm structures. That done, all that remains is for him to fly into the superstructure and destroy the entire station by attacking its main reactor, Return of the Jedi-style!

---

**CHALLENGE POINTS**

Throughout the game you see these silver and gold Rebel Alliance insignia floating in mid-air. They are Challenge Points, so-called because you usually have to go to quite a bit of effort to get them, often opening secret doors or jumping up to precarious ledges. They are worth the trouble, though, because if you collect enough of them you’re rewarded with special bonuses at the end of the level such as extra lives. The more Challenge Points you find, the more bonuses you earn!

If you collect every Challenge Point in the game while playing on the Easy skill setting an extra feature is activated. Dash’s pal Leebo gives him a mapping device which shows the layout of the rooms around him – even if he hasn’t explored them yet – and also warns him of what he’s likely to find in them. There are other special bonuses to be had if you can collect all the Challenge Points when playing on the Medium, Hard and Jedi modes, but you’ll have to discover those for yourself!

---

**THE CONQUEST OF SPACE**

Shadows of the Empire really shows off the N64’s ability to create vast three-dimensional environments which don’t suffer from pop-up as you move through them. Devil’s advocates that we are, we tried to imagine what SOTE would look like on other machines, but it would be hard to expect any PlayStation or Saturn version to give you the same feeling of space as the N64 can. Everything seems so big! You can gaze down the chasms and cliffs on Gall and on any other machine they would be Z-clipped a short distance in front of your eye, but thanks to the N64’s graphic hardware, they just seem to go on forever. It really is awesome to look up at one of the spaceport towers on Gall or the huge pillars in Xizor’s palace and see them disappearing hundreds of feet above your head!

---

**Even More Shadows of the Empire!**

SOTE isn’t just a game, it’s a whole new episode in the Star Wars canon and LucasArts are currently throwing almost as much marketing muscle behind it as they would with a new movie. The Steve Perry novel was published last April 1, and since then Dark Horse have published a series of comics written by the co-creator of Judge Dredd, John Wagner, and drawn by John Ridgway. There are also card games and other SOTE paraphernalia on the way, so watch out for it! Check out the Shadows of the Empire web site at http://www.lucasarts.com/static/home/sote/sote.htm.

**NEW GAMES**

*Stand by for a free download of cool images like this from LucasArts.*

*Feels like you’re there. Players may adopt almost any eye view they wish for explorations such as this, in Beggar’s Canyon.*
DIGITAL DANCE MIX

Sega's AM2 R&D team. Think ultra realistic 3D fighting action! Think monster amazing stylish racing cars! Think... Namie Amuro?

This is a news story too good to lay low. After months of red-hot rumours as to what AM2's Christmas companion to Fighters MEGAMIX would be, we didn't even come close. Nobody tried 'idol' speculation however, which at least would have been on the right track. Not Virtua Cop Kids, or Racing MEGAMIX (a popular suggestion) - AM2's killer ap for Christmas is Digital Dance Mix - the nearest Saturn is likely to get to Make My Video!

MAD ABOUT NAMIE AMURO

19-year-old Namie Amuro is one of Japan's leading female recording artists. She made her debut in 1992 with a band called the Super Monkey's who she still tours with today. Solo since the age of 17, Namie's latest album, Sweet 19 Blues, sold 8.6 million copies in its first week of sale last July, breaking the world record for the fastest selling album in history! Namie Amuro singles have sold in excess of six million copies! Millions of female fans dress like Namie, and practice her dance routines in the clubs. Some are so obsessed that they have earned the nickname 'Amuraa' - a variation of the term 'Shanelaa', referring to women whose favoured attire is Chanel fashions. Needless to say the male population adore her too.

AM2 - MAD?

It is to these legions of fans that AM2, producers of Sega's biggest titles, that Digital Dance Mix is hoped to appeal. If only 10% of the Namie Amuro fanbase are impressed by a 'game' starring their favourite idol, that's a guaranteed 800,000 sales. And that's before considering whether Digital Dance Mix is worth playing! But surely AM2 won't let us down. Here's what we know of DDM so far:

A detailed, 3D polygon model of Namie appears on a psychedelic screen, accompanied by water fall, monotone dancers. Currently the only confirmed tracks are 'Chance the Chase', and 'You're My Sunshine' (two massive hits for Amuro). The player adopts the role of director positioning a virtual camera through 360° to find the best angles - zooming in and out for extra dramatic effect!!! Those background designs can be changed. The dancers can be repositioned too. There's even a selection of funky outfits in Namie's wardrobe! Dance Mix uses the Saturn's highest resolution to ensure that Namie is presented to her best advantage. When asked for her opinion of DDM, Namie is quoted as saying: 'This is great isn't it. It's myself while at the same time it isn't myself. It's a strange feeling but it's really fantastic. I'll be able to check what I look like now [laugh].

CAN WE DIG IT?

Digital Dance Mix should be out now in Japan - its release is scheduled for January. The title is only available through convenience stores, and is priced really low at 2800 Yen (approximately £20). Of course there's hardly any chance of it being released in the UK, unless Sega can persuade the Spice Girls to have a go. But, hey, we wouldn't like to put thoughts into your head. Remember, you read the first UK Namie Amuro feature here first. If you want to find out even more, check her official Website - AM-GLAM - here: www.amuro.com.
USE IT OR LOSE IT.

Uncontrollable.
Image overload.
Violence junkie.
